The Australian Stock Exchange Ltd.

Dear Sir

Re: Preliminary Drilling Results – Copper Project

At the Las Pascualas porphyry copper project in Chile, in which the Company has a direct and indirect interest of 61%, the first six holes of a reverse-circulation drilling programme have been completed.

All six holes intersected the target zone. This zone varies between 30-50 metres in thickness but one hole appears to have 100 metres of mineralization. Further details will be released upon receipt of assay results.

Yours faithfully
INVESTIKA LTD.

J B MAGUIRE
COMPANY SECRETARY
