Engin and Nokia announce Australia's first Mobile Internet Phone

Engin Internet phone calls go mobile on Nokia N80 providing 10c untimed calls across Australia

Sydney, Australia – 22 January 2006: Engin, Australia's leading Internet Telephony company and Nokia, Australia's most popular mobile phone brand today announced a breakthrough for consumers seeking low cost mobile phone bills. Through a collaboration between the two organisations, Engin customers will now be able to make cheap Internet phone calls using the first Mobile Internet Phone to be released in Australia, the Nokia N80 Internet Edition.

As the pioneer of Internet Telephony in Australia, Engin is the first to offer a wireless Internet Phone (otherwise known as "VoIP") service for Australian mobile phone users providing significantly reduced mobile phone bills for Engin customers. Engin's new service complements existing GSM/WCDMA service by making use of WLAN broadband wherever it's available.

Making Internet phone calls with the Nokia N80 Internet Edition is as easy as making a traditional phone call. "People are increasingly using Internet Telephony to dramatically reduce the cost of their home and business phone bills. Now we can offer them the same savings breakthrough on their mobile phone. Already more than one in four people are regularly using their mobile devices to access the Internet, which shows that the mass market is recognising the value of convergent devices. With the Nokia N80 Internet Edition, you can seamlessly blend together surfing the web and making cost-efficient Internet calls" said Ilkka Tales, CEO of Engin.

"With the proliferation of WiFi hot spots in the home, office and public areas, people have increasing access to use the Nokia N80 to make calls, no matter where they are, over the Engin network at our low cost call rates," added Tales.

"You can literally be in a public space, connected to a WiFi hotspot and make 10 cent untime calls to landlines around Australia, and 20 cent untime calls to 20 countries around the world," he continued.

David Watkins, Director, Multimedia Sales APAC, Nokia, said, "Convergence is bringing more opportunities for consumers and Nokia's Nseries opens up the possibilities of the Internet going mobile. Engin's VoIP Internet Phone service is a great example."

"As a multimedia computer, the N80 Internet Edition is a powerful pocket-sized device which makes it easy for consumers to choose the wireless connectivity that best suits their needs," Watkins said.

Nokia N80 Internet Edition brings together wireless LAN (WLAN), a robust browser, support for Internet calls, a 3-megapixel camera, and quadband GSM/WCDMA coverage and a host of other Internet services not previously installed together on Nokia devices.

Engin offers home users average savings of up to 55 per cent on their monthly phone bills with low cost call rates for as little as 10 cents untime, anytime locally and nationally, calls to mobiles from 20 cents per minute and international calls from 20 cents untime, anytime to selected international destinations on Engin's new World 20 Plan. Calls between Engin users are free of Engin charges.

The Engin Mobile Wizard is available from Engin for easy configuration of the Nokia N80 Internet Edition. Please call Engin on 1300 305 000 for full details. The Nokia N80 Internet Edition is available for \$1,049 RRP at leading mobile phone retailers.

About Engin

Engin, listed on the ASX (ENG), is the first Internet Telephony service to be broadly available to Australian consumers and businesses on the shelves of major retailers. Engin is headquartered in Sydney, Australia and was granted its telecommunications carrier license in March 2004 to deliver a digital voice service across existing broadband connections. Winner of the ATUG Best Communications Solution – Small Business 2006 award and the 2005 iAwards AIIA communications category, Engin provides affordable telecommunication alternatives for all Australian consumers and businesses.
