ASX ANNOUNCEMENT

23 August 2007

COFFEY MINING BEGIN KYRGYZ ZINC/LEAD MINE AND DEPOSIT ASSESSMENT

Coffey Mining Pty Ltd ("COF"), formerly RSG Global Consulting Pty Ltd, have now commenced the on-site assessment of Linia Prava Uranium's ("LPU") Lead/Zinc mine and deposit in Kan, Southern Kyrgyzstan. LPU is Nimrodel's ("NMR") 100% owned Kyrgyz subsidiary which has uranium and lead-zinc license areas in south-western Kyrgyzstan, covering an aggregate area of approx. 3,700 square kilometres.

Mined from 1958 to 1973, Soviet documentation suggests that significant resources may remain at the site, though these will require definition according to modern industry standards if they are to be exploited.

To achieve this aim, COF are now carrying out a physical inspection of the mine, deposit and tailings dams together with a detailed investigation of historical records. This work will include field checking of existing maps, remapping and extensions to mapping being undertaken as required. Evaluation of the established geology of the deposit will be completed in Perth.

A prioritised program for recommended future exploration will subsequently be established.

It is expected this work will be completed by end- September 2007
