

Jaguar Ships First Concentrate

Jabiru Metals Limited (Jabiru) is pleased to advise that the first load of concentrate has now been shipped from the Geraldton (WA). The shipment of approximately 5,400 tonnes (wet) of zinc concentrate left the port on 12th October bound for China.

The concentrate was shipped from Oxiana Ltd's (Oxiana) Geraldton port facilities. Jabiru's agreement with Oxiana has provided significant marketing and shipping advantages resulting in a ready market for our concentrate at highly commercial terms as well as efficient loading and shipping processes.

This accomplishment early in the ramp-up phase of the Jaguar operation is a further achievement and highlights the readily saleable nature of the Jaguar concentrate produced as well as the value of our arrangement with Oxiana.
