Quarterly Report December 2008

HIGHLIGHTS

Southern Ashanti Gold Project (SAGP) – NOW PERMITTED

- Approval of the Environmental Permit by the Environmental Protection Agency (EPA) of Ghana. Adamus has now received all approvals required to commence mining at the SAGP.
- Further results from Deeper Drilling at the Salman Central / South project area confirm the excellent potential to significantly extend the know mineralisations to depths well below the current shallow 50 – 80 metres from surface.
- Interim cost containment measures implemented in line with current market conditions.

Corporate

- During the quarter Adamus secured a \$5 million convertible loan facility from Macquarie Bank Limited. This will serve as an interim measure until Adamus commits to a full project finance facility to develop its SAGP.
- Adamus earlier raised funding through the private placement of 3.4 million shares to Resource Capital Funds at a price of \$0.30 per share.

For personal use only

Overview

Adamus took a major step towards commencement of mining at its SAGP in Ghana with the awarding of the Environmental Permit by the Environmental Protection Agency of Ghana (EPA) on 16 December 2008.

The approval of the Environmental Permit follows extensive baseline environmental studies, which formed the basis of the Environmental Impact Statement, along with extensive community consultation programs and public hearings. Local communities will continue to be kept informed of and educated on environmental issues, as well as project status.

The permit means that Adamus has now received all approvals required to commence mining at the SAGP. The draft Fiscal Stability Agreement remains with the Minerals Commission for approval, however a Ghana Government letter of support (comfort letter) has been issued confirming certain fiscal concessions will be available for the project development, including import and excise duty exemptions. It is intended to finalise the Fiscal Stability Agreement in the first quarter of 2009.

Ghanaian elections were held during the latter part of the quarter reconfirming Ghana's commitment to democratic government.

A Ghanaian company was awarded the contract for design, planning and site engineering of Phase 1 of the Salman village resettlement.

Highlights of Exploration

Continued exploration success at SAGP tenements during the period, including:

- Deeper drilling results at Salman significantly extended mineralisation well beyond current mineral resource
- Structural study of Anwia revealed depth potential
- Anwia geotechnical holes revealed excellent intersections

Exploration Activities - Summary

Exploration at the SAGP continued during the quarter with soil geochemical traverses, plotting and interpretation of the recently completed Diamond and RC drill programme data and a structural study of the mineralisation at Anwia. Other field exploration slowed in preparation for the upcoming wet season. As highlighted in the previous Quarter, geological interpretation of the excellent results from below the current Salman North and Teberu pit areas continued to confirm the structural model of the Salman Trend that indicates both depth and strike extensions to the current mineralisation can be expected along the majority of the Trend. This is especially so in areas where the sub-vertical phyllite / greywacke boundary “rolls over” at depth. These areas will continue to be the target for future Salman exploration.

Sampling of a previously unsampled geotechnical hole from Anwia provided several significant intersections.

Deeper Drilling Salman

During the Quarter, the Company announced further results from the deeper drilling at the **Salman Central / South project area**. As with the previously reported initial results, these new results again confirmed the excellent potential to significantly extend the known mineralisation to depths well below the current shallow 50 - 80 metres from surface.

This drilling was targeted at extending the base of mineralisation up to 50 - 100 metres below the current mineral resource. Results received to date successfully extend the known mineralisation. A significant result of **20 metres @4.8g/t from 64m** in hole SNRC885 on section 551550N at the southern end of the deposit indicates a substantial zone of mineralisation at depth below lower grade zone near-surface mineralisation.

The intersection supports the structural theory that the current mineralisation plunges to the south and this hole has intersected that zone. This is further supported by an intersection of **16m@2.42g/t** on the section 25m north which also intersected the same zone but closer to the surface.

All of the sections under the recent drilling and the majority of sections along the remainder of Salman South / Central remain open at depth. Importantly, these deeper (yet still shallow) holes further confirm the results of the recent structural study of the Salman Trend. As a result, it is predicted that the extension of mineralisation below the southern end of the Trend may be repeated at the other 8 northern deposits spread along the 7 kilometre length of the Salman Trend.

See Appendix 1 for table of significant intercepts.

Anwia Structural Study

Field studies of the structural environment at Anwia were completed during the quarter by Dr Greg Cameron. The study identified that there is a strong supergene control on the “flat” quartz veins and that these veins were emplaced after a steeper higher grade vein set. The vertical set is expected to extend to depth. The results to date auger well for the further exploration potential of the area. A final report on the study is expected during the current quarter.

Results were also received for 2 geotechnical holes drilled in 2007 that were not sampled at the time. The results (available as Appendix 2) confirm both the presence of the nearer surface flat veins and unexpectedly, steeper, deeper quartz veins which were intersected in hole AWRC096.

Soil Geochemistry

Regional soil geochemistry programs have continued in both the north and east of the SAGP project areas. Results from the previous Quarter of sampling have produced numerous zones of anomalous geochemistry with results of over 1500ppb having been obtained from discrete zones. These areas are planned to be mapped in detail and trench sampled to further delineate the source of mineralisation.

Project Development

The following work was undertaken during the quarter :

Feasibility Model Review

Updates to the feasibility model have been completed to reflect current commodity, fuel and power prices. Results are currently being analysed.

Plant Options

Adamus has continued to assess opportunities for suitable used CIL processing plants and components as an alternative to the use of new equipment which was assumed in the Feasibility Study. More recent primary focus has been in Australia in view of the current exchange rates.

Power Options

Adamus continues to study cheaper alternative power options including coal. An initial survey of the power route and suppliers has taken place.

Ministerial Approvals	Q1 2009

On Ground Activities – Ghana

Adamus is aware of its responsibility as an agent of sustainable development and aims to be an active and committed partner in the communities where we live, work and conduct business.

Education and discussion with community stakeholders regarding the development of the SAGP, most specifically in regard to environmental issues continued. Consultation included local radio announcements, distribution of background documentation, a series of information sharing meetings with key stakeholders and all residents, establishment of community notice boards and focus group discussions. More than 125 community members attended workshops held to discuss the Environmental Impact Statement (EIS) which includes provision for ongoing consultation, the development of resettlement package agreements and the training and development of local infrastructure.

Adamus further continued its commitment to the development of the catchment communities affected by the SAGP. To this end a number of projects were undertaken and donations of goods and services made including the provision of power poles to Akango, cement to Kikam for the building of a community library and gifts for Kundum Festivals throughout the area.

Design concepts for the Salman resettlement are currently being analysed and reviewed. Once preliminary information is validated, conceptual designs for the new village layout will begin.

The year 2008 heralded successful resettlement negotiations, completion of 2008-2009 Acreage Crop Rate Review, undertaking 5 mine tours within other communities, completion of Salman, Akango

and Teleku Bokazo RAP's, completion of EPA public hearings at Salman and Teleku Bokazo, EIS education, and renaming of the Southern Ashanti Gold Project into Nzema Gold Operations to recognise the local people.

About Adamus

Adamus Resources Limited is a Perth-based mineral exploration company, listed on Australian Securities Exchange (ASX), TSX Venture Exchange (TSX-V) and Frankfurt Stock Exchange Open Market (FSE).

The Company's primary focus is on exploring, realising and expanding the economic potential of the Southern Ashanti Gold Project in Ghana, West Africa. The Project encompasses approximately 626km² of tenure in the Ashanti Gold Belt – host to over 100moz of gold and the Project boasts excellent access to port and road infrastructure. Ghana is a stable West African country with a long history and some of the world's largest gold mining operations. Gold production is vital to the national economy. Members of the Adamus Board and management team have proven records in mineral exploration, project development and project financing.

Managing Director/CEO

Information in this announcement pertaining to exploration results and mineral resources was compiled by Ron Heeks, an employee of Adamus Resources Limited, who is a Member of The Australasian Institute of Mining and Metallurgy and has more than 5 years experience in estimation of recoverable resources in gold deposits. He qualifies as a "Qualified Person" under Canadian National Instrument 43-101 – Standards of Disclosure for Mineral Projects. Ron Heeks has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a "Competent Person" as defined in the JORC Code. Ron Heeks consents to the inclusion in the announcement of the matters based on this information in the form and context in which it appears.

The TSX-V and ASX do not accept responsibility for the adequacy or accuracy of this release. No stock exchange, securities commission or other regulatory authority has approved or disapproved the information contained herein.

Caution Regarding Forward Looking Statements.

Statements regarding Adamus' plans with respect to its mineral properties are forward-looking statements. There can be no assurance that Adamus' plans for development of its mineral properties will proceed as currently expected. There can also be no assurance that Adamus will be able to confirm the presence of additional mineral deposits, that any mineralization will prove to be economic or that a mine will successfully be developed on any of Adamus' mineral properties. Circumstances or management's estimates or opinions could change. The reader is cautioned not to place undue reliance on forward-looking statements.

Notes

- 1) RC samples collected in 1m intervals and riffle split. Half sawn HQ diamond core submitted for assay.
- 2) Assaying conducted by Transworld Laboratories, Tarkwa, Ghana using industry standard 50g lead collection fire assay with AAS finish.
- 3) Reference standards, field duplicates and blank samples are routinely inserted at 1:20 and assays of quality control samples are routinely monitored.
- 4) Assays are reported within the limits of 0.01g/t analytical precision.
- 5) Lower intersection cut-off grade 0.5g/t Au,
- 6) Maximum included internal dilution 2m.
- 7) * RC drillhole with diamond tail
- 8) **Diamond hole.

Financing facilities available

Add notes as necessary for an understanding of the position.

	Amount available \$A'000	Amount used \$A'000
3.1 Loan facilities **	5,000	1,000
3.2 Credit standby arrangements		

**The Company has secured a \$5m convertible loan facility with Macquarie Bank Limited, which was announced on 4 December 2008.

Estimated cash outflows for next quarter

	\$A'000
4.1 Exploration and evaluation	-
4.2 Development	750
Total	750

Reconciliation of cash

Reconciliation of cash at the end of the quarter (as shown in the consolidated statement of cash flows) to the related items in the accounts is as follows.	Current quarter \$A'000	Previous quarter \$A'000
5.1 Cash on hand and at bank	140	2,473
5.2 Deposits at call	1,097	-
5.3 Bank overdraft		
5.4 Other (provide details)		
Total: cash at end of quarter (item 1.22)	1,237	2,473

Changes in interests in mining tenements

	Tenement reference	Nature of interest (note (2))	Interest at beginning of quarter	Interest at end of quarter
6.1		Interests in mining tenements relinquished, reduced or lapsed		
6.2		Interests in mining tenements acquired or increased		

+ See chapter 19 for defined terms.

Appendix 5B
Mining exploration entity quarterly report

Issued and quoted securities at end of current quarter

Description includes rate of interest and any redemption or conversion rights together with prices and dates.

	Total number	Number quoted	Issue price per security (see note 3) (cents)	Amount paid up per security (see note 3) (cents)
7.1 Preference securities <i>(description)</i>				
7.2 Changes during quarter (a) Increases through issues (b) Decreases through returns of capital, buy-backs, redemptions

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 1022: Accounting for Extractive Industries* and *AASB 1026: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
