ASX Release – 8 April 2010

KYRGYZSTAN UPDATE

Nimrodel Resources Limited ("Nimrodel") (ASX Code: NMR) unfortunately announces the occurrence of violent political protests in Kyrgyzstan over the past 2 days.

Nimrodel holds significant licences in Kyrgyzstan prospective for both uranium and gold.

We are pleased to confirm the safety of all our dedicated staff in the Kyrgyz capital of Bishkek. Our first priority is to these Nimrodel people on the ground and to that end we have suspended all fieldwork until the current situation is resolved. We are in regular contact with Bishkek and reports from our local team, as announced on local Kyrgyz radio, indicate that the Executive Committee has taken control and President Bakiev has fled the capital.

At this stage it is too early to predict the conclusion of this political upheaval. As soon as the Company is in a position to confirm the future of our exploration work in Kyrgyz, we will make a further announcement.

About Nimrodel

Nimrodel Resources is an international exploration company which is developing a portfolio of highly prospective, uranium, precious and base metals projects in Kyrgyzstan and Australia. The Company has three core projects: the Batken Province and Tyuz-Ashuiskaya Projects in Kyrgyzstan and the Buckaroo Project in Australia.

The Batken Oblast Uranium Project (1,946 km²) encompasses a highly prospective area with geology similar to that of the Mailuu-Suu Uranium Mine, which historically produced approximately 10,000 tonnes of high-grade uranium. The leases are in the Fergana Basin, within 10km of an existing uranium plant at Hojent in Tajikistan and within 45-100kms of former Soviet uranium mines, including Mailuu-Suu and Tuya Muyun.

The Tyuz-Ashuiskaya Gold Exploration Licence (72 km²), which is located in the gold-rich Chatkal region of Western Kyrgyzstan, is an under-explored area which includes the Saraysay-Tyllyaberdy gold deposit – a 7.5 kilometre long zone of surface gold mineralisation. Based on historical information including extensive surface trenching results, the Company considers that there is potential to define a substantial gold resource of over 500,000oz of high-grade gold at grades in excess of 5g/t Au.

The Buckaroo Gold/Copper Project (611km²) is situated in Central New South Wales, approx. 80 km east of the operating mining district of Cobar. It covers greater than a 20km strike length of the highly prospective Girilambone Group sediments which host the high grade Girilambone and Tritton copper deposits.
