BOARD:

Denis O'Meara: Chairman
Justin Brown: MD
John Ribbons: Non-Exec

KEY PROJECTS:

PEAK HILL (100%)
Gold

DURACK (earning 85%)
Gold, Copper (VMS)

BUTCHERBIRD (100%)
Manganese, Copper

MT PADBURY (100% of gold)
Gold, Manganese, Iron

KEY SHARE HOLDINGS:

AUVEX RESOURCES LTD
7,500,000 FPO Shares

BUXTON RESOURCES LTD
3,010,000 FPO Shares

Note: Unless otherwise stated,
all drill intersections are reported
as down-hole widths.

HIGHLIGHTS

BUTCHERBIRD WEST (MANGANESE):

- Drilling confirms large tonnages of beneficiable manganese mineralisation.
- Best Results include;
 - 10BBRC028: 16m @ 12.50% Mn from surface
 - 10BBRC054: 15m @ 11.61% Mn from surface
 - 10BBRC006: 24m @ 9.38% Mn from surface
- Results to date support at Bindi Hill support an ****Exploration Target of 20-30 Mt @ 8-15%** manganese. Excellent potential to exceed this with further drilling

BUTCHERBIRD EAST (MANGANESE):

- Drilling confirms additional large tonnages of beneficiable manganese mineralisation.
- Best Results include;
 - 10BBRC185: 19m @ 11.89% Mn from 2m
 - 10BBRC127: 22m @ 12.28% Mn from surface
 - 10BBRC130: 10m @ 14.61% Mn from surface (including 6m @ 18.58% Mn)
- Results to date support an ****Exploration Target of 80-100 Mt @ 10-15%** manganese at two of four key targets. Excellent potential to exceed this with further drilling.
- 9,000m RC and DD drilling programme commencing mid-October 2010 to support maiden JORC Resource Estimate.

BUTCHERBIRD EAST (COPPER):

- Results include;
 - 10BBC01: **4m @ 6.97% Cu**, 566ppm Co
 - 10BBC05: 4m @ 1.52% Cu, 140ppm Co
- The copper mineralisation has a strong associated cobalt, lead and zinc mineralised halo.
- System appears to be a shear hosted polymetallic deposit with significant potential requiring follow up work.
- Airborne EM programme currently being planned over several manganese targets will also test this feature.

***It should be noted that the potential quantity and grade is conceptual in nature, that there has been insufficient exploration to define a Mineral Resource, and that it is uncertain if further exploration will result in the determination of a Mineral Resource.*

BUTCHERBIRD (100%)

The Butcherbird Manganese and Copper project straddles the Great North Highway approximately 120km south of Newman. Reconnaissance surface sampling initially highlighted extensive surface manganese enrichment associated with supergene weathering processes.

RC drilling to test the targets defined from surface work has confirmed the potential for the Project to host large tonnage, beneficiable manganese mineralisation.

The work to date has identified six primary target areas, two of which have been targeted for extensive infill drilling during the coming Quarter. Further regional exploration is also being undertaken to define additional manganese deposits within the Company's tenure.

BUTCHERBIRD WEST

RC Drilling

Drilling results from the phase 1 drilling at the Bindi Bindi Hill, Alcoa Hole and Cadgies Flats manganese Prospects within the Butcherbird manganese/copper project were received and compiled during the Quarter. The programme comprised 90 holes for 3,132m.

The drilling and associated preliminary metallurgical testing results have confirmed the presence of broad areas of beneficiable manganese material starting at surface and extending over significant mineable widths of 5-24m.

The work completed to date supports an ****Exploration Target potential at Bindi Bindi Hill of 20-30 Mt at 8-12% Mn**. Beneficiation test work completed so far suggests that the material can be beneficiated by crushing, screening and dense media separation and work is ongoing to further refine this process.

***It should be noted that the potential quantity and grade is conceptual in nature, that there has been insufficient exploration to define a Mineral Resource, and that it is uncertain if further exploration will result in the determination of a Mineral Resource*

For personal use only

Figure 1. Plan view showing completed drillhole locations, selected RC composite intersections and prospect locations at Butcherbird (west). Individual assays are from 1m splits, using fused disc XRF analysis.

At Cadgies Flat the mineralisation is somewhat thinner, at around 5m but some very high grades have been returned from rock chips in this area and based on mapping since the first pass drilling was completed, we now believe that the best areas have yet to be drilled

Table 1. RC Drilling results from the Bindi Bindi Hill, Alcoa Hole, and Cadgies Flats Prospects within the Butcherbird Project area. Composite results shown from geologically constrained zones and a bottom cut of approximately 6% manganese. Assays are from 1m splits using XRF fused disc analysis.

Rock Chip Sampling

Further surface sampling has been undertaken over potential new areas and the results continue to highlight the extensive surface manganese at Butcherbird. The data show a potential extension to the target area at Bindi Bindi Hill and have also identified a new target area at Bilby Hill to the southeast.

BUTCHERBIRD EAST

RC Drilling

During the Quarter, drilling results were also received in relation to the RC drilling programmes at the Yanneri Ridge, Budgie Hill, Ilgararie Ridge and Ilgararie Hill manganese Prospects within the Butcherbird manganese/copper project. A total of 67 holes were completed for 2,376m.

The drilling results further confirmed the presence of additional broad areas of beneficiable manganese material starting at surface and extending over significant mineable widths of 5-28m.

All four target areas are priority targets with the potential to yield significant tonnages of manganese ore. In all cases, mineralisation is open along strike and down dip, with cross sections showing very consistent mineralised horizons starting at or near surface.

BENEFICIATION TESTING

Beneficiation testing conducted during the Quarter yielded encouraging first pass DMS beneficiation test results for composite material sampled from recent drilling at the Budgie Hill and Yanneri Ridge Prospects at the Butcherbird manganese project.

Grades of up to 37.65% have been achieved using a separation Specific Gravity (“SG”) of 3.4, with favourable values for both phosphorous and iron, two key impurities in manganese ore. Work is ongoing to further investigate and refine the beneficiation behaviour of the material. Results to date are shown in the table below.

The work completed to date continues to define large tonnages of manganese material and beneficiation test data continues to show that the material from a number of identified deposits can be upgraded to commercial grades using routine techniques.

Table 4. Table 1: XRF assay values of DMS fractions at 3.4 SG. Analyses was performed on the >1.18mm fraction. Yield % values for each composite are calculated from mass recoveries. Composites which yielded concentrate grades >30%Mn are shown.

5 drill holes were selected for DMS test work. Each hole was further subdivided into approx 5m benches, based on geological boundaries. Each bench comprises 1m drilled intervals composited by the test lab.

Each Composite was screened at 1.18mm to separate out the fines fraction, which comprises weathered clays and finely pulverised rock material. The composites were then crushed to achieve a grain size of between 1.18mm and 6.7mm.

The feed material was run through the Dense Media Separation Cyclone at a SG. of 3.4. The DMS Concentrate material comprises rock chips with SG.'s greater than 3.4, while the DMS Tail constitutes material with SG.s lighter than 3.4.

The Concentrate and Tails were analysed using Fused Bead XRF to determine grades as reported.

The fines fraction was not assayed due to the high clay contents.

All testwork was undertaken by Nagrom, with specialised equipment suited to this small scale DMS study.

Figure 4. Composite 208-2, DMS Tail on left, DMS Concentrate on right.

TONNAGE POTENTIAL

Based on the work to date, Exploration Target ranges have been determined for several of the manganese deposits at Butcherbird as follows.

Prospect	Exploration Target	
	Tonnage Potential	Grade Estimate
Yanneri Ridge	40-50 Mt	10-15% Mn
Budgie Hill	40-50 Mt	10-15% Mn
Bindi Bindi Hill	20-30 Mt	8-12% Mn
Ilgararie Hill	Insufficient Drilling	
Ilgararie Ridge	Insufficient Drilling	
TOTAL**	100-130 Mt	8-15% Mn

Table 5. Butcherbird Exploration Target size estimates for zones drilled to date.

***It should be noted that the potential quantity and grade is conceptual in nature, that there has been insufficient exploration to define a Mineral Resource, and that it is uncertain if further exploration will result in the determination of a Mineral Resource*

WORK PROGRAMME GOING FORWARD

The consistency of grade, low stripping ratios, positive beneficiation behaviour, excellent infrastructure and large size underpin the Company's strategy to rapidly develop the Project. Drilling will now be accelerated to provide the required data for a scoping study which will investigate the commercial and logistical hurdles to near term development of Butcherbird as a significant manganese producing operation.

RC and Diamond drilling is scheduled to re-commence mid-late October 2010 and will also support more definitive metallurgical testing which is expected to yield better recoveries and potentially higher beneficiation grades than the work completed to date on RC chips. The drilling will also support a maiden JORC Resource Estimate over selected mineralised zones.

BUTCHERBIRD COPPER

The maiden drilling programme at the historic Butcherbird copper mine was completed during the Quarter, with the assays returning encouraging high grade copper results from the oxide zone beneath the small scale historic shafts.

The drilling programme comprised a total of five RC holes for 470m, targeting sulphide mineralisation beneath the surface oxide expression, however an intrusive dolerite may have truncated the mineralisation at this location so no true primary sulphide material was intersected.

The tenor and poly-metallic nature of the results however suggest that the shear hosted mineralisation represents a target with significant potential, further supported by an approximately 4km long interpreted host structure defined in the regional aeromagnetic data.

Figure 6. RC Drilling chips for 10BBC01 showing strong copper oxide mineralization 16-20m downhole.

The success of this first drilling programme has enhanced the prospectivity of the target and follow up work is currently being planned, including an airborne EM survey to attempt to define a sulphide body beneath the surficial oxide expression.

The tenor of the copper values and leaching properties suggested by the behaviour in the laboratory indicates the potential for a heap leach operation should sufficient tonnages of oxide material be defined by follow up drilling. The primary target however remains the sulphide mineralisation at depth which will be the focus of the geophysical work and deeper drilling in the next programme.

Table 7. Significant assays from recent drilling at the Butcherbird copper mine. Intervals with copper grades in excess of 0.1% are shown. All samples are 1m metre intervals assayed by Aqua Regia digest with AAS finish. These results have also been confirmed by mixed acid digest analysis.

PEAK HILL (85-100%)

Gold Production

Gravity processing of old mill site material has continued to yield important gold production from the Peak Hill site.

Montezuma has in place a Tribute Mining Agreement with Resource Gold Pty Ltd ("RGL") to process suitable material from within the Project using RGL's gravity plant. All costs and environmental liabilities are carried by RGL and Montezuma receives 25% of all metal produced.

Work during the quarter has produced a total of 316.51 ounces of gold and 25.54 ounces of silver, from the sale of which Montezuma received 25% of total proceeds.

The cash-flow generated by the gold processing programme will help to fund accelerated exploration at Peak Hill and the surrounding tenure as well as at the company's exciting new copper/manganese project at Butcherbird to the northeast.

Mobile: +61 438 745 675

The Information in this report that relates to exploration results is based on information compiled by Justin Brown, who is a member of the Australian Institute of Mining & Metallurgy. Mr Brown is a geologist and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Justin Brown consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

Appendix 5B

Mining exploration entity quarterly report

Introduced 1/7/96. Origin: Appendix 8. Amended 1/7/97, 1/7/98, 30/9/2001, 01/06/10.

Name of entity

Montezuma Mining Company Limited

ABN

46 119 711 929

Quarter ended ("current quarter")

30 September 2010

Consolidated statement of cash flows

Cash flows related to operating activities	Current quarter \$A'000	Year to date (3 months) \$A'000
1.1 Receipts from product sales and related debtors	106	106
1.2 Payments for (a) exploration & evaluation	(955)	(955)
(b) development	-	-
(c) production	-	-
(d) administration	(231)	(231)
1.3 Dividends received	-	-
1.4 Interest and other items of a similar nature received	88	88
1.5 Interest and other costs of finance paid	-	-
1.6 Income taxes paid	-	-
1.7 Other (provide details if material)	-	-
Net Operating Cash Flows	(992)	(992)
Cash flows related to investing activities		
1.8 Payment for purchases of: (a) prospects	-	-
(b) equity investments	-	-
(c) other fixed assets	(15)	(15)
1.9 Proceeds from sale of: (a) prospects	-	-
(b) equity investments	-	-
(c) other fixed assets	-	-
1.10 Loans to other entities	-	-
1.11 Loans repaid by other entities	-	-
1.12 Other (provide details if material)	(25)	(25)
Net investing cash flows	(40)	(40)
1.13 Total operating and investing cash flows (carried forward)	(1,032)	(1,032)

+ See chapter 19 for defined terms.

For personal use only

Appendix 5B
Mining exploration entity quarterly report

1.13	Total operating and investing cash flows (brought forward)	(1,032)	(1,032)
Cash flows related to financing activities			
1.14	Proceeds from issues of shares, options, etc.	46	46
1.15	Proceeds from sale of forfeited shares	-	-
1.16	Proceeds from borrowings	-	-
1.17	Repayment of borrowings	-	-
1.18	Dividends paid	-	-
1.19	Other (provide details if material)	-	-
	Net financing cash flows	46	46
	Net increase (decrease) in cash held	(986)	(986)
1.20	Cash at beginning of quarter/year to date	6,091	6,091
1.21	Exchange rate adjustments to item 1.20	-	-
1.22	Cash at end of quarter	5,105	5,105

Payments to directors of the entity and associates of the directors

Payments to related entities of the entity and associates of the related entities

		Current quarter \$A'000
1.23	Aggregate amount of payments to the parties included in item 1.2	77
1.24	Aggregate amount of loans to the parties included in item 1.10	-

1.25 Explanation necessary for an understanding of the transactions

Item 1.23 includes aggregate amounts paid to directors including salary, directors' fees, consulting fees and superannuation.

Non-cash financing and investing activities

2.1 Details of financing and investing transactions which have had a material effect on consolidated assets and liabilities but did not involve cash flows

--

2.2 Details of outlays made by other entities to establish or increase their share in projects in which the reporting entity has an interest

--

Financing facilities available

Add notes as necessary for an understanding of the position.

		Amount available \$A'000	Amount used \$A'000
3.1	Loan facilities	Nil	Nil
3.2	Credit standby arrangements	Nil	Nil

+ See chapter 19 for defined terms.

For personal use only

Estimated cash outflows for next quarter

		\$A'000
4.1	Exploration and evaluation	1,000
4.2	Development	-
4.3	Production	-
4.4	Administration	100
Total		1,100

Reconciliation of cash

Reconciliation of cash at the end of the quarter (as shown in the consolidated statement of cash flows) to the related items in the accounts is as follows.		Current quarter \$A'000	Previous quarter \$A'000
5.1	Cash on hand and at bank	136	459
5.2	Deposits at call	4,969	5,632
5.3	Bank overdraft	-	-
5.4	Other (provide details)	-	-
Total: cash at end of quarter (item 1.22)		5,105	6,091

Changes in interests in mining tenements

	Tenement reference	Nature of interest (note (2))	Interest at beginning of quarter	Interest at end of quarter	
6.1	Interests in mining tenements relinquished, reduced or lapsed	P37/7053	Registered Holder	100%	Nil
6.2	Interests in mining tenements acquired or increased				

+ See chapter 19 for defined terms.

For personal use only

Appendix 5B
Mining exploration entity quarterly report

Issued and quoted securities at end of current quarter

Description includes rate of interest and any redemption or conversion rights together with prices and dates.

	Total number	Number quoted	Issue price per security (see note 3) (cents)	Amount paid up per security (see note 3) (cents)
7.1 Preference +securities <i>(description)</i>				
7.2 Changes during quarter (a) Increases through issues (b) Decreases through returns of capital, buy-backs, redemptions				
7.3 +Ordinary securities	42,331,903	42,331,903		
7.4 Changes during quarter (a) Increases through issues (b) Decreases through returns of capital, buy-backs	230,000	230,000		
7.5 +Convertible debt securities <i>(description)</i>				
7.6 Changes during quarter (a) Increases through issues (b) Decreases through securities matured, converted				
7.7 Options <i>(description and conversion factor)</i>	15,995,267	15,995,267	<i>Exercise price</i> 20 cents	<i>Expiry date</i> 31 August 2011
	600,000	Nil	20 cents	31 August 2011
	250,000	Nil	30 cents	16 April 2011
	1,500,000	Nil	35 cents	23 July 2011
	4,500,000	Nil	35 cents	31 August 2011
	800,000	Nil	20 cents	2 March 2012
	3,500,000	Nil	20 cents	30 November 2012
	50,000	Nil	35 cents	30 November 2012
7.8 Issued during quarter	600,000	Nil	20 cents	31 August 2011
7.9 Exercised during quarter	155,000	155,000	20 cents	31 August 2011
7.10 Expired during quarter	75,000	Nil	20 cents	2 March 2012
7.11 Debentures <i>(totals only)</i>				
7.12 Unsecured notes <i>(totals only)</i>				

+ See chapter 19 for defined terms.

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 1022: Accounting for Extractive Industries* and *AASB 1026: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
