

## ASX ANNOUNCEMENT

30 November 2010

# Strong Gold Anomaly at Hann Prospect

## *Up to 30,000 metres of RC drilling planned at Hann in 2011*

Eleckra Mines Limited ("Eleckra") (ASX: EKM) (soon to be renamed **Gold Road Resources Limited**) is pleased to announce further exciting results from the expanded geochemical soil survey at the southern extension of the Hann prospect at its 100%-owned Yamarna Gold Project.

An expanded soil geochemistry program recently carried out at the southern extension of the previously identified 2.8 kilometre-long gold anomaly at Hann has defined another 1.5 kilometre-long zone that contains elevated gold values, only 1.1 kilometres east of the Attila gold deposit and 2.4 kilometres west of the high-grade Central Bore gold discovery in a parallel magnetic structure. (Refer to Figure 1). This increases the extent of the Hann prospect to over 4.3km long.

The previous soil survey on 20mE x 40mN grid identified a 2.8 kilometres gold anomaly with numerous elevated gold grades and with up to 2.1 g/t Au. Detailed 1-metre-channel soil sampling over selected gold anomalies identified, returned grades up to 361g/t Au (429g/t Au in repeat assay), 19g/t Au, 16g/t Au, 8.4g/t Au, 3.5g/t Au, 2.3g/t Au, 2.1g/t Au, 1.3g/t Au, and 1.1g/t Au, each over 1 metre sample intervals(refer ASX release 3 May 2010).

In the current soil survey, 23% of soil samples were above 10ppb Au (0.01g/t Au) with up to 1.3g/t Au, 0.73g/t Au, 0.54g/t Au, 0.21g/t Au, and 0.19g/t Au.

In June 2010, Eleckra completed thirty-nine shallow, 60 metre deep, reconnaissance RC holes for 2,340 metres over five fences at the southern portion of the original 2.8 kilometre-long gold anomaly at Hann prospect, covering only 200 metre north-south extent of this 4.3km anomaly.

Significant results (previously announced) from this RC drilling program from 1-metre splits at **Hann** included:

- 2 metres at **5.10** g/t Au from 31 metres including 1 metre at **7.61** g/t Au;
- 1 metre at 4.13 g/t Au from 58 metres
- 2 metres at 2.42 g/t Au from 0 metres including 3.98 g/t Au (6.11 g/t Au in repeat sample);
- 1 metre at 3.31 g/t Au from 36 metres;
- 2 metres at 1.85 g/t Au from 54 metres including 1 metre at 3.05 g/t Au;

Exploration to date over the Hann prospect has delineated a 4.3 kilometres-long gold anomaly that is open to the north and south. Given the size and prospectivity of this area, Eleckra is planning a major RC program at the Hann prospect in 2011 to gain a better understanding of the geology and gold potential.

### **About Eleckra Mines Ltd (soon to be renamed Gold Road Resources Limited)**

Eleckra Mines Limited (ASX: EKM) is a gold exploration company which owns tenements covering over 4,000 square kilometres of the Yamarna greenstone belt. The Yamarna Project is located approximately 150 kilometres east of Laverton on the eastern edge of the Yilgarn Craton and within the Yamarna Greenstone Belt. The Yamarna belt, adjacent to the 500 kilometre long Yamarna shear zone, is a historically under-explored region that is highly prospective for gold mineralisation and hosts a number of significant new discoveries. It lies north of the recently discovered 6 million ounce Tropicana deposit owned by AngloGold-Ashanti / Independence.

Eleckra is focussing on progressing its two key project areas within the greater Yamarna Project:

- The Attila Trend, (Barbarian Trend), which includes Attila, Alaric and Khan deposits and extends for over 33 kilometres and hosts a significant JORC resource.
- The Central Bore Trend (Imperial Trend) is a 6 km<sup>2</sup> area east of the southern extent of the Barbarian Trend which has delivered four new discoveries in 15 months:
  - **Central Bore** - gold mineralisation over a strike length of 800 metres and from surface to a depth of 300 metres, with assay results of up to 845g/t gold. It remains open to the north, south and depth.
  - **Justinian** – 200 metres east of Central Bore, 600 metres long, wider structure than Central Bore.
  - **Byzantium** – 500 metres west of Central Bore, 1km long, VMS style base metal prospect.
  - **Hann** – 2.4km west of Central Bore, 4.3km long, three parallel gold anomalies.

#### NOTES:

The information in this report which relates to Exploration Results, or Mineral Resources is based on information compiled by Ziggy Lubieniecki, the General Manager of Eleckra Mines Limited, who is a Member of the Australasian Institute of Mining and Metallurgy and a Member of the Australian Institute of Geoscientists. Ziggy Lubieniecki has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Ziggy Lubieniecki consents to the inclusion in the report of the matters based on this information in the form and context in which it appears.
