13 January 2011

## **BUREY RECOMMENCES FIELD WORK AT BALATINDI, KEROUANE PROJECT, GUINEA**

Burey Gold Limited (ASX:BYR) advises that drilling activity resumed at the Balatindi Licence on 7th January following a short break by the drilling company which commenced 20/12/2010.

Logging drill core from the Balatindi drilling program continued through this period. All of hole BLD001 core was cut, despatched to and arrived at the laboratory in Ghana prior to Xmas to commence preparation and analysis. A representative split of the each sample is to be despatched to Perth for low level multi-element ICP analysis. Six non-representative slices of core from upper BLD001 were submitted for indicative petrology / mineragraphics analysis in mid-December.

Logging and cutting has progressed such that as of today's date BLD003 core is complete. Drilling of BLD 009 was resumed from 150m on 7th January. Access preparation for the Balatindi RC programme is also in progress. Drilling contractor, Amco Drilling, imported additional HQ rods to enable the extension of BLD003 beyond its previous termination depth of 400m.

The Balatindi drilling program is scheduled for completion by the end of January 2011. The drill crew will then relocate to the Mansounia Project to drill-test "The Magnificent" prospect (~6-8RC holes, ~1,200 -1,400m) and then follow up drilling the S and SW extensions of the Mansounia gold deposit (~62 RC holes ~6,500m).
