ASX Limited
 Company Announcements Office

21st November 2011

Drill Hole ADH 003 Cuts 409.1m grading 0.30g/t Gold + 0.08% Copper

Frontier Resources Ltd is pleased to announce that assays from diamond drill hole ADH 003 have continued to demonstrate the excellent gold - copper mineralisation size potential of the Andewa Project in Papua New Guinea.

Although the results are not as high a tenor as in previous holes, the Andewa system is very large and the Company remains convinced that additional drilling that is now in progress will intersect substantial gold and copper mineralisation.

Peak assays were 1m of 9.4 g/t gold with 0.26% copper, 0.44 % copper + 0.19 g/t gold and 1m of 106 ppm molybdenum.

Please refer to Table 1 for individual higher grade interval weighted assay average and Table 3 for hole location and orientation information.

Figures 1 and 2 show the hole location relative to chargeability and resistivity at 75m below surface, respectively.

For additional information relating to Frontier Resources and/ or its projects, please visit the Company's website at

			Northing (m)	Easting (m)	RL (masl)	Azimuth (magnetic)	Inclination
ADH 003	409.1	Ehgin	9384618	716878	386	219	-45
NB: Reference datum is AMG Zone 55, AGD 066.							

The information in this report that relates to Exploration Results and Mineral Resources is based on information compiled by, or compiled under the supervision of Peter A. McNeil - Member of the Aust. Inst. of Geoscientists. Peter McNeil is the Managing Director of Frontier Resources, who consults to the Company. Peter McNeil has sufficient experience which is relevant to the type of mineralisation and type of deposit under consideration to qualify as Competent Person as defined in the 2004 Edition of the Australasian Code of Reporting Exploration Results, Mineral Resources and Ore Resources. Peter McNeil consents to the inclusion in the report of the matters based on the information in the form and context in which it appears.
