New Graphite Projects in Sweden

Company Update Presentation
Mines & Money Hong Kong
19 March 2012

ASX:TLG

Forward Looking Statements & Disclaimer

This presentation has been prepared by Talga Gold Limited (ACN 138 405 419) ("Issuer") for the sole purpose of providing an overview of its current prospects and proposed exploration and development strategy to recipients ("Recipient"). This presentation and its contents are provided to the Recipient in confidence and may not be reproduced or disclosed in whole or in part to any other person, without the written consent of the Issuer.

The presentation is based on information available to the Issuer as at the date of the presentation. The information contained in this presentation has not been verified by the Issuer nor has the Issuer conducted any due diligence in relation to that information. The presentation contains selected information and does not purport to be all inclusive or to contain all information that may be relevant to the Recipient. The Recipient acknowledges that circumstances may change and this presentation may become outdated as a result. The Issuer accepts no obligation to update or correct this presentation.

This document includes forward-looking statements. When used in this document, the words such as "could," "plan," "estimate," "expect," "intend," "may," "potential," "should," and similar expressions are forward-looking statements. Although the Issuer believes that the expectations reflected in these forward-looking statements are reasonable, such statements involve risks and uncertainties, and no assurance can be given that actual results will be consistent with these forward-looking statements.

No representation or warranty, express or implied, is made as to the fairness, accuracy, completeness or correctness of the information, opinions and conclusions contained in this presentation. To the maximum extent permitted by law, none of the Issuer, its directors, employees or agents, advisers, nor any other person accepts any liability for any loss arising from the use of this presentation or its contents or otherwise arising in connection with it, including, without limitation, any liability arising from fault or negligence on the part of the Issuer or its directors, employees or agents. Nothing in this Presentation is a promise or representation as to the future. Statements or assumptions in this presentation as to future matters may prove to be incorrect and differences may be material. The Issuer does not make any representation or warranty as to the accuracy of such statements or assumptions.

The information in this presentation does not take into account the investment objectives, financial situation and particular needs of any Recipient. The Recipient should not make an investment decision on the basis of this presentation alone and the Recipient should conduct its own independent investigation and assessment of the content of this presentation. Nothing in this presentation constitute financial product, investment, legal, tax or other advice. Nothing in this presentation should be construed as a solicitation to buy or sell any security or to engage or refrain from engaging in any dealing in any security.

Photographs, maps, charts, diagrams and schematic drawings appearing in this presentation are owned by and have been prepared by or commissioned by the Issuer, unless otherwise stated. Maps and diagrams used in the presentation are illustrative only and may not be drawn to scale. Unless otherwise stated, all data contained in charts, graphs and tables is based on information available at the date of this presentation. By accepting this presentation the Recipient agrees to be bound by the foregoing statements.

Introduction

- For personal use only
- ▶ Raised \$5M in IPO July 2010
 - ▶ Right to 100% equity in all projects
 - ▶ Active explorer drilled 90+ holes totalling 6,415 metres and sampled over 7,100 geochemical sites
 - ▶ Further Raise \$2.1M in June 2011
 - ▶ Drilling iron, gold and tellurium discoveries in Western Australia
 - ▶ Well funded for exploration \$3.23m cash^(at 31 Dec, 2011)
 - ▶ *New Projects - In 2011 targeted graphite in north Sweden and acquired permits in subsidiary Talga Mining Pty Ltd.*
 - ▶ *In 2012 acquired right to additional IOCG, Iron and Graphite projects in Sweden through option with Teck Resources Limited to acquire 100% of subsidiary TCL Sweden Ltd*

Talga Gold staff conducting reconnaissance rock geochemical sampling in Western Australia

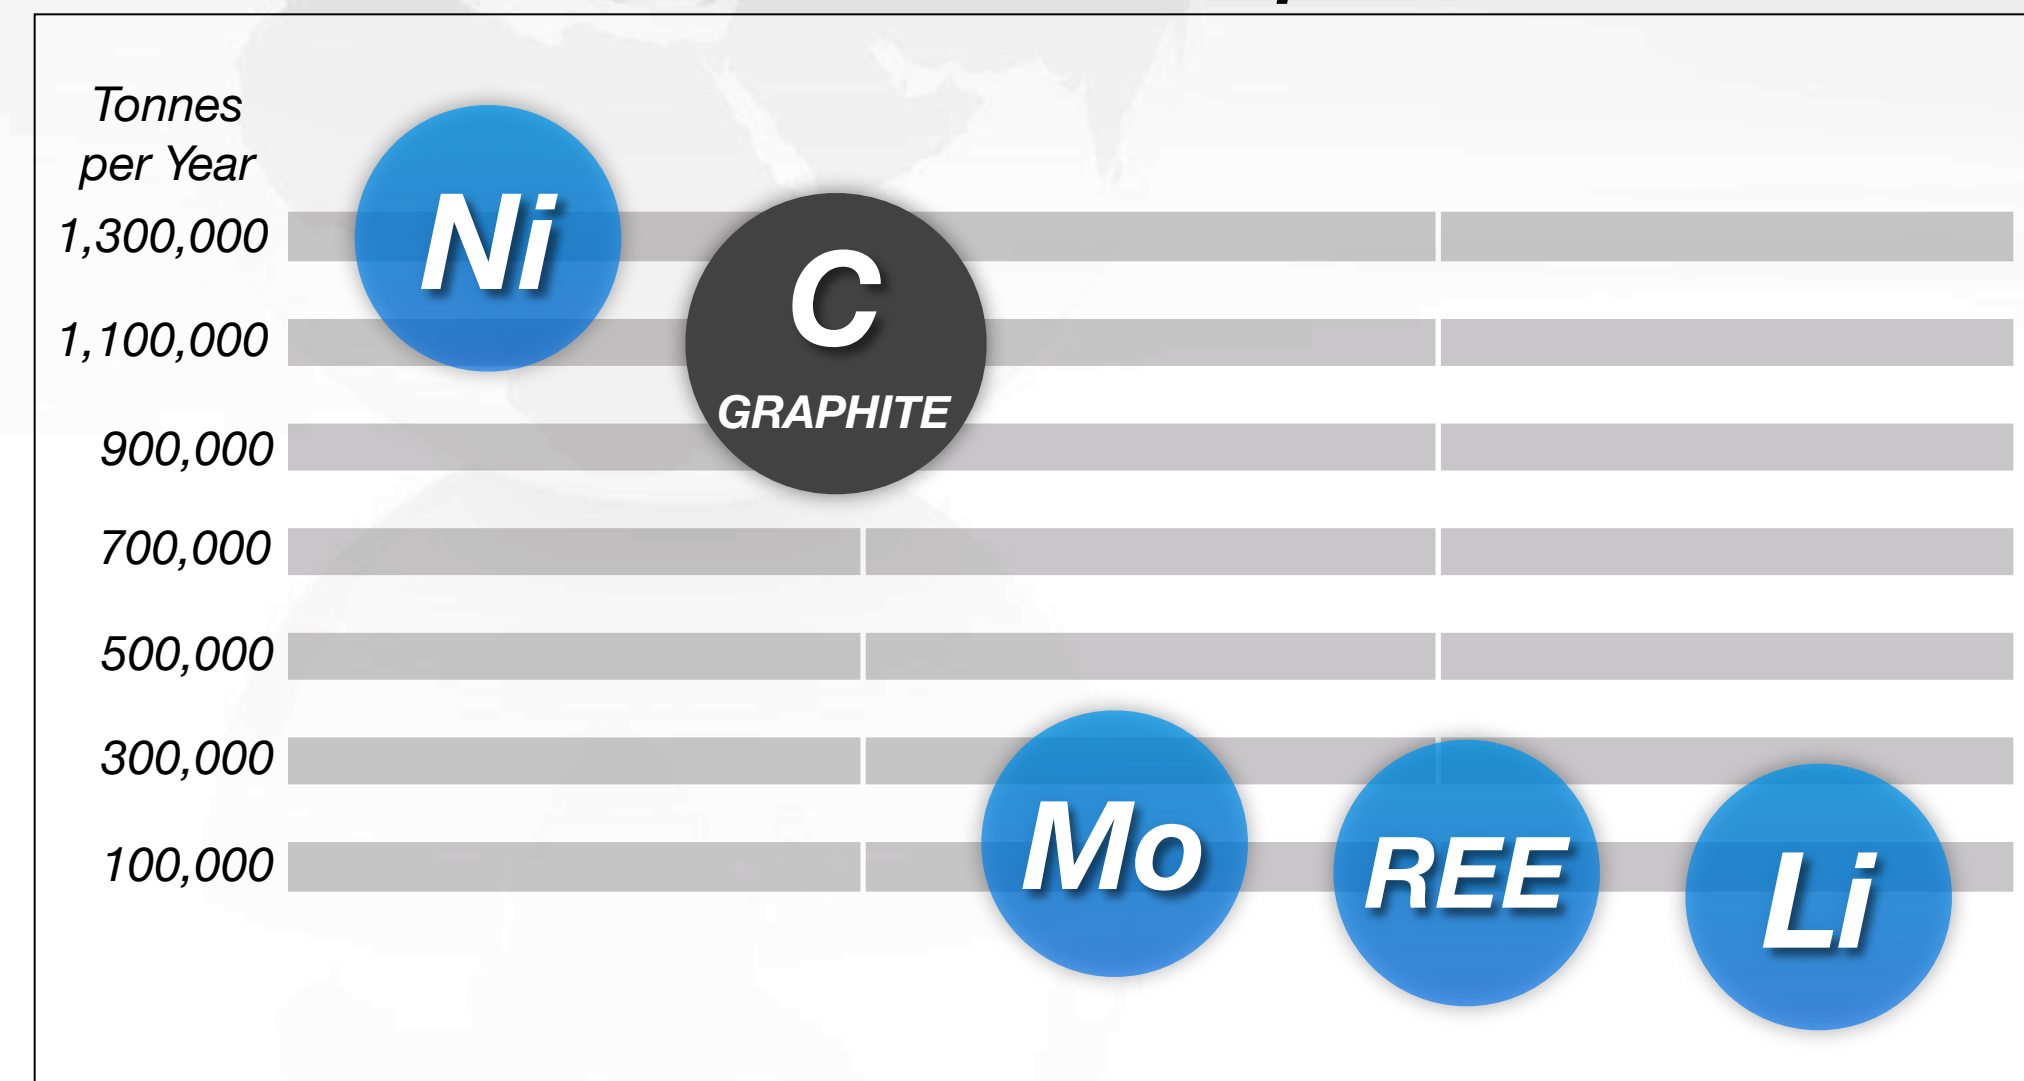

What is Graphite?

For personal use only

- ▶ Graphite is a naturally occurring form of Carbon.
- ▶ Worldwide “Graphite” market estimated to be worth US\$12 Billion per annum*:
 - Graphite Electrodes US\$5.5 Billion
 - Carbon Fibres US\$3.0 Billion
 - Specialty Graphite US\$1.0 Billion
 - Blocks, Molds and Pieces
 - Granular & Powder US\$1.0 Billion
 - All Other Graphite - Products US\$1.5 Billion
- ▶ Annual natural graphite market (1.1Mt C) is similar size to Nickel market (1.3Mt Ni)
- ▶ New graphite markets in ‘green’ energy demand
- ▶ Li-ion batteries typically contain up to 20 times graphite as lithium.

Estimated Worldwide Natural Graphite Market in 2011

*Source: “The World Wide Amorphous Graphite Market” Asbury Carbons, Graphite Conference Dec 6-7 2011

Why Graphite?

- ▶ World supply is 82% from China and North Korea
- ▶ Traditional graphite markets in steel production are strong; growth 5% annum
- ▶ China exports drying up under new tariffs and regulations
- ▶ Graphite declared a “Strategic Mineral” akin to Lithium and REE’s by USA and EU zone
- ▶ Compulsory growth - some countries legislating increased electric vehicles; EV Li-ion batteries use up to 90kg graphite each
- ▶ Consumers wanting reliable, timely and high quality supply
- ▶ Prices risen strongly since 2005

World Natural Graphite Production

TCL Sweden Ltd Option

During 2011 Talga Gold Ltd (“Talga”) subsidiary Talga Mining P/L pegged 100% of exploration permits in Sweden containing Graphite projects including JORC Code Compliant Inferred Resource Estimate and Exploration Targets.

During Q1 2012 Talga entered an option agreement with Teck Resources Limited (“Teck”) to purchase 100% subsidiary TCL Sweden Ltd (“TCL”). For option details see Appendix 4 and ASX release TLG: 28 Feb, 2012.

TCL contains complementary assets including iron, graphite and iron oxide copper-gold (“IOCG”) projects with JORC Code Compliant Inferred Resource Estimates and Exploration Targets for Iron and Graphite.

Sweden Projects Overview

GRAPHITE

JORC Code Inferred Resource Estimates

Nunasvaara	3.6Mt @ 23.0% C
Raitajärvi	0.5Mt @ 10.8% C
Total	4.1Mt @ 21.5% C

JORC Code Exploration Targets¹ (additional)

Total	7.0-13.8Mt @ 3.4-40.9% C
--------------	---------------------------------

IRON

JORC Code Inferred Resource Estimates

Masugnbyn	44.1Mt @ 30.9% Fe
-----------	-------------------

JORC Code Exploration Targets¹ (additional)

Total	90-140Mt @ 25-50% Fe
--------------	-----------------------------

Nunasvaara *(Option to 100%)*

GRAPHITE

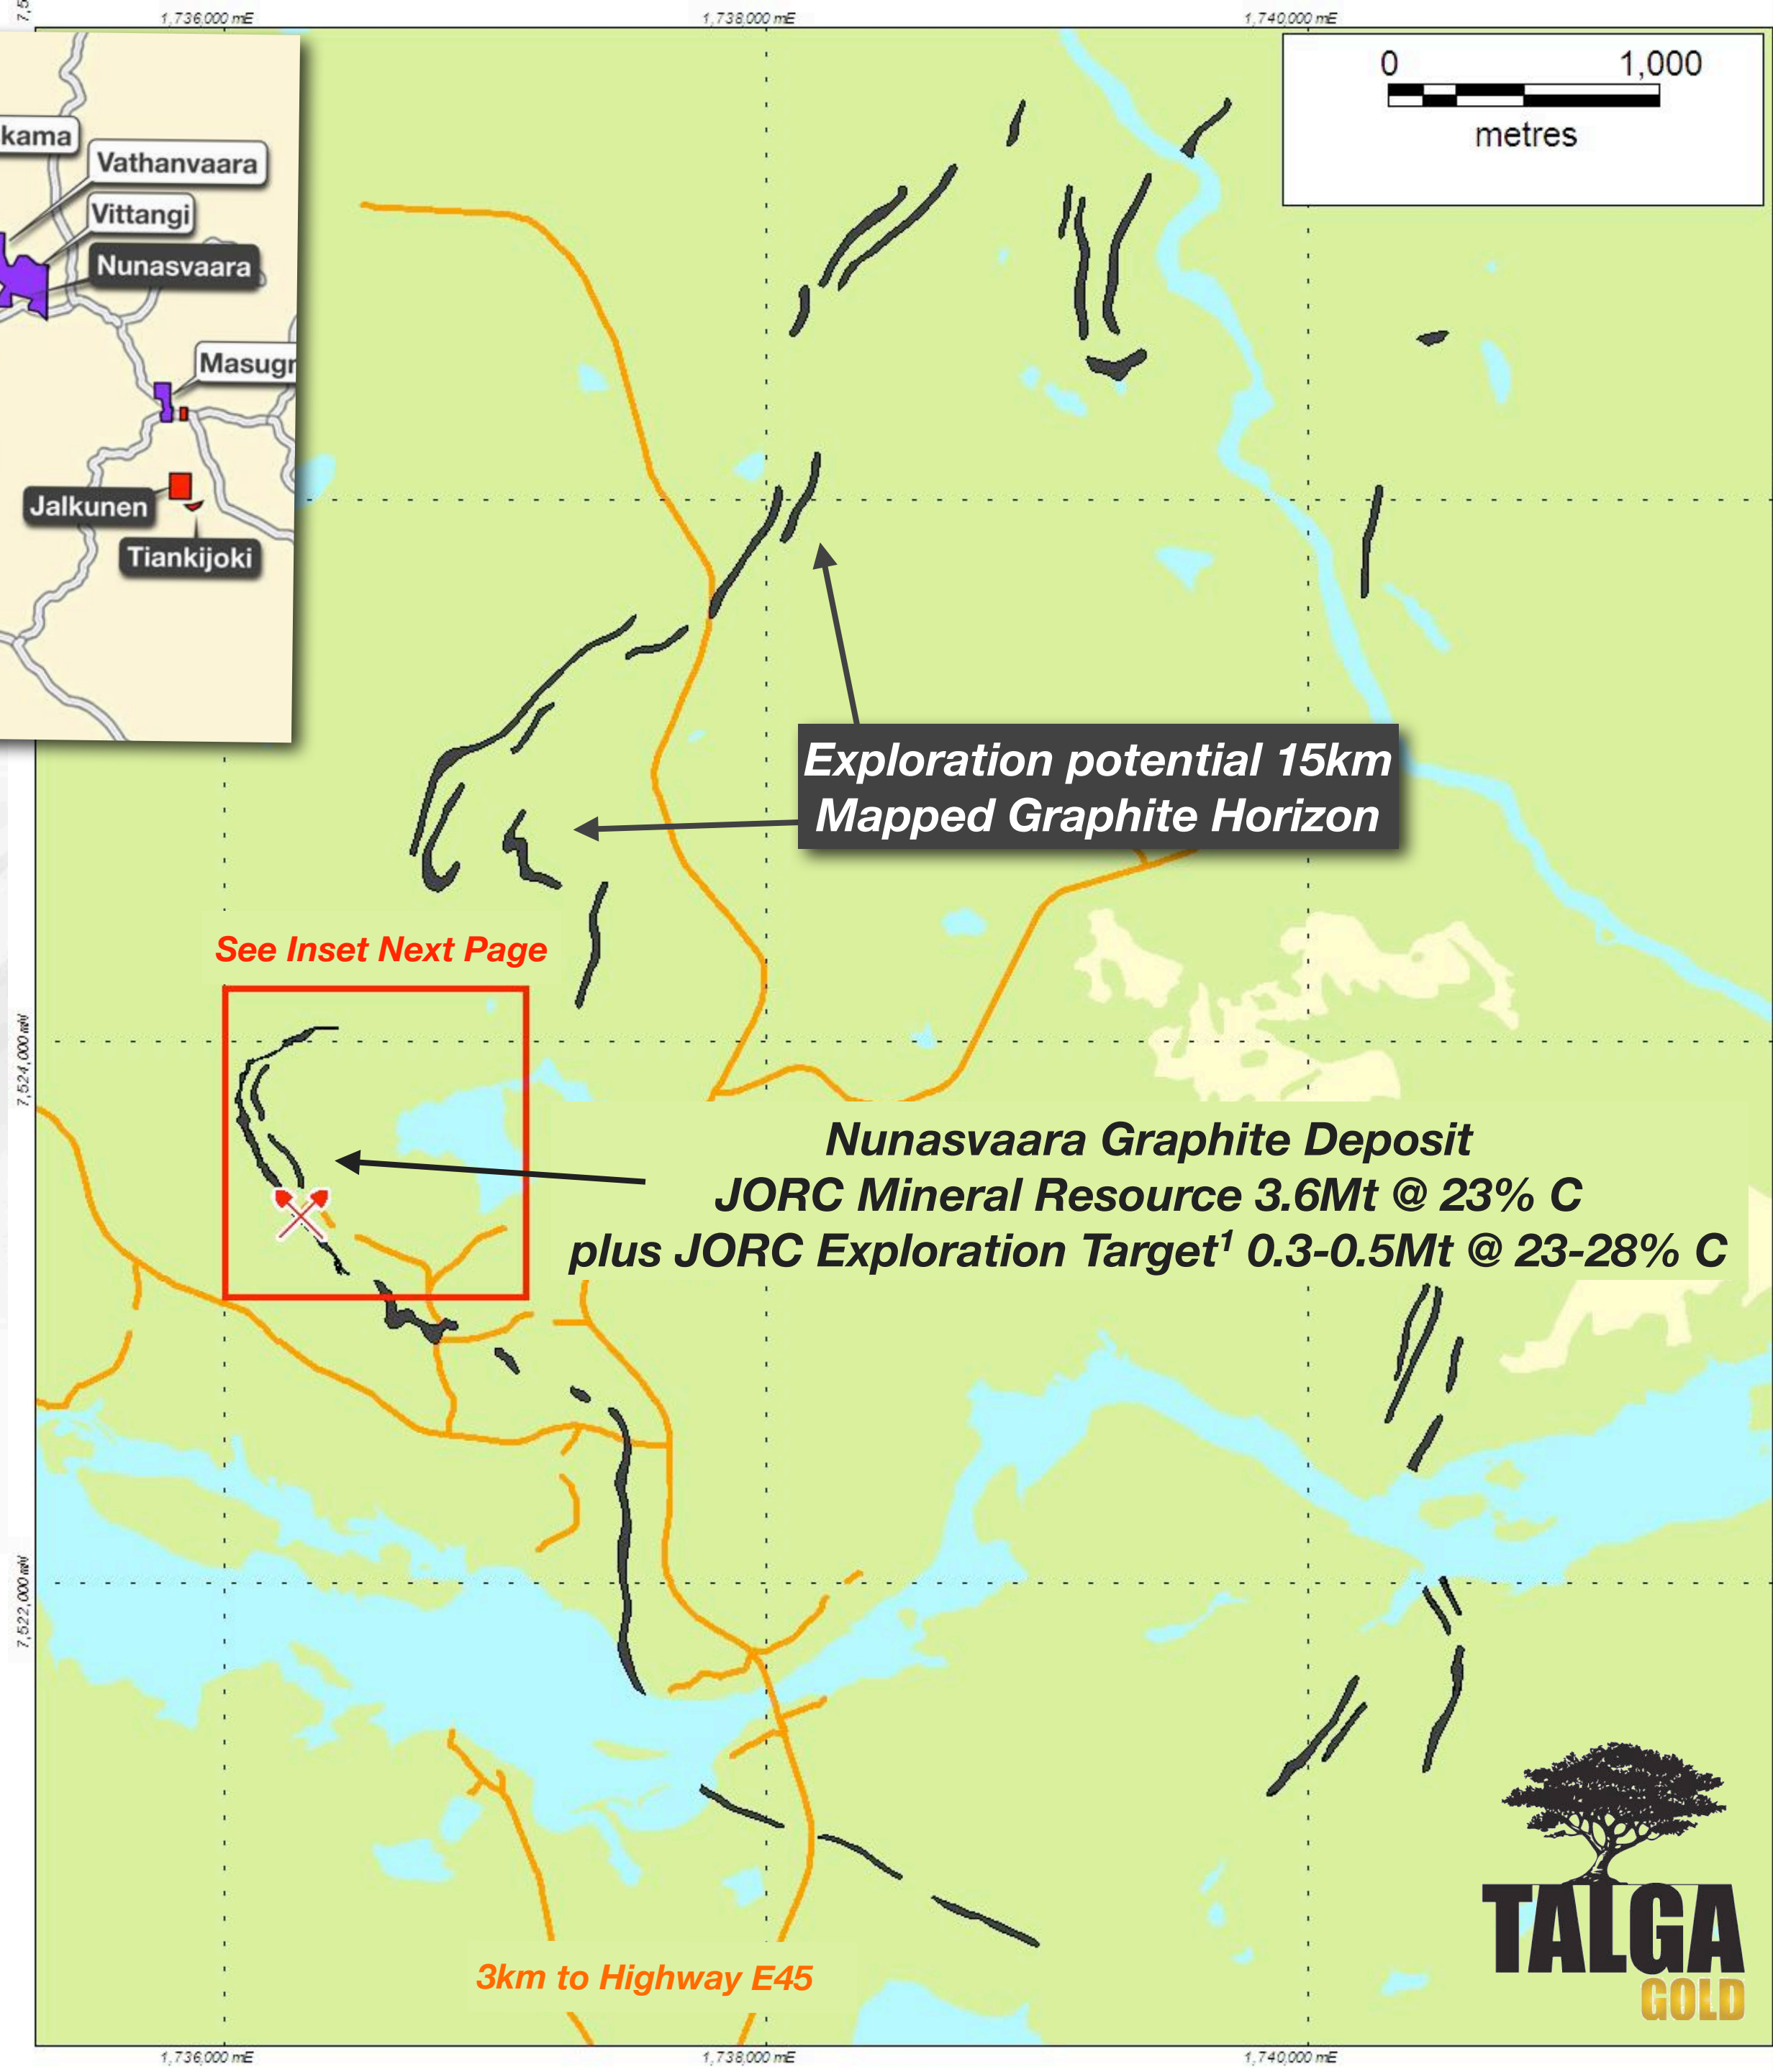

JORC Code Compliant Inferred Resource Estimate
Nunasvaara 3.6Mt @ 23.0% C

JORC Code Compliant Exploration Target¹
Strike Extension 0.3-0.5Mt @ 23-28% C

Mineral resource delineated with 17 of 21 drill holes for 1,677.2m over 700m strike length with 1970-82 drilling by Sweden Geological Survey and LKAB Prospecting AB

- ▶ Open at depth and along strike
- ▶ Growth potential: 15km mapped graphite horizon

Nunasvaara

GRAPHITE

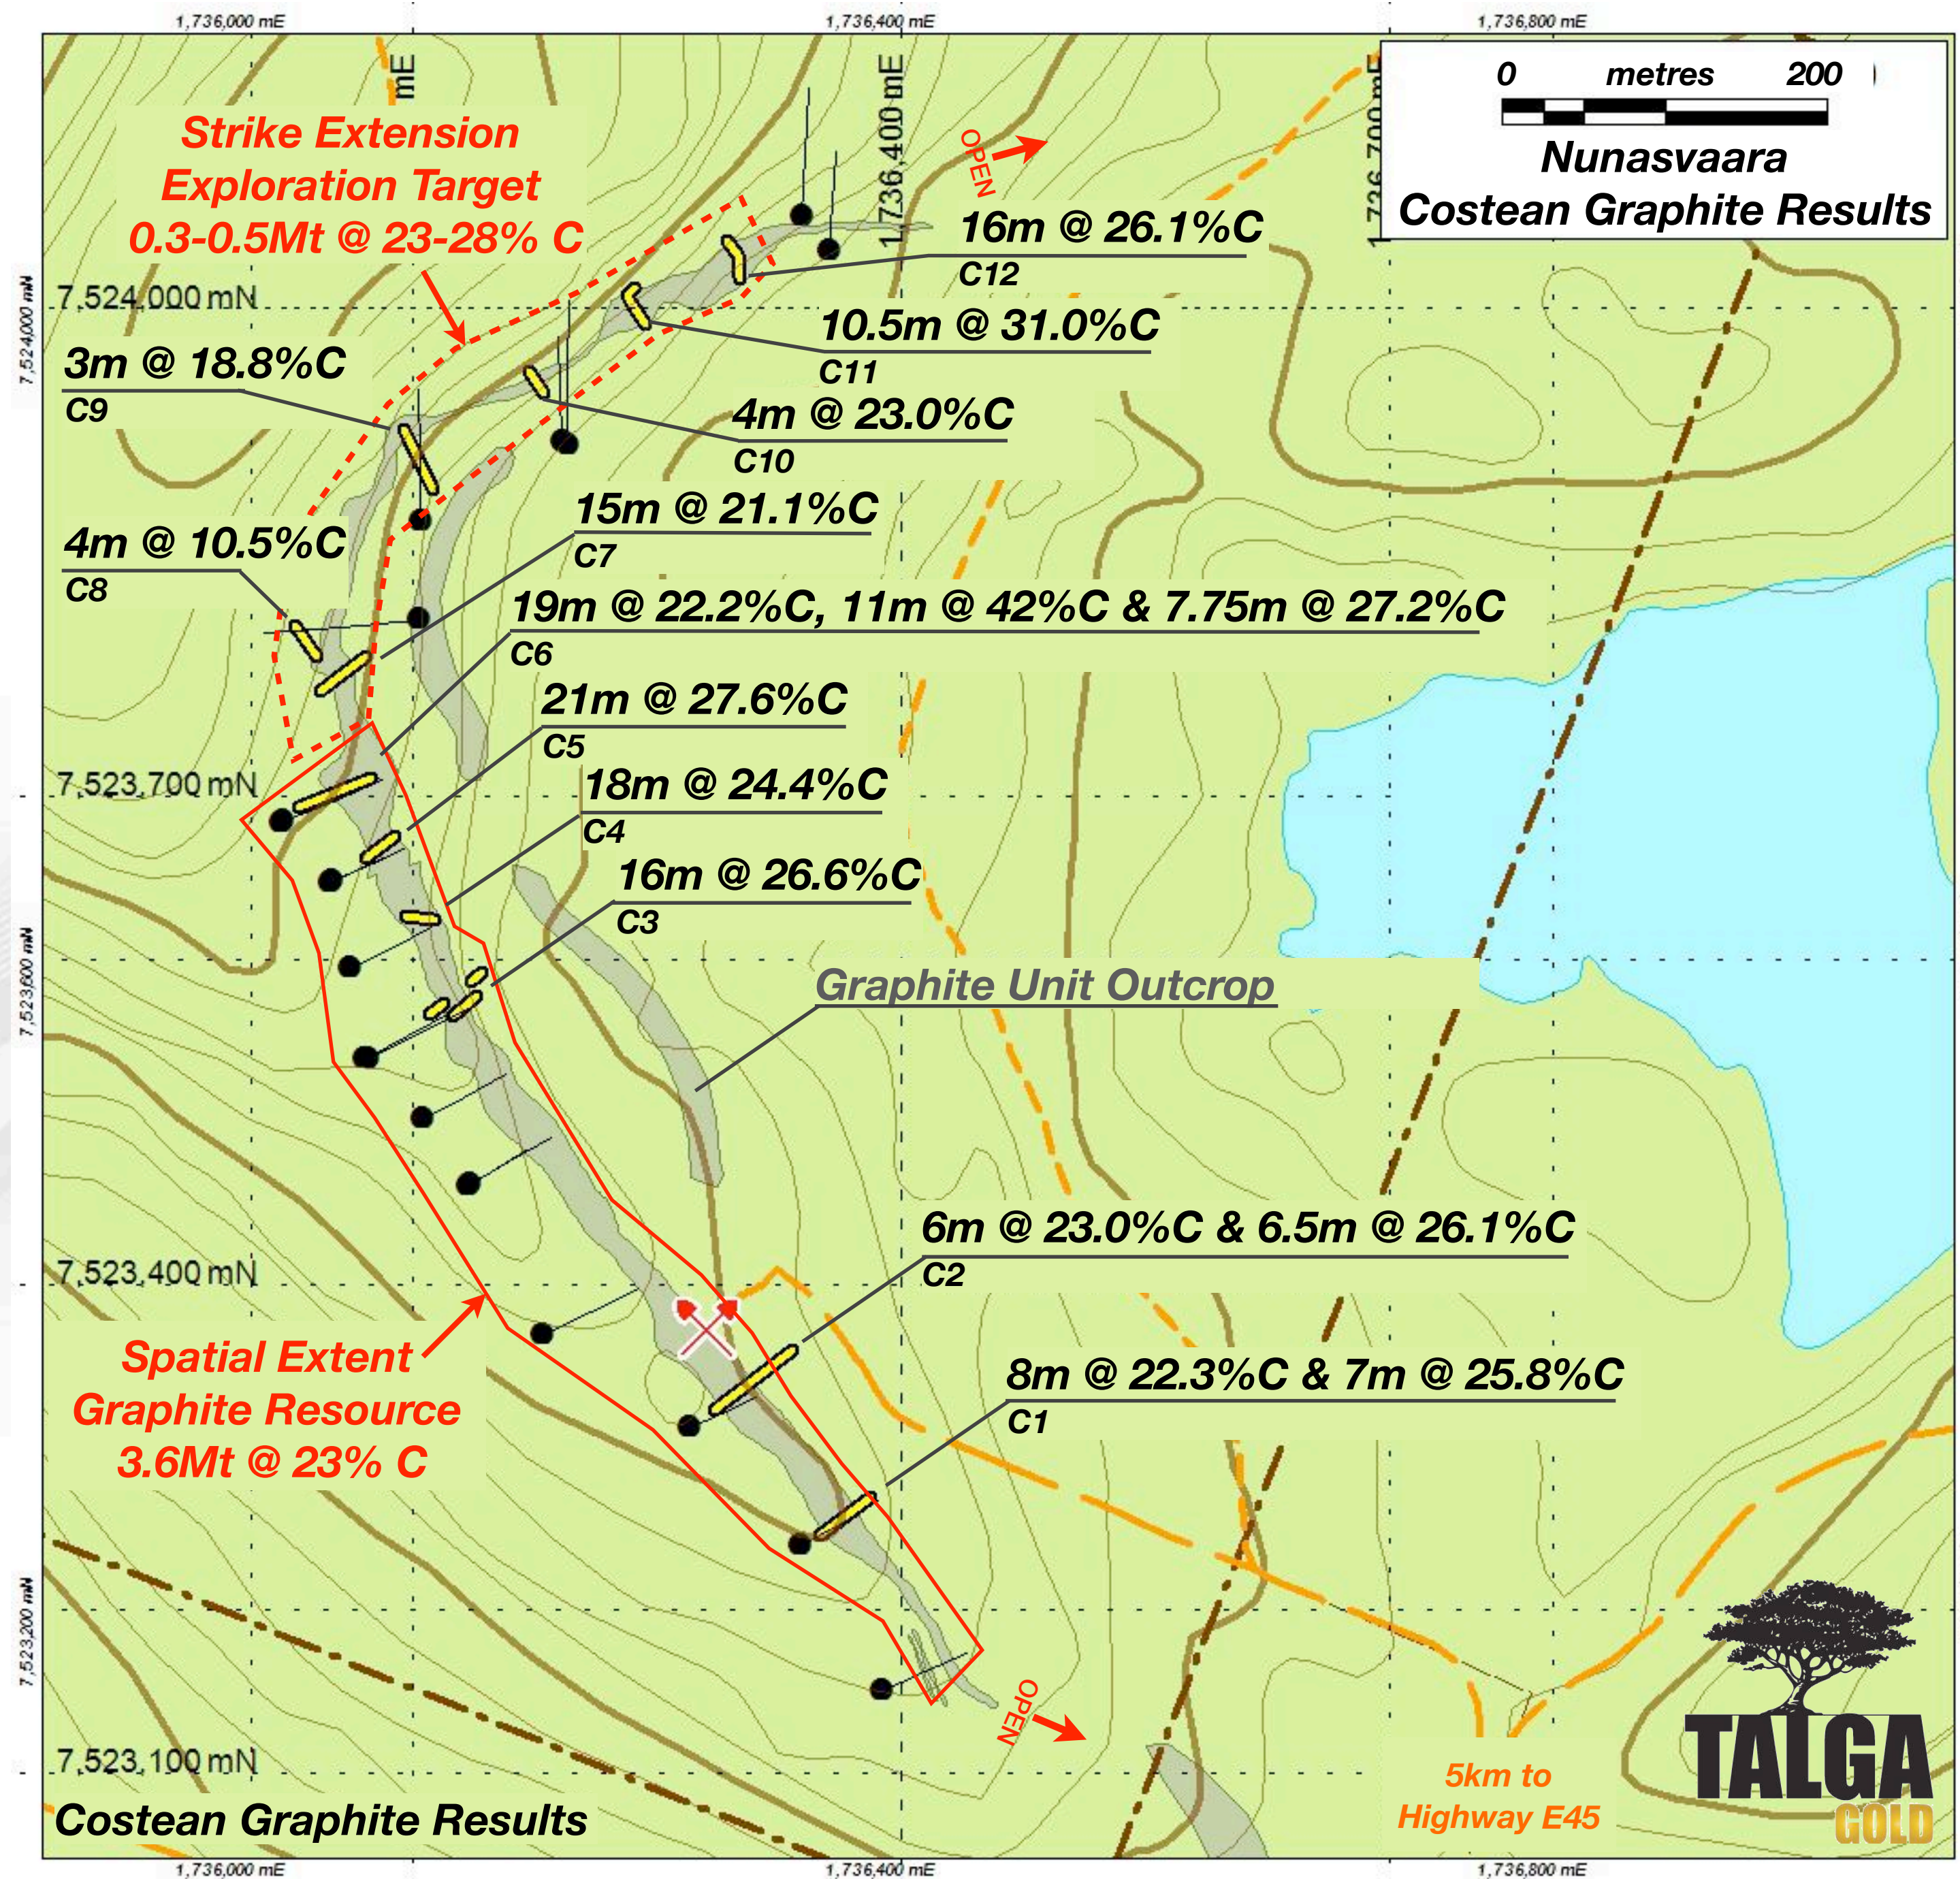

Graphite Mineralisation from Surface

12 trenches/costeans* and bulk sampling during show mineralisation **from surface**

Graphite flake size historically reported as amorphous but also as ranging 0.06-1.0mm so essentially untested.

Distance to: Highway and grid power = 5km, Town = 15km, Rail = 23km, Port = 190km, International airport = 61km

*Trench/Costean Data: Trenches/costeans selectively sampled as 1-2m composites bound by lithological contacts and visual graphite grade. Many intervals end in mineralisation. Intervals calculated here using 2.5% C cut-off grade with no internal dilution. Intervals >3m plotted.

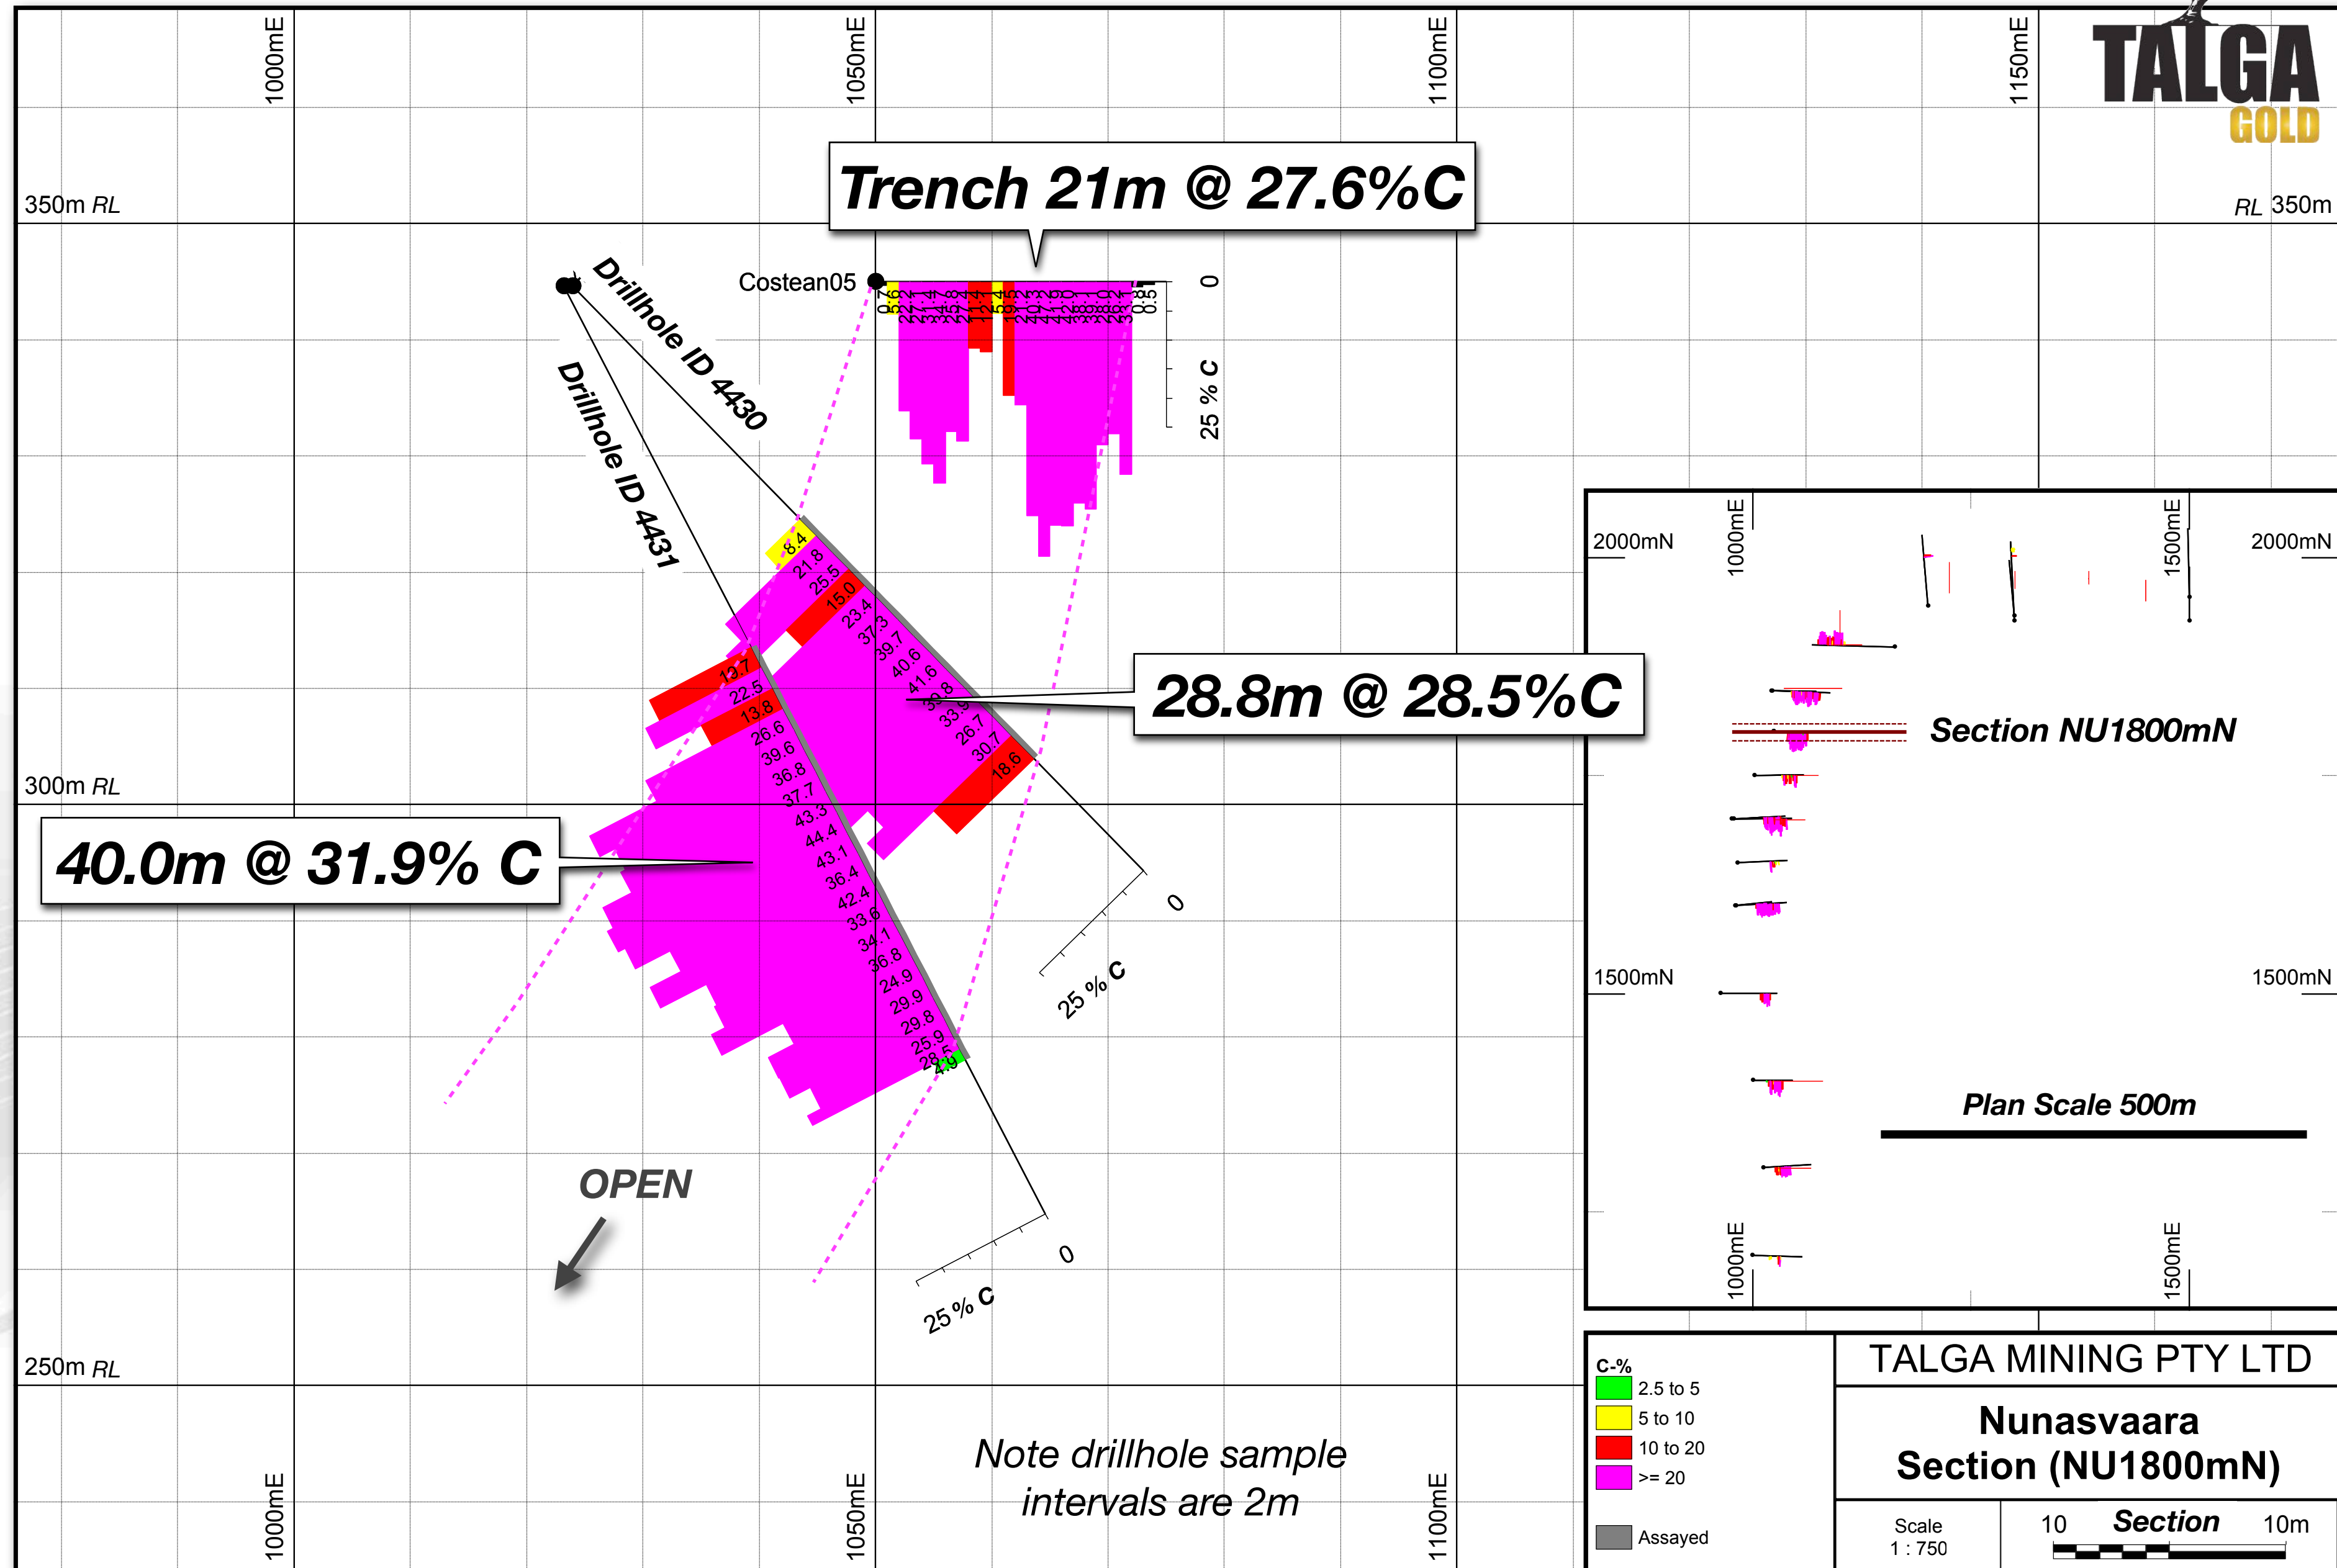

Nunasvaara

GRAPHITE

Raitajärvi

GRAPHITE

- ▶ Previous work includes 87 petrographic samples indicate excellent graphite size and distribution (see appendix 2 for details)
- ▶ >85% of graphite flake averages “Fine/Medium” to “Jumbo” size.
- ▶ Preliminary hydrometallurgy test upgrades graphite to 99.06 %C in low temperature circuit

Photomicrograph: Raitajärvi Graphite Flakes
100x magnification

Exploration Projects *Talga 100%*

GRAPHITE

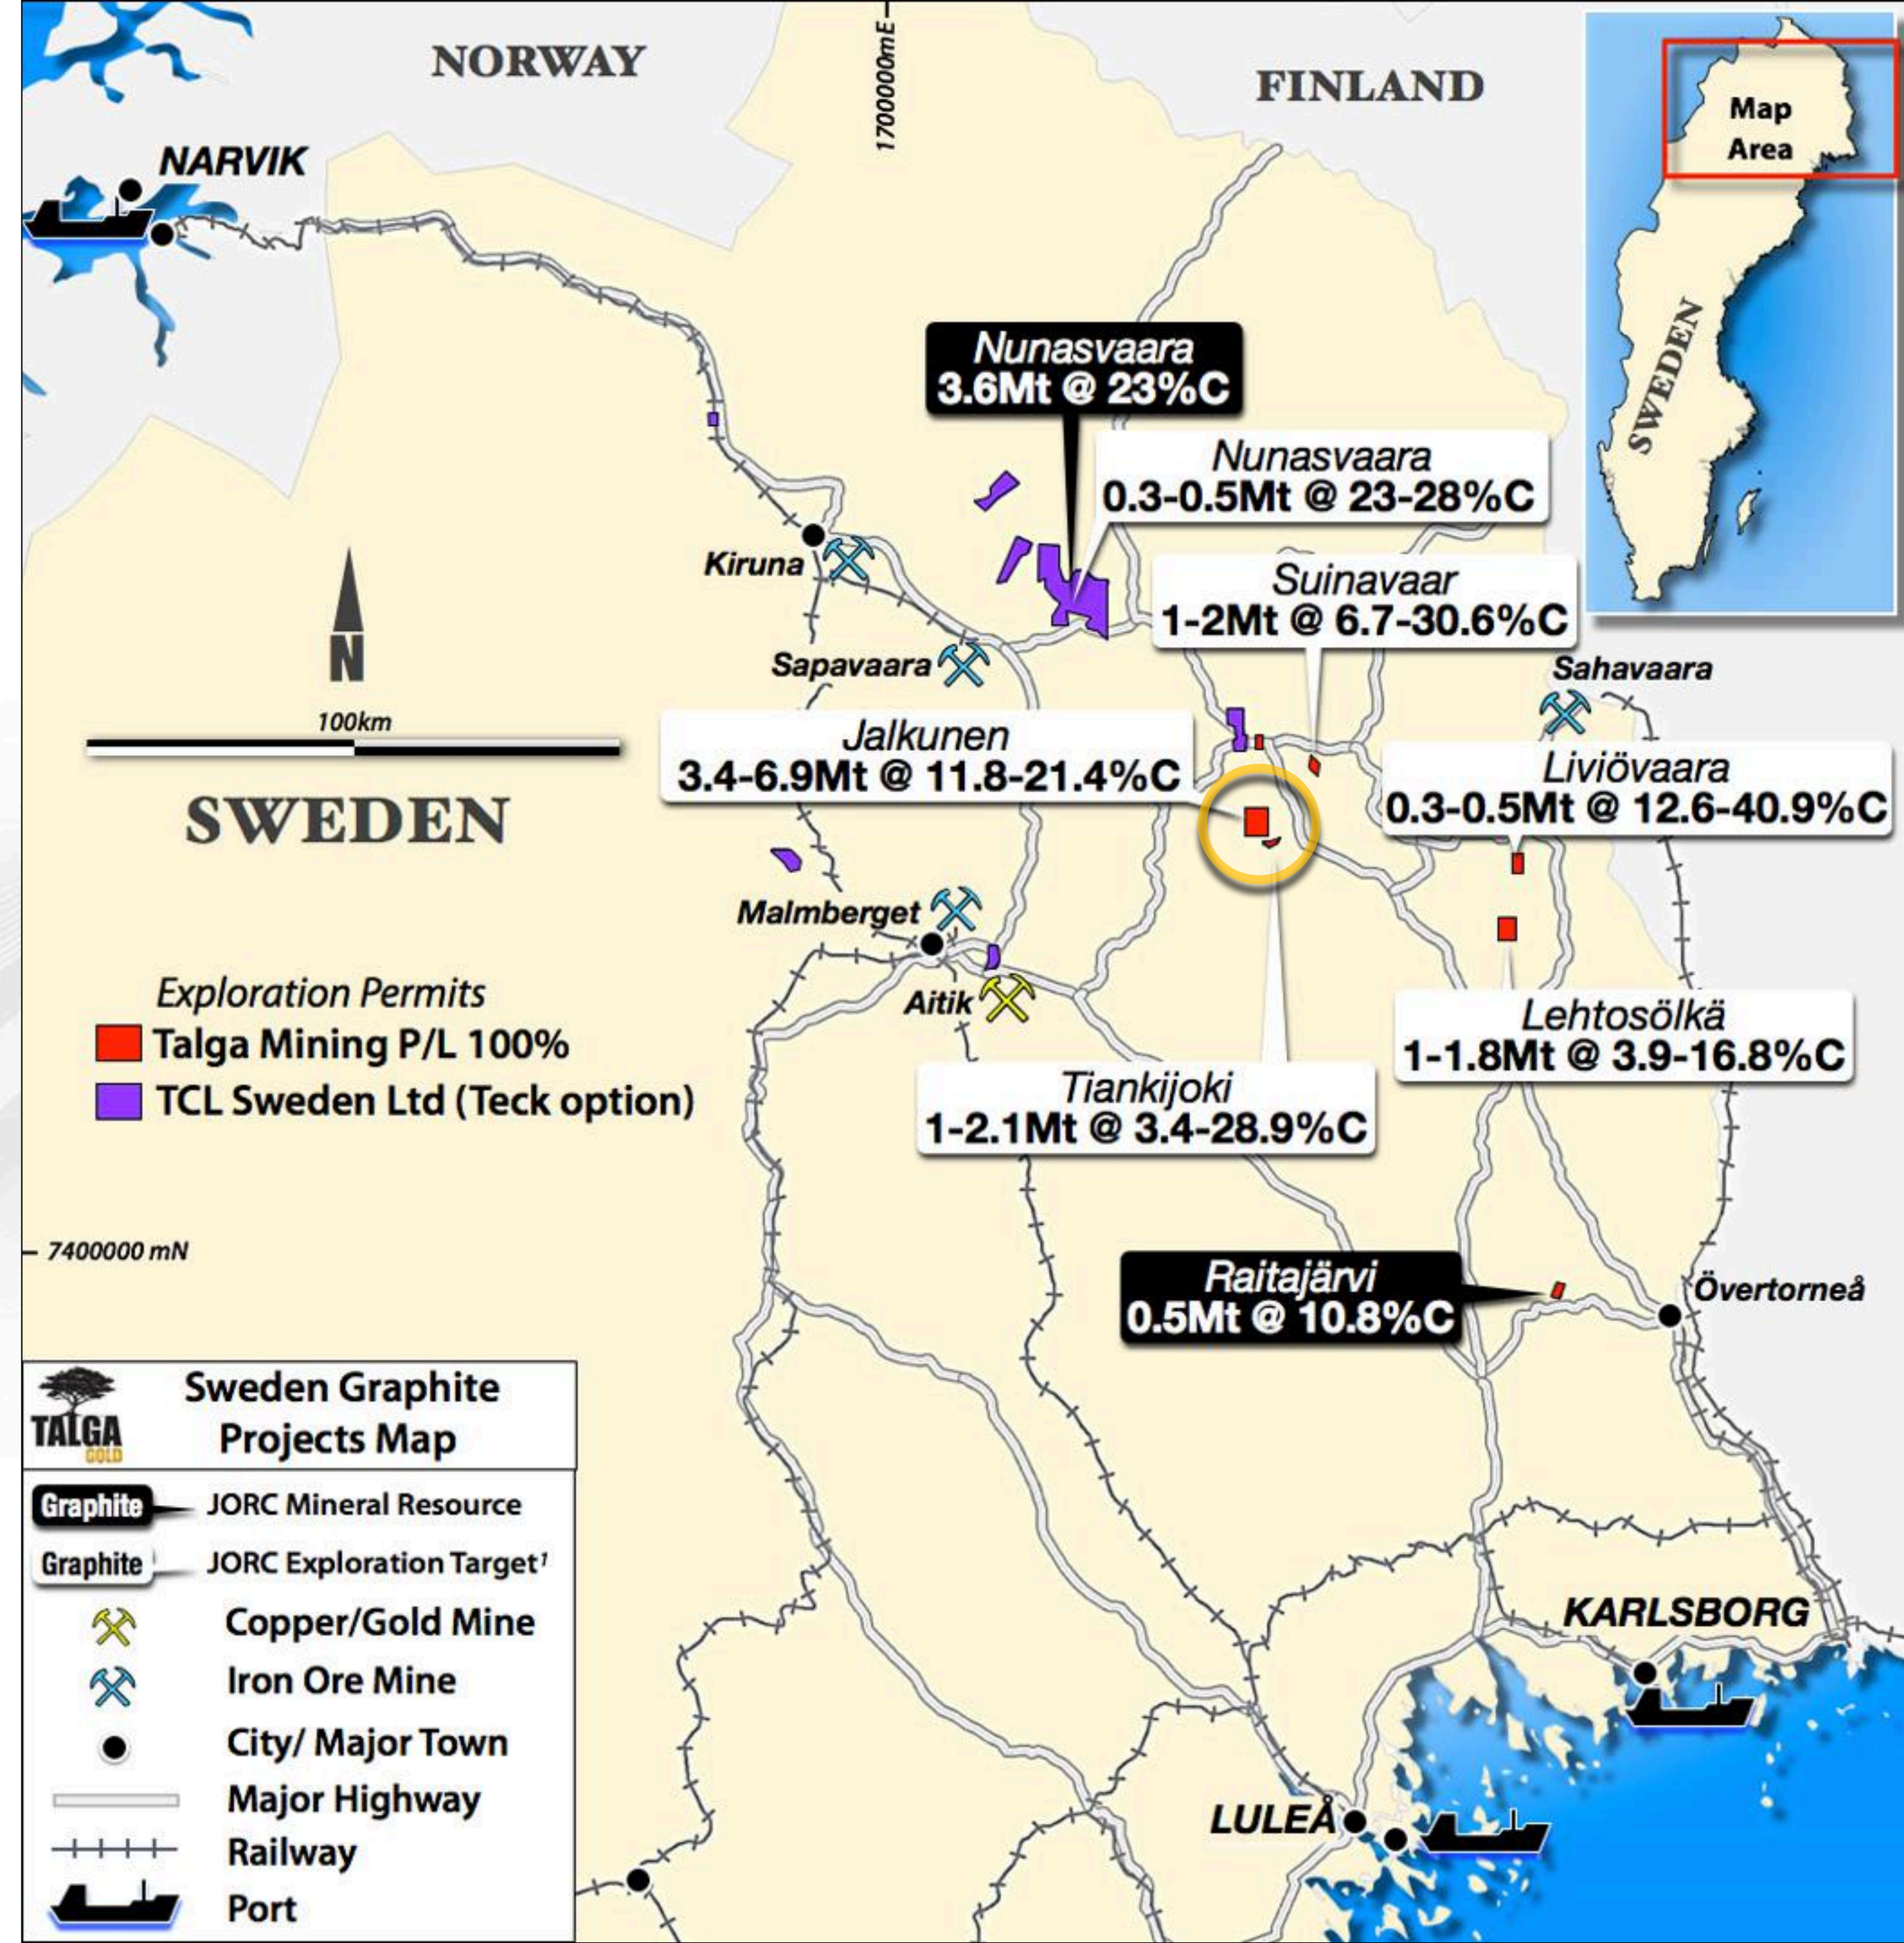

In addition to Nunasvaara and Raitajarvi Talga owns an additional 5 permits with JORC Code compliant graphite Exploration Targets¹ :

Jalkunen

- ▶ Exploration Target¹ **3.4 - 6.9Mt @ 11.8 - 21.4% C**
- ▶ 3 historic diamond holes by LKAB
- ▶ Graphite best intercepts: 16.8m @ 15.3% C
- ▶ Graphite flake sizes 0.05 - 0.15mm
- ▶ 2000m strike geophysical conductor

Tiankijoki

- ▶ Exploration Target¹ **1.0 - 2.1Mt @ 3.4 - 28.9% C**
- ▶ 14 historic diamond holes by LKAB, 5 intercepted graphite bearing schist
- ▶ Graphite best intercept 25.7m @ 27.7% C
- ▶ Graphite flake sizes <0.05mm -0.4 mm (Jumbo)

Exploration Projects *(Talga 100%)*

GRAPHITE

Lehtosölkä

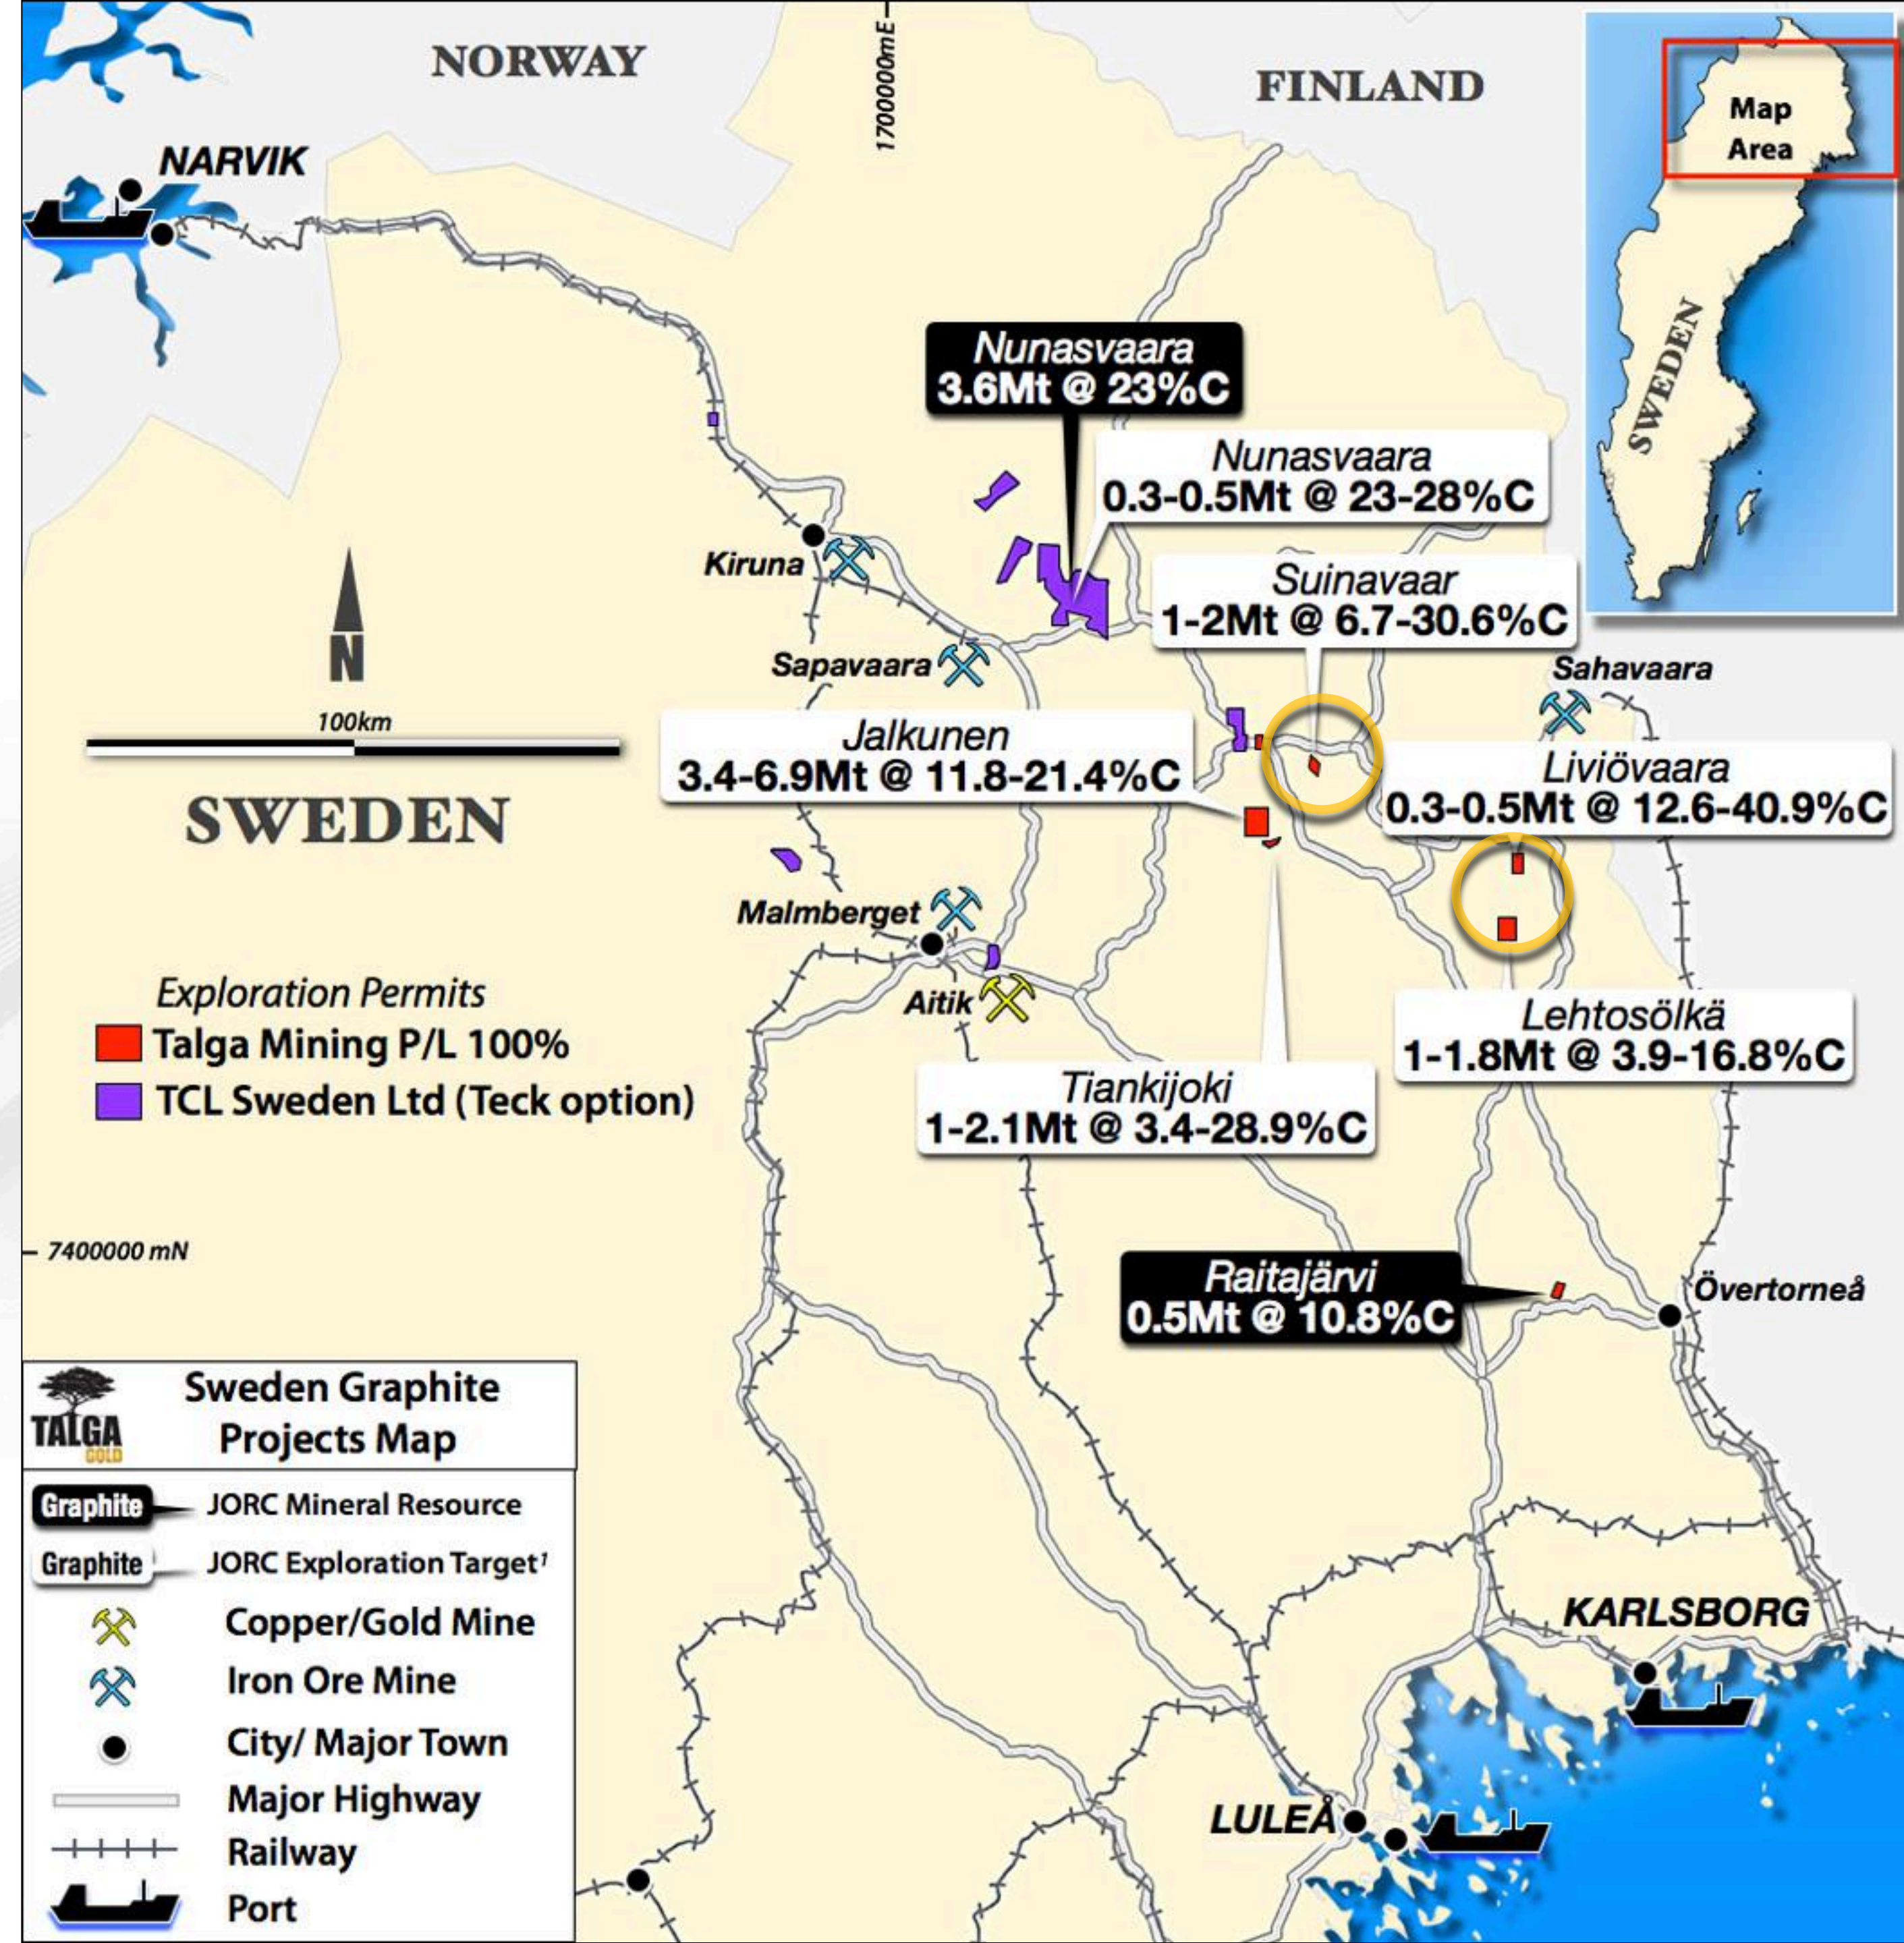

- ▶ Exploration Target¹ **1.0 - 1.8Mt @ 3.9 - 16.8%C**
- ▶ 5 historic diamond holes by SGU
- ▶ Best graphite intercept 19.5m @ 7.5% C
- ▶ Graphite flake sizes 0.1 mm and 0.3-0.4 mm. Approximately 20% >0.4 mm (Jumbo)

Liviövaara

- ▶ Exploration Target¹ **0.3 - 0.5Mt @ 12.6 - 40.9%C**
- ▶ 13 historic diamond holes by SGU and Anglo
- ▶ Graphite best intercepts: 4.6m @ 39.9% C
8.4m @ 30.2% C
- ▶ Graphite flake sizes <0.05 - 0.1mm
- ▶ 700m strike geophysical conductor

Suinavaar

- ▶ Exploration Target¹ **1.0 - 2.0Mt @ 6.7-30.6%C**
- ▶ 1 historic diamond hole by SGU
- ▶ Graphite best intercept 44.8m @ 19.4% C
- ▶ 1000m strike geophysical conductor

Advantage North Sweden

- ✓ **Technical** High grades graphite, JORC Mineral Resources established, substantial drilling on exploration targets
- ✓ **Transport** Excellent network of high quality road, rail and ports facilitate development , lower capex
- ✓ **Regulatory** Active, pro-mining jurisdiction with low flat tax rates - minerals 0.2% corporate 28%
- ✓ **Markets** Local demand in Sweden, UK, Germany, France, Belgium and India
- ✓ **Resources** Highly trained local workforce and support industries, pro-mining attitudes
- ✓ **Environment** Well established mining province, new projects being permitted and mined

Next Steps

- ▶ Re-sample historic drill core for more detailed graphite characterisation and metallurgy
- ▶ Due diligence on permits and TCL Sweden Ltd acquisition
- ▶ Commence drilling at Nunasvaara
- ▶ Complete new resource statements
- ▶ Commence scoping study

Reviewing core from TCL projects archived at Swedish Geological Survey, Sweden Feb 2012

Appendix 3

Talga Gold Ltd Resource Estimation Methodology

Masugnsbyn Iron Deposit: Inferred JORC compliant Resource

Drillhole data used in the Masugnsbyn Iron Resource estimate comprised a total of 18 diamond holes for 3284.25 metres drilled along the entire strike length of the deposit (2800 metres). Drill hole spacing was at nominal 200 metre centres with holes approximately 50 metres apart on each section.

Analysis was completed on all mineralised intervals at generally one metre or in some cases 2 metre sections of core by the Geological Survey of Sweden at the Kemiska Laboratory in Stockholm or the LKV laboratory in Kiruna.

A local grid was established for drilling using Geological Survey of Sweden surveyors assisted by theodolite surveying equipment giving an estimated location error of approximately 1m.

A bulk density of 3.60g/cm³ and lower cut off 15% Fe was applied to all historical measurements while maximum vertical depth of 210 metres from surface was used.

Interpretation of sections was completed with the outlines wireframed together to form coherent validated shapes. The grade estimation methods was ID2 of values lying within validated wireframes (solids) with only the numbers from the individual wireframes/solids used for the interpolation.

Parent block sizes were set at 5m (x), 20m (y) and 5m (z), with the sub-cell size down to half of the parent cell size. The resource estimate has been classified based on data density, data quality, confidence in the geological interpretation and confidence in the estimation.

Nunasvaara Graphite Deposit: Inferred JORC compliant Resource

Drillhole data used in the Nunasvaara Graphite Resource estimate comprised a total of 17 diamond holes for 1677.2 metres drilled along the entire strike length of the deposit (900 metres). Drill hole sections were at 500 -1000m spacing with single hole or variably inclined fans completed on each section. A number of costeans were excavated along surface expression of the graphite outcrop and systematically sampled at 1m intervals.

Analysis was completed on all mineralised drill intervals at standard two metre or in some cases <2 metre sections of core by the LKAB laboratory in Malmberget (sulphur and multi-elements) or SSAB laboratory in Luleå (Carbon by Leco/IR detector).

A local grid was established for drilling using government surveyors assisted by theodolite surveying equipment giving an estimated location error of approximately 1m.

A bulk density of 2.40g/cm³ and lower cut off 5% C was applied to all historical measurements while maximum vertical depth of 110 metres from surface was used.

Appendices *continued*

Appendix 3 continued

Talga Gold Ltd Resource Estimation Methodology.

Nunasvaara Graphite Deposit: Inferred JORC compliant Resource continued.

Interpretation on section was completed with the outlines wireframed together to form coherent validated shapes. The grade estimation methods was ID2 of values lying within validated wireframes (solids) with only the numbers from the individual wireframes/solids used for the interpolation.

Parent block sizes were set at 5m (x), 20m (y) and 5m (z), with the sub-cell size down to half of the parent cell size. The resource estimate has been classified based on data density, data quality, confidence in the geological interpretation and confidence in the estimation.

Raitajarvi Graphite Deposit: Inferred JORC compliant Resource

Drillhole data used in the Raitajarvi Graphite Resource estimate comprised a total of 13 diamond holes for 840 metres drilled along the entire strike length of the deposit (320 metres). Drill hole section spacing was at 20 - 80 metre centres with holes spaced approximately 15 - 50 metres apart on each section.

Analysis was completed on all mineralised drill core intervals as composite 0.6m to 3.2m half core by the Minpro AB laboratory in Storå (Carbon and sulphur - Leco/IR detector) or SGAB Analys laboratory in Luleå (ICP Fire Assay Au, Ag, Pt, Pd).

A local grid was established for drilling using government surveyors assisted by theodolite surveying equipment giving an estimated location error of approximately 1m.

A bulk density of 2.40g/cm³ and lower cut off 5% C was applied to all historical measurements while maximum vertical depth of 110 metres from surface was used.

Interpretation on section was completed with the outlines wireframed together to form coherent validated shapes. The grade estimation methods was ID2 of values lying within validated wireframes (solids) with only the numbers from the individual wireframes/solids used for the interpolation.

Parent block sizes were set at 5m (x), 20m (y) and 5m (z), with the sub-cell size down to half of the parent cell size. The resource estimate has been classified based on data density, data quality, confidence in the geological interpretation and confidence in the estimation.

Appendix 4

TCL Sweden Ltd Option

Talga Gold Limited ("Talga" or "the Company") has entered an option agreement to purchase TCL Sweden Ltd ("TCL"), a 100% subsidiary of Teck Resources Limited ("Teck"). TCL contains assets including iron, graphite and iron oxide copper-gold ("IOCG") projects in northern Sweden. Talga has paid US\$45,000 for the option until 30 June 2012, to purchase 100% of TCL for US\$433,500 and a 1% Net Smelter Royalty ("NSR"). An underlying 2% NSR is due to prior owner Phelps Dodge upon production.

References & Qualified Persons

References & Mineral Resource Qualification

1 The JORC Code compliant Exploration Targets are not to be construed as JORC Code compliant Mineral Resources. The JORC Code compliant Exploration Targets are based on historic diamond drill testing, airborne and ground geophysics, trench and bulk sampling conducted by the Geological Survey of Sweden and associated state companies that pre-date the creation of the JORC Code and so the potential quantity and grade of the Exploration Targets must be considered conceptual in nature. There has been insufficient exploration to define a JORC Code Mineral Resource and it is uncertain if further exploration, metallurgy and interpretation will result in the determination of a JORC Code Mineral Resource.

Competent Persons Statements for Exploration Targets and Mineral Resources

The information in this report that relates to Exploration Results is based on information compiled and reviewed by Mr Dylan Jeffriess who is a member of the Australian Institute of Geoscientists. Mr Jeffriess is a consultant to the Company and has sufficient experience which is relevant to the activity to which he is undertaking to qualify as a "Competent Person" as defined in the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves" ("JORC Code"). Mr Jeffriess consents to the inclusion in the report of the matters based on this information in the form and context in which it appears.

The information in this report that relates to Resource estimation is based on information compiled and reviewed by Mr Simon Coxhell. Mr Coxhell is a consultant to the Company and a member of the Australian Institute of Mining and Metallurgy. Mr Coxhell has sufficient experience relevant to the styles of mineralisation and types of deposits which are covered in this document and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves" ("JORC Code"). Mr Coxhell consents to the inclusion in this report of the matters based on this information in the form and context in which it appears.
