Central Asia Resources to double production at Dalabai

Second heap leach pad completed under budget and well ahead of schedule

Central Asia Resources Limited (ASX: CVR) is pleased to announce that it has completed construction of the second heap leach pad at its Dalabai Gold Project in Kazakhstan, Central Asia.

The second heap leach pad will allow Central Asia to double gold production at Dalabai to 2,000 ounces per month.

The Company completed the second heap leach pad for a total of US\$540,000 after originally budgeting US\$860,000, based on construction of the first heap leach pad at Dalabai. It also finished the pad more than two months ahead of schedule.

“The savings were made by doing a considerable amount of work in-house as opposed to using contractors,” Central Asia’s Executive Chairman Guy Warwick said.

“Mining and stacking of ore over the next three months will be required before there is a major impact on cash flow.

“We should have the conveyors for the second pad in operating condition by next week.”

The company will continue to keep shareholders updated about progress at Dalabai.
