

ASX ANNOUNCEMENT

11 March 2013

**NEW HIGH-GRADE GOLD VEIN SURFACE DISCOVERY AT LOBO,
BATANGAS, NEAR MANILA IN THE PHILIPPINES**
19m @ 9.77 g/t gold including 7m @ 23.58 g/t

Perth-based Red Mountain Mining Limited (ASX: RMX) ("the Company", "Red Mountain") today announced the discovery of a new high-grade epithermal gold vein at Lobo, within the Company's flagship Batangas gold project, located 100 kilometres south of Manila in the Philippines.

A continuous 19 metre surface channel of 1 metre spaced samples along the strike of an exposed epithermal quartz-barite vein produced an intersection of **19m @ 9.77 g/t gold** including **7m @ 23.58 g/t gold** and including **0.8m @ 94.78 g/t gold**.

The vein is at the western end of an extensive zone of anomalous gold soil geochemistry at Ulupong-Sawahan that extends for more than two kilometres in a northeast-southwest direction, sub parallel to the South West Breccia and West Drift epithermal gold vein systems that host high-grade gold resources and targets respectively (see **Figure 1** below). **Table 1** below lists the individual sample results and intervals.

Red Mountain Executive Chairman, Mr Neil Warburton:

"The new high-grade gold vein discovery at Ulupong, within the Lobo Gold Project at Batangas is a very exciting result which opens up potential for the discovery of high-grade shoots on a completely new system. Extensive surface mapping and trenching will continue in this area with follow up drilling planned in the near future. This new discovery along with extensions at Pica has extended the total strike length of the Lobo epithermal veins from 10 kilometres to more than 15 kilometres."

In addition, regional mapping at **Pica** has located extensions to this mineralised vein structure to the northeast of the "discovery" where previous drillhole PC-02, intersected a series of epithermal quartz-barite veins including 1.5m @ 8.53 g/t Au from 29.80m depth. The new zone links with the previously mapped Mir and Nagtoctoc zones, extending this structure for more than 3kilometres (see **Figure 1**). Systematic sampling of the new Pica extensions is in progress.

The new discoveries at Lobo take to five the number of major epithermal vein systems that have been identified at Lobo, for a total strike length of more than **15 kilometres**. Systematic drilling has only tested a 500 metre strike length of the systems to relatively shallow depth (200 metre vertically at West Drift, 120 metre vertically at South West Breccia). Zonation of high gold grades is evident at West Drift and on the South West Breccia structure, where upper levels on the structures are characterised by high copper-silver grades and the high grade gold zones occur at lower elevations.

The South West Breccia shoot, and the recent discovery at Ulupong, indicate exposure of the “gold zone” at surface. The drilling at West Drift is delineating a preserved high-grade gold zone. Further results from this program will be announced in due course.

Table 1: Ulupong Epithermal Vein Channel Sampling Results

For personal use only

BACKGROUND - LOBO GOLD PROJECT:

At Lobo, a series of epithermal lodes and breccias have now been mapped over a combined strike length of more than 15 kilometres. Previous drilling has only tested approximately a 500 metre strike length of the interpreted lode structures, to shallow depth of less than 200 metres. High-grade gold shoots have been identified at South West Breccia (Indicated Resource of 178,000 t @ 7.4 g/t Au 42,000oz Au and Inferred Resource of 16,000 tonnes @ 5.3 g/t Au; 3,000 oz Au) and the new West Drift gold discovery, the subject of on-going drilling. Regional trenching and channel sampling is identifying new veins/lodes and high-grade targets for further drilling, as discussed in this release.

About Red Mountain Mining Limited

Red Mountain Mining (ASX: RMX) is primarily a gold explorer and project acquisition company which listed on the ASX in September 2011. The Company's strategy is to unlock the potential of 'under-developed' gold and polymetallic projects in the greater Asian region by introducing Australian mining methods and improving efficiencies to gain significant production and exploration upside.

The Company completed the acquisition of significant gold resources and copper gold tenements in the Philippines on 30 October 2012. Since acquisition the company has focussed on upgrading the Batangas resources through discovery of new, high grade, gold zones at Archangel, and Lobo (eg West Drift, and now Ulupong). The company will continue drilling with the objective of increasing the size and grade of JORC compliant Mineral Resources at Batangas then completing a scoping study to demonstrate the viability of a potential high-margin gold project development.

Other gold opportunities will be reviewed on a continuous basis.

Competent Person Statement

The information in this report relating to Exploration Results is based on information compiled by Mr Jon Dugdale who is a Fellow of the Australasian Institute of Mining and Metallurgy and has sufficient exploration experience which is relevant to the various styles of mineralisation under consideration to qualify as a Competent Person as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Dugdale is a full time employee and Executive Director of Red Mountain Mining Ltd. Mr Dugdale consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The information in this report relating to Mineral Resources is based on information compiled by Mr Ted Coupland who is a member of the Australasian Institute of Mining and Metallurgy and has sufficient experience which is relevant to the various styles of mineralisation under consideration to qualify as a Competent Person as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Coupland is a former full time employee of Cube Consulting Pty Ltd. Mr Coupland consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
