OVERSUBSCRIBED SHARE PLACEMENT

Voyager Resources Limited (the Company) is pleased to announce that it has agreed to place 160 million shares at \$0.016 per share to raise approximately \$2.56 million before costs to clients of Patersons Securities Limited (Patersons), a leading Australian brokerage house. Patersons acted as lead Manager to the Placement.

Funds raised pursuant to the Placement will be used primarily to underpin the Company's exciting exploration programme at its flagship project at Khul Morit in Mongolia (figure 1).

The Placement, which was strongly oversubscribed, will be completed under the company's placement capacity as defined under ASX Listing Rule 7.1A and will not require shareholder approval.

The Company looks forward to the next phase of drilling, which should recommence in April 2013.

Figure 1: Voyager Resources Project Locations

Table 1. Use of funds pursuant to Placement

	A\$
On going deep drilling programme	1,900,000
Additional geophysical work to support drilling targets	250,000
Expenses of the offer	160,000
Working capital	250,000
Total	2,560,000

About Voyager Resources Limited

The Company's flagship Khul Morit Project (Figure 1) is located in the Erdene Island Arc Terrain, which is one of a number of tectonic terrains that extend across the Gobi and southern regions of Mongolia that have been proven to host a number of mineralised copper porphyry systems, including the giant Oyu Tolgoi deposit.

The geological and alteration signatures at Khul Morit are typical of large copper porphyry systems globally. In particular, the quartz tourmaline breccias which indicate a high level copper mineralised porphyry system, and the classic phyllic alteration which are typical of the low level core of a porphyry system. These are both favourable indications and support the Company's view that Khul Morit has the potential to host a significant copper porphyry system.
