Anteo Files Two Patent Applications in Novel Biological Fields

- **Two provisional patent applications filed - “Conjugating Molecules to Particles” and “Coating of Particles”**
- **Patent applications expand on existing patented Mix&Go™ technology**
- **New patents will, if granted, provide protection in novel biological fields including bioseparations**
- **More patentable material expected from ongoing work**

26 August 2013: Anteo Diagnostics Limited (ASX: ADO) is pleased to announce that the company has filed two new patent applications with the Australian Patent Office. If they are granted in Australia, and in the additional international jurisdictions in which they will be filed, these patents will provide protection in novel biological fields and broaden the fields of use of our existing patent portfolio.

The provisional applications have been filed over the past two weeks, with the “Conjugating Molecules to Particles” patent being filed on August 13 and the “Coating of Particles” patent being filed on August 20.

Anteo has twelve months from the date of filing to reduce each of these patent applications to practice and broaden the scope of the patents. The content of the patent applications will remain out of the public domain until they enter the PCT phase in 12 months time.

The “Conjugating Molecules to Particles” and “Coating of Particles” patent applications expand and build on our existing patent portfolio and broaden the field of use to new areas such as the commercially valuable market sector of bioseparations. These new applications continue to be based on our core, Mix&Go™, technology.

Anteo believes there is potential for further patentable material to emerge as we work to further exemplify the existing filings.

Anteo's Chief Executive Officer Dr. Geoff Cumming said: "Protecting the Mix&Go™ technology and its potential uses remains an ongoing priority for Anteo and the developments announced today are pleasing. We look forward to ensuring that we secure as strong a position as is possible in these key strategically important areas of great commercial need. We look forward to updating shareholders on this outcome."
