

Suite 4, Level 3 South Shore Centre 85 South Perth Esplanade South Perth WA 6151 TEL +61 8 6313 3800 FAX +61 8 6313 3888 ABN 38 108 779 782

Silver Lake Resources Ltd ("Silver Lake" or "the Company") is pleased to presept this Quarterly Activities Report.

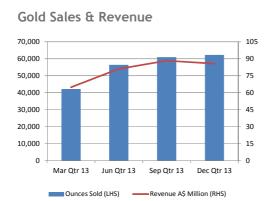

Les Davis Managing Director

QUARTERLY ACTIVITIES REPORT

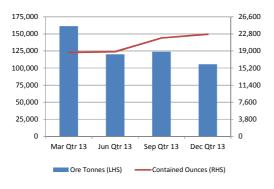

For the quarter ended 31 December 2013

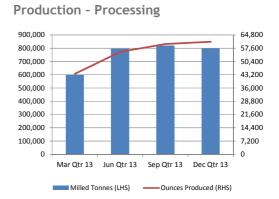

Highlights

- Record quarterly production:
 - Group gold production totalling 61,152 ounces
 - Group gold sales totalling 62,265 ounces
 - Group guidance increased from 180-200koz to 205-220koz
- Mount Monger Operations
 - Mill production of 47,928 ounces
 - Mine production of 39,086 ounces
 - Guidance increased from 120-130koz to 160-170koz
- Murchison Gold Operations
 - Mill production of 13,224 ounces
 - Mine production of 15,993 ounces
 - Strategic review in progress
- Cash & Bullion on hand totalling A\$17 million
- Debt reduced from A\$20 million to A\$8 million

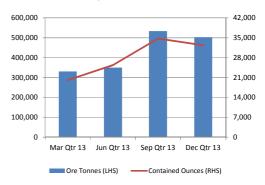

Production - Underground

Production - Open Pit

Quarterly Overview

Group Safety

There were two lost time injuries across the Group during the quarter. The 12 month moving average Lost Time Injury Frequency Rate ("LTIFR") for the December 2013 quarter increased from 1.19 to 2.45. This LTIFR remains below the gold industry LTIFR rate of 3.10.

Group Operations

Ore mined for the quarter totalled 608,158 tonnes resulting in contained gold in ore production of 55,079 ounces.

Ore milled for the quarter totalled 797,393 tonnes at a blended grade of 2.6 g/t Au for 61,152 recovered ounces. Unprocessed ore stocks available for mill feed at the end of the quarter are ~1.5 million tonnes containing ~60,000 ounces of gold.

Gold bullion sold for the quarter was $\underline{62,265}$ ounces at an average realised price of A\$1,371/oz for A\$85.3 million revenue. Bullion refined and not sold at the end of the quarter totalled 1,950 ounces. Silver Lake had no hedging in place at the end of the quarter.

Group Operations - Mining	Units	Jun Qtr 2013	Sep Qtr 2013	Dec Qtr 2013	Year To Date FY14	Full Year FY13

Table 2: Group Operations - processing statistics

Guidance

Group guidance has increased from 180,000 to 200,000 ounces of gold to 205,000 to 220,000 ounces of gold.

Guidance for Mount Monger Operations has been increased from 120,000 to 130,000 ounces of gold to 160,000 to 170,000 ounces of gold. The Lakewood & Randalls mills will continue to be fed with underground ore from the Daisy Complex and small quantities of ore from Cock-eyed Bob, open pit ore from the Maxwells deposit and continued processing of surface stockpiles.

Guidance for the Murchison Gold Operations has been reduced from 60,000 to 70,000 ounces of gold to 45,000 to 50,000 ounces of gold. This guidance may change subject to the outcome of the strategic review that is in progress. Results of the strategic review will be released in the March 2014 quarter.

Group Finance (unaudited)

Cash & bullion on hand as at 31 December 2013 totalled A\$17 million with bank debt reduced from A\$20 million to A\$8 million (refer to figure 1 for quarterly cash & bullion movement). Remaining bank debt will be fully repaid by 28 February 2014. No hedging was in place at the end of the quarter. Operating cashflow for the quarter was A\$14 million.

Table 3: Unaudited all in sustaining cash costs for Mount Monger Operations - please refer to below notes.

Notes for tables 3 & 4

1 Costs for underground & open pit operating activities (including infill and grade control drilling) and open pit waste development at average strip ratio.

2 Costs for site administration including camp fly in/fly out costs and corporate recharges.

3 Processing costs include costs of haulage from mine to mill. The Mount Monger costs comprise the Lakewood and Randalls mills.

4 Corporate overheads for the Sep and Dec 2013 quarters are post recharges to sites.

5 Costs include underground decline development, development ahead of mining and sustaining capital works.

6 These costs are included in the calculation of all in sustaining cost based on guidance from the World Gold Council.

Quarterly gold sales from Mount Monger Operations totalled 49,120 oz. Unaudited all in sustaining cash costs (before non-cash items) for the quarter was A\$1,002 oz compared to A\$1,030 oz in the previous quarter.

Table 4: Unaudited all in sustaining cash costs for Murchison Gold Operations - please refer to notes below table 3.

Quarterly gold sales from the Murchison Gold Operations totalled 13,146 oz. Unaudited all in sustaining cash costs (before non-cash items) for the quarter was A\$2,042 oz.

The fall in gold price in mid-2013 resulted in the deferment of capital required for underground mining and hence access to higher grade ore. Notwithstanding efforts to date to produce ore from open pit sources only and conserve cash, the unit costs remain high due to lower grades.

A full strategic review of the operation is in progress and the results of the review will be announced in the March 2014 quarterly report.

For further detail regarding the quarterly activities report please refer to following appendix.

Appendix

Mount Monger Operations

There were two lost time injuries at Mount Monger Operations during the quarter. The injuries sustained were both associated with 'slips, trips and falls' and 'manual handling'.

Ore mined for the quarter:

- Mount Monger underground totalled 105,562 tonnes resulting in gold in ore production of <u>22,742</u> ounces; and
- Mount Monger open pit totalled 200,078 tonnes resulting in gold in ore production of <u>16,344</u> ounces.

Combined ore mined for the quarter totalled 305,640 tonnes resulting in gold in ore production from the Mount Monger Operations of $\underline{39,086}$ ounces.

Ore milled for the quarter totalled 506,812 tonnes at a blended grade of 3.1 g/t Au for $\frac{47,928}{1.3}$ recovered ounces. Unprocessed ore stocks available for mill feed at the end of the quarter are ~1.3 million tonnes containing 54,000 ounces.

Mount Monger Operations - Mining	Units	Jun Qtr 2013	Sep Qtr 2013	Dec Qtr 2013	Year To Date FY14	Full Year FY13

Table 8: Mount Monger Operations - Randalls processing statistics

Notes to Tables 5 to 8:

1: Ore milled is from all sources including stockpiled material.

2: 100% of ore from the underground operations was processed at Lakewood plant during the quarter.

• Underground production & development - Daisy Complex

Production:

Gold in ore production during the quarter was sourced from, Daisy Milano, Haoma, Western Make & Rosemary underground mines (refer to figures 4 & 5) totalling 98,694 tonnes at an average grade of 6.9 g/t Au for 21,778 oz. Mined grade was 21% higher than the previous quarter.

Ore development for the quarter totalled 579 metres.

Waste development:

592 metres of capital development and 208 metres of ore access development were undertaken during the quarter.

Underground production & development - Cock-eyed Bob

A key part of Silver Lake's strategy at Randalls is to unlock the potential of the Banded Iron Formation (BIF) deposits. The BIF host rock at Randalls covers an area of over 30 kilometres and the gold distribution along the BIF contains limited historic drilling with highly encouraging results (refer to figure 7). The BIF host rock requires further interpretation but has the potential to contain large gold deposits similar to the Santa, Maxwells & Cock-eyed Bob deposits.

Ore development is continuing at the Cock-eyed Bob underground mine (refer to figures 2 & 4) to obtain additional geological knowledge of BIF deposits in the region. Ore development in December 2013 on the 396 level has returned highly encouraging results with some diluted face grades averaging >10 g/t Au and >1.0 ounce per tonne (refer to figures 2 & 3). Ore driving to date has shown that the highest grade sections of the deposit occur the same as Daisy Milano where the mineralisation contains sulphide rich rock such as pyrrhotite (refer to figures 2 & 3).

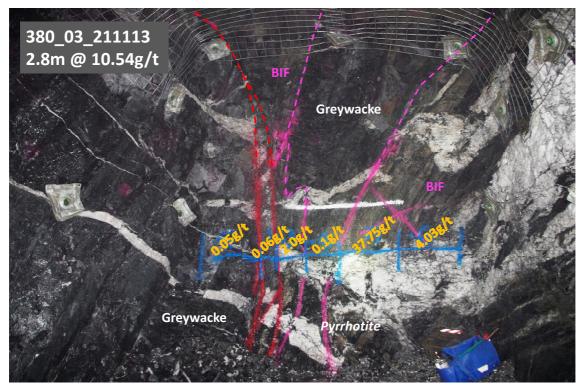

Figure 2: Cock-eyed Bob ore development face on 396 level showing diluted mined grade of 10.54 g/t Au.

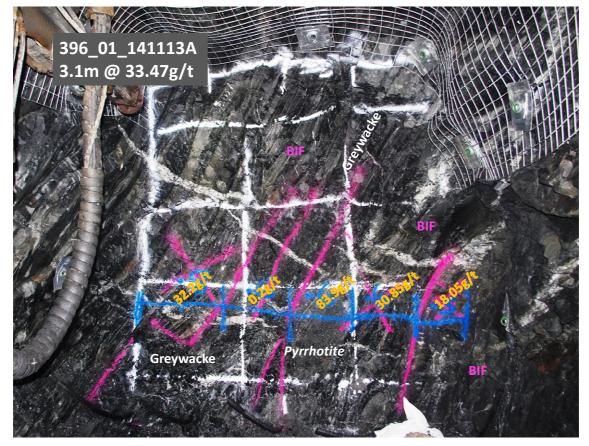

Figure 3: Cock-eyed Bob ore development face on 396 level showing diluted mined grade of 33.47 g/t Au.

Production:

Gold in ore production during the quarter totalled 6,868 tonnes at an average grade of 4.4 g/t Au for 964 oz. Mined grade was 29% higher than the previous quarter.

Ore development for the quarter totalled 300 metres.

Waste development:

No waste development was carried out during the quarter.

Open pit production

Gold in ore production during the quarter was sourced from Maxwells open pit (refer to figure 4) totalling 200,078 tonnes at an average grade of 2.5 g/t Au for 16,344 oz. High grade ore mined for the quarter totalled 132,571 tonnes at 3.12 g/t Au for 13,299 ounces with 67,507 tonnes at 1.40 g/t Au for 3,045 ounces mined from lower grade blocks to access the higher grade blocks.

456,736 cubic metres of waste were removed during the quarter at a strip ratio of 6.9:1 (waste to ore) down from 7.4:1 in the previous quarter. The latest grade control drilling programme has Maxwells open pit continuing until May 2014 at which time infill drilling will commence for underground mine planning purposes.

There was no open pit production from the Wombola pits during the quarter. Processing of previously mined stockpiles continued throughout the quarter.

Gold Production - Lakewood Plant

Tonnes milled for the quarter totalled 202,405 tonnes at a blended grade of 4.3 g/t Au for 26,553 recovered ounces.

The mill was relined and minimal unplanned downtime was incurred during the quarter.

Gold Production - Randalls Plant

Tonnes milled for the quarter totalled 304,407 tonnes at a blended grade of 2.3 g/t Au for 21,375 recovered ounces.

The mill was relined and minimal unplanned downtime was incurred during the quarter.

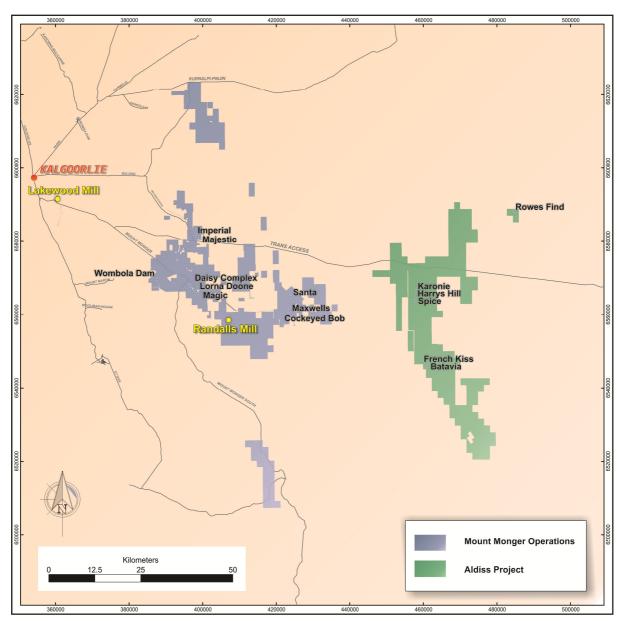

Figure 4: Mount Monger Operations location plan.

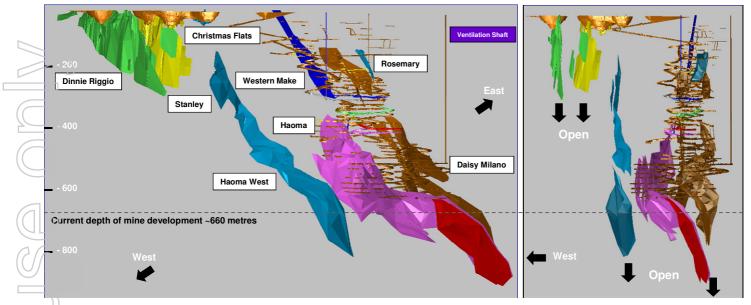

Figure 5: Schematic view showing the mines that make up the Daisy Complex that contain over 1.4 million ounces of resource accessible from the same infrastructure. Includes current drilling envelope at Haoma West, Western Make, Christmas Flats and Dinnie Riggio (not to scale).

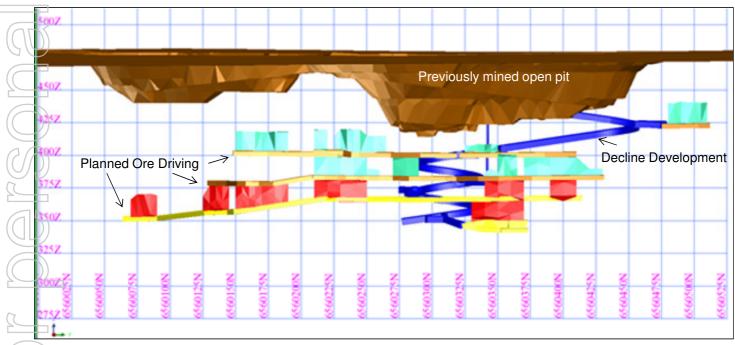

Figure 6: Schematic view of Cock-eyed Bob showing previously mined open pit, decline development & planned ore driving (not to scale).

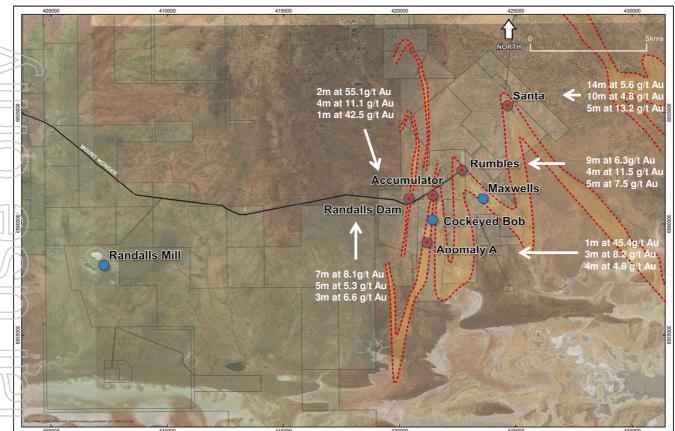

Figure 7: Aerial view of over 30 km of BIF host rock (shaded) showing Maxwells and Cock-eyed Bob mines and historic drilling results at other highly prospective targets along the BIF sequence

Murchison Gold Operations

There were no lost time injuries at the Murchison Gold Operations during the quarter.

Ore mined for the quarter totalled 302,518 tonnes resulting in gold in ore production from the Murchison open pit operations of <u>15,993</u> ounces.

Ore milled for the quarter totalled 290,518 tonnes at a blended grade of 1.6 g/t Au for $\underline{13,224}$ recovered ounces. Metallurgical recovery for the quarter was 87% as expected which reflects the introduction of higher sulphide ore sources from the Comet area pits.

The mill was relined during the quarter and the tertiary crusher underwent major repairs.

Unprocessed ore stocks available for mill feed at the end of the quarter are ~197,000 tonnes containing 5,700 ounces.

Table 10: Murchison Gold Operations - processing statistics

Commercial production was declared at the Murchison Gold Operations on 1 June 2013. Prior to that period, operating costs, associated revenues and finance charges were capitalised.

Open pit production

Ore during the quarter was sourced from 5 open pit mines being: Exodus, Eclipse, Comet North, Venus & Mercury (refer to figure 8). 0.6 million cubic metres of waste were removed during the quarter at a strip ratio of 5.2:1 (waste to ore) down from 7.9:1 in the previous quarter. Life of mine strip ratios over all planned open pit sources are 7:1 (waste to ore).

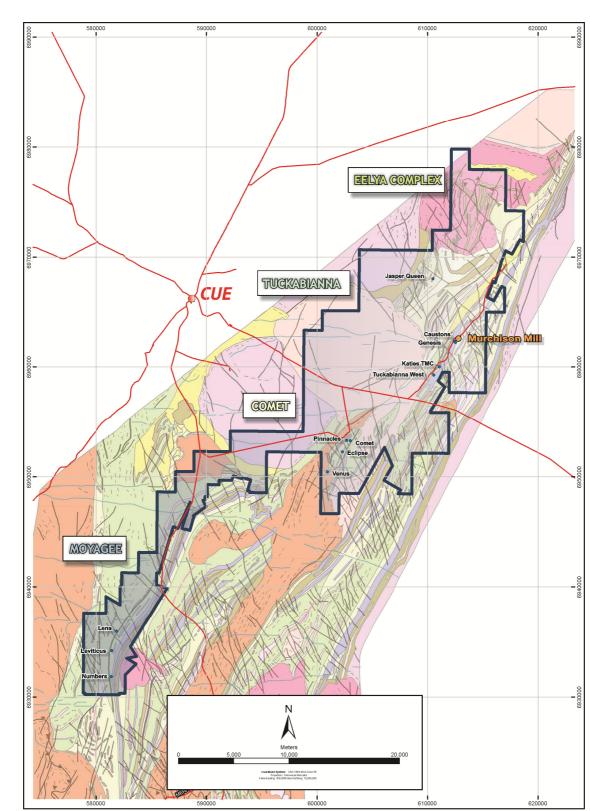

Figure 8: Murchison projects location plan.

Resources & Reserves

The JORC Gold Resource as at June 2013 totalled 6.4 million ounces inclusive of 1.7 million ounces of ore reserves as detailed below.

About Silver Lake Resources Ltd:

Silver Lake is a large, all-Australian, ASX 200 gold producing and exploration company with multiple mines and multiple mills operating in the Eastern Goldfields and Murchison districts of Western Australia.

Silver Lake's land position in Western Australia covers 5,000 sqkm of highly prospective under explored tenements containing gold, silver, copper & zinc.

Silver Lake currently has JORC Resources and JORC Ore Reserves containing:

- ➢ 6.4 million ounces of gold inclusive of 1.7 million ounces of reserve;
- > 10.5 million ounces of silver; and
- > 134,000 tonnes of copper.

Nearby to the Murchison project is the Eelya Complex, which is prospective for gold and base metals. A high grade copper/gold discovery has already been made at the Hollandaire deposit which contains copper, gold & silver.

In the Great Southern, Silver Lake owns the large Kundip and Munglinup exploration projects covering over 2,500 sqkm.

Silver Lake has a commitment to long term exploration targeting¹ 10 million oz Au over time.

Competent Person's Statement

The information in this report that relates to Exploration Results, Mineral Resources and Ore Reserves is based on information compiled by Mr Christopher Banasik who is a Member of the Australasian Institute of Mining and Metallurgy. Mr Banasik is a full time employee of Silver Lake Resources Ltd, and has sufficient experience which is relevant to the style of mineralisation under consideration to qualify as a Competent Person as defined in the 2004 edition of the JORC Code. Mr Banasik has given his consent to the inclusion in the report of the matters based on the information in the form and context in which it appears.

1: Information that relates to exploration and production targets refers to targets that are conceptual in nature, where there has been insufficient exploration to define a Mineral Resource and it is uncertain if further exploration will result in the determination of a Mineral Resource.

The information on exploration targets are based on a conceptual range of targets as follows:

Tonnage range:	80 million to 120 million tonnes
Grade:	~3 g/t Au

Ounces:

7 million to 10 million
