Update: Easing Weather Impact - Nullagine Mine Operations

The Company provides further advice on the current weather related impacts on normal operation of its gold project.

The key supply route Newman to Marble Bar road has now opened allowing supply of fuel and critical consumables (particularly fuel) to recommence over the next 24 hours. The alternative route Marble Bar to Port Hedland is yet to open.

As previously advised, to conserve fuel mining was suspended from the open pits and the processing plant was being supplied ore from existing stockpiles. In the meantime, the Company took the opportunity to bring forward a planned processing plant maintenance shutdown. The plant will restart after the maintenance is completed on Tuesday 4 February, and fuel and reagents reach the mine site. Mining activity and ore haulage is expected to recommence within the next 48 hours. Fortunately the Company has not had to take further action alluded to in the announcement dated 31 January 2014.

About Millennium Minerals

Millennium Minerals Limited operates the Nullagine Gold Project, located in the East Pilbara Region of Western Australia. The Project comprises 7 deposits on granted mining leases. The largest deposit, Golden Eagle, is located approximately 10 km south of the township of Nullagine. The 1.5 Mtpa CIL process plant was commissioned and first gold poured in September 2012.
