

Hi, we're

brainchip 

Disclaimer

This presentation is not a prospectus nor an offer for securities in any jurisdiction nor a securities recommendation. The information in this presentation is an overview and does not contain all information necessary for investment decisions. In making investment decisions in connection with any acquisition of securities, investors should rely on their own examination of the assets and consult their own legal, business and/or financial advisers.

The information contained in this presentation has been prepared in good faith by Brainchip holdings limited, however no representation or warranty expressed or implied is made as to the accuracy, correctness, completeness or adequacy of any statements, estimates, opinions or other information contained in this presentation.

To the maximum extent permitted by law, Brainchip holdings limited, its directors, officers, employees and agents disclaim liability for any loss or damage which may be suffered by any person through the use or reliance on anything contained in or omitted in this presentation.

Certain information in this presentation refers to the intentions of Brainchip holdings limited, but these are not intended to be forecasts, forward looking statements or statements about future matters for the purposes of the corporations act or any other applicable law. The occurrence of events in the future are subject to risks, uncertainties and other factors that may cause Brainchip's actual results, performance or achievements to differ from those referred to in this presentation. Accordingly, Brainchip holdings limited, its directors, officers, employees and agents do not give any assurance or guarantee that the occurrence of the events referred to in the presentation will actually occur as contemplated.

**You're about to
see a brand new
technology.**

**There's a lot to absorb,
so get comfy.**

**Nearly everyone
has a smartphone.**

But what makes
a smartphone smart?

Its “brain”.

However, phones
are programmed
to be smart,
using hardware
and software.

**We have a technology
that is truly smart.**

And it's orders of magnitude faster
than current technologies

**It's called Spiking
Neuron Adaptive
Processor technology.**

And it has a handy acronym: SNAP.

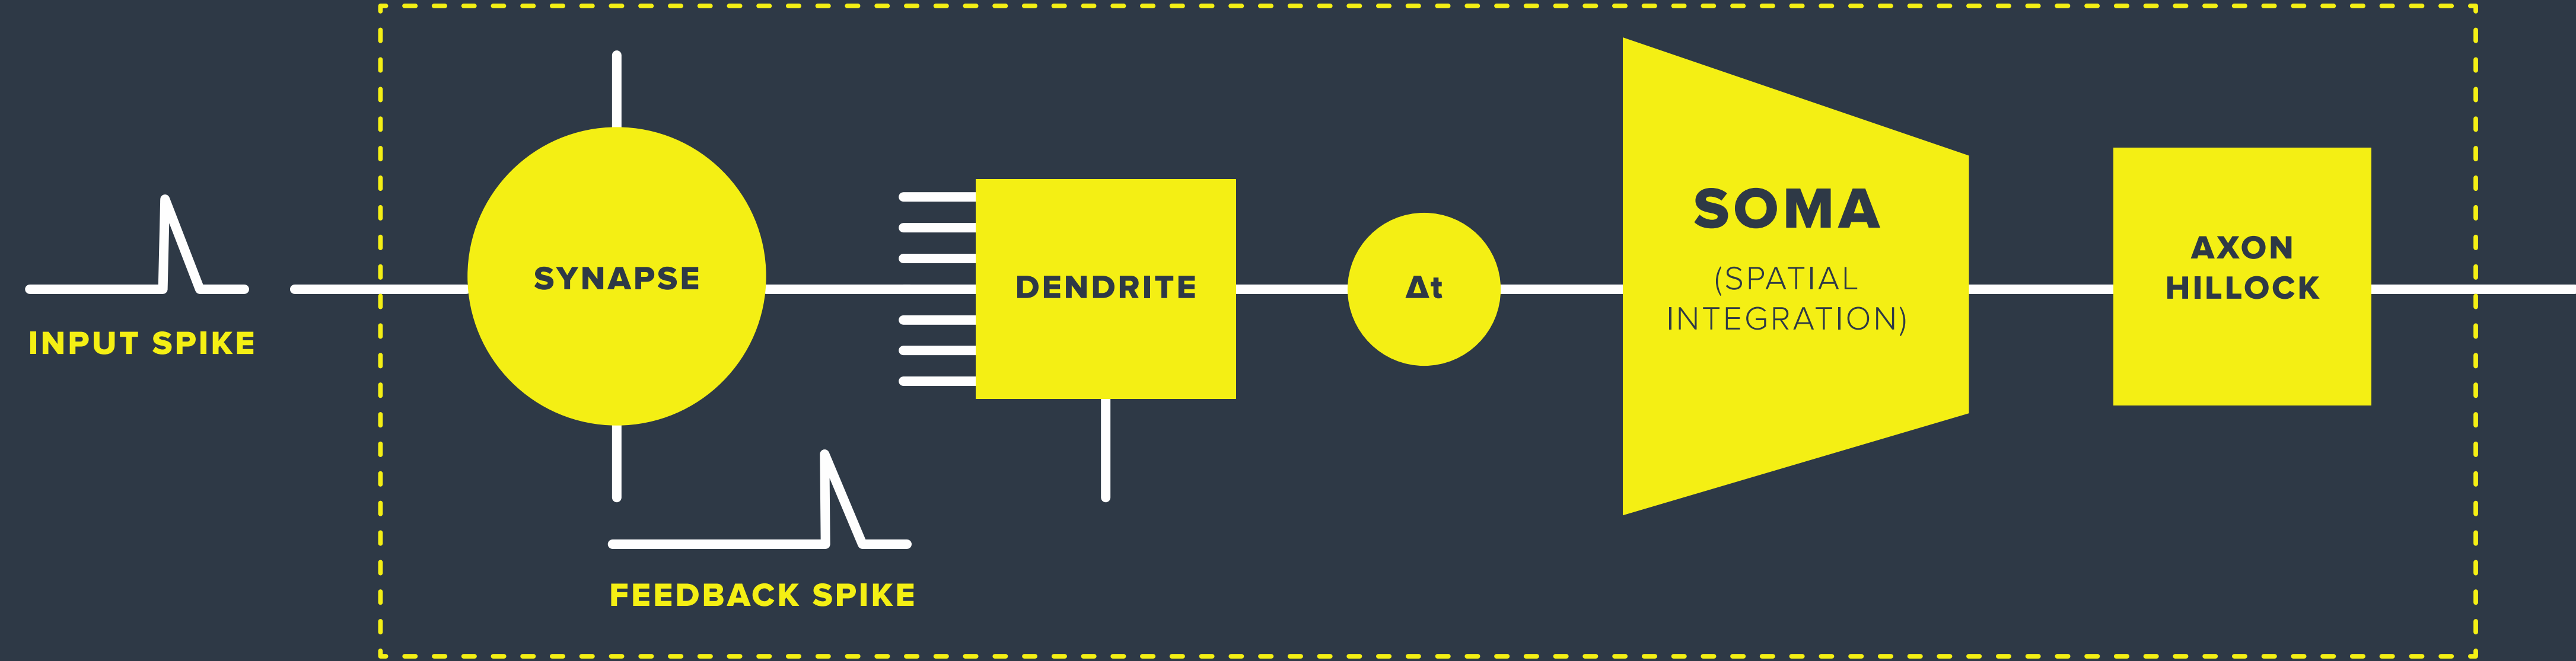

**We've been developing SNAP
for over 10 years and its
capabilities go far beyond
speed improvements.**

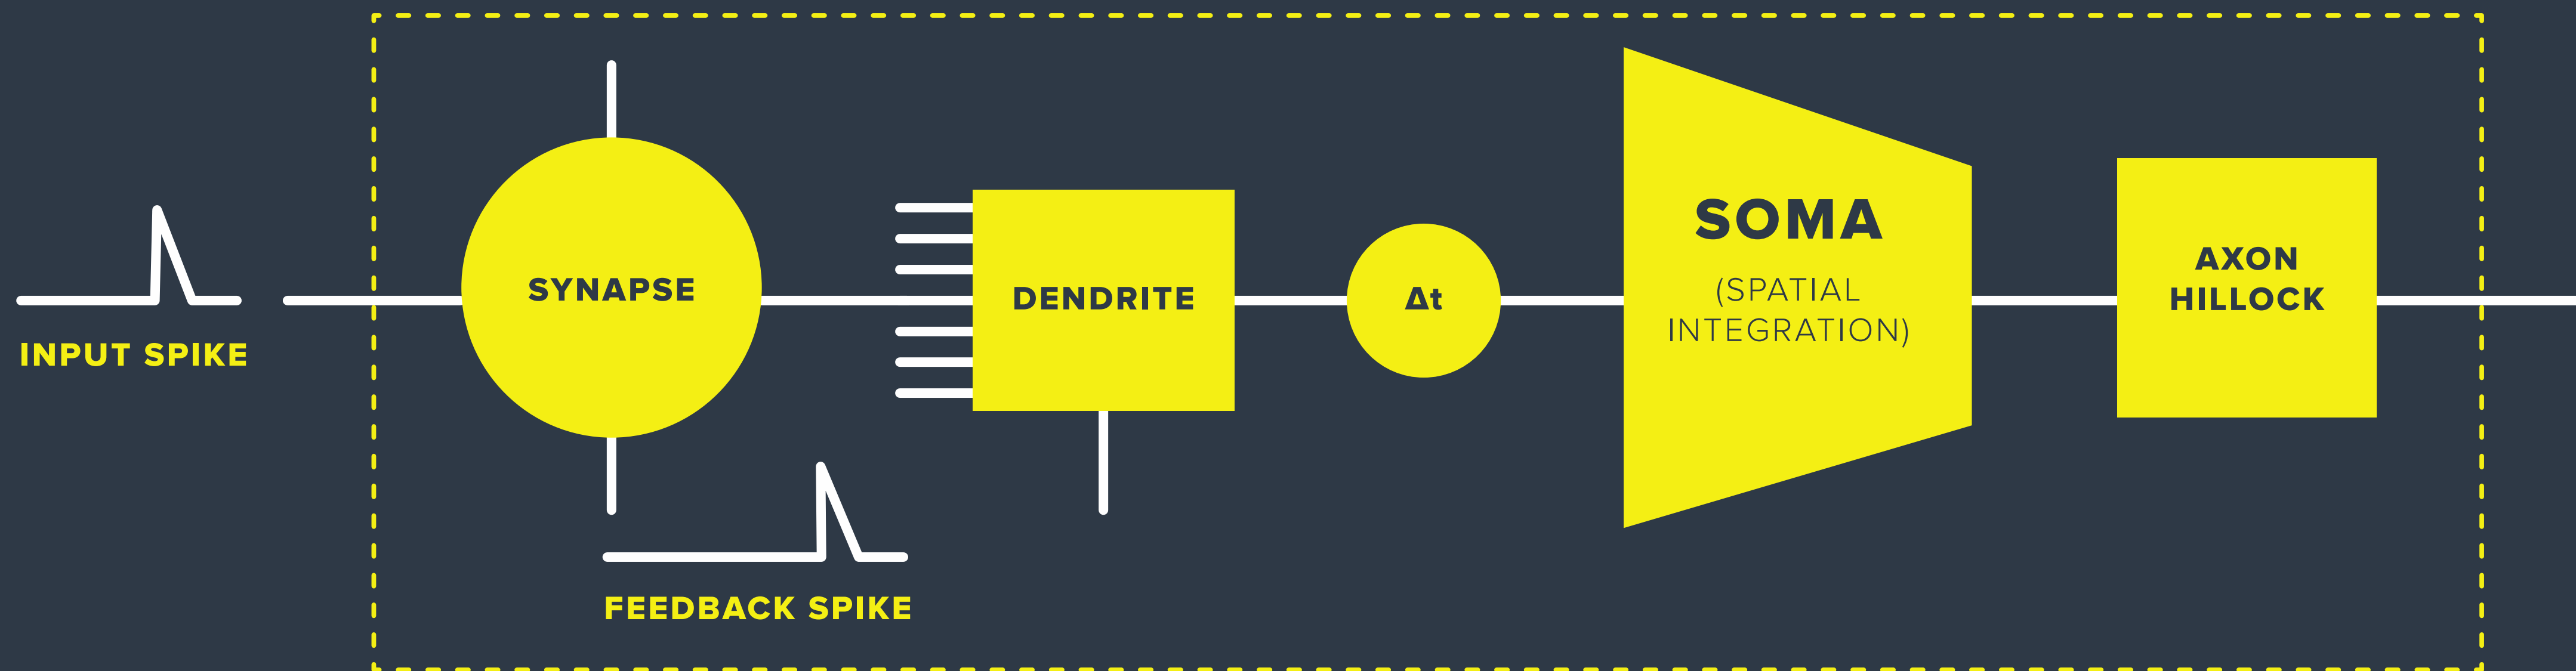

So how does it work?

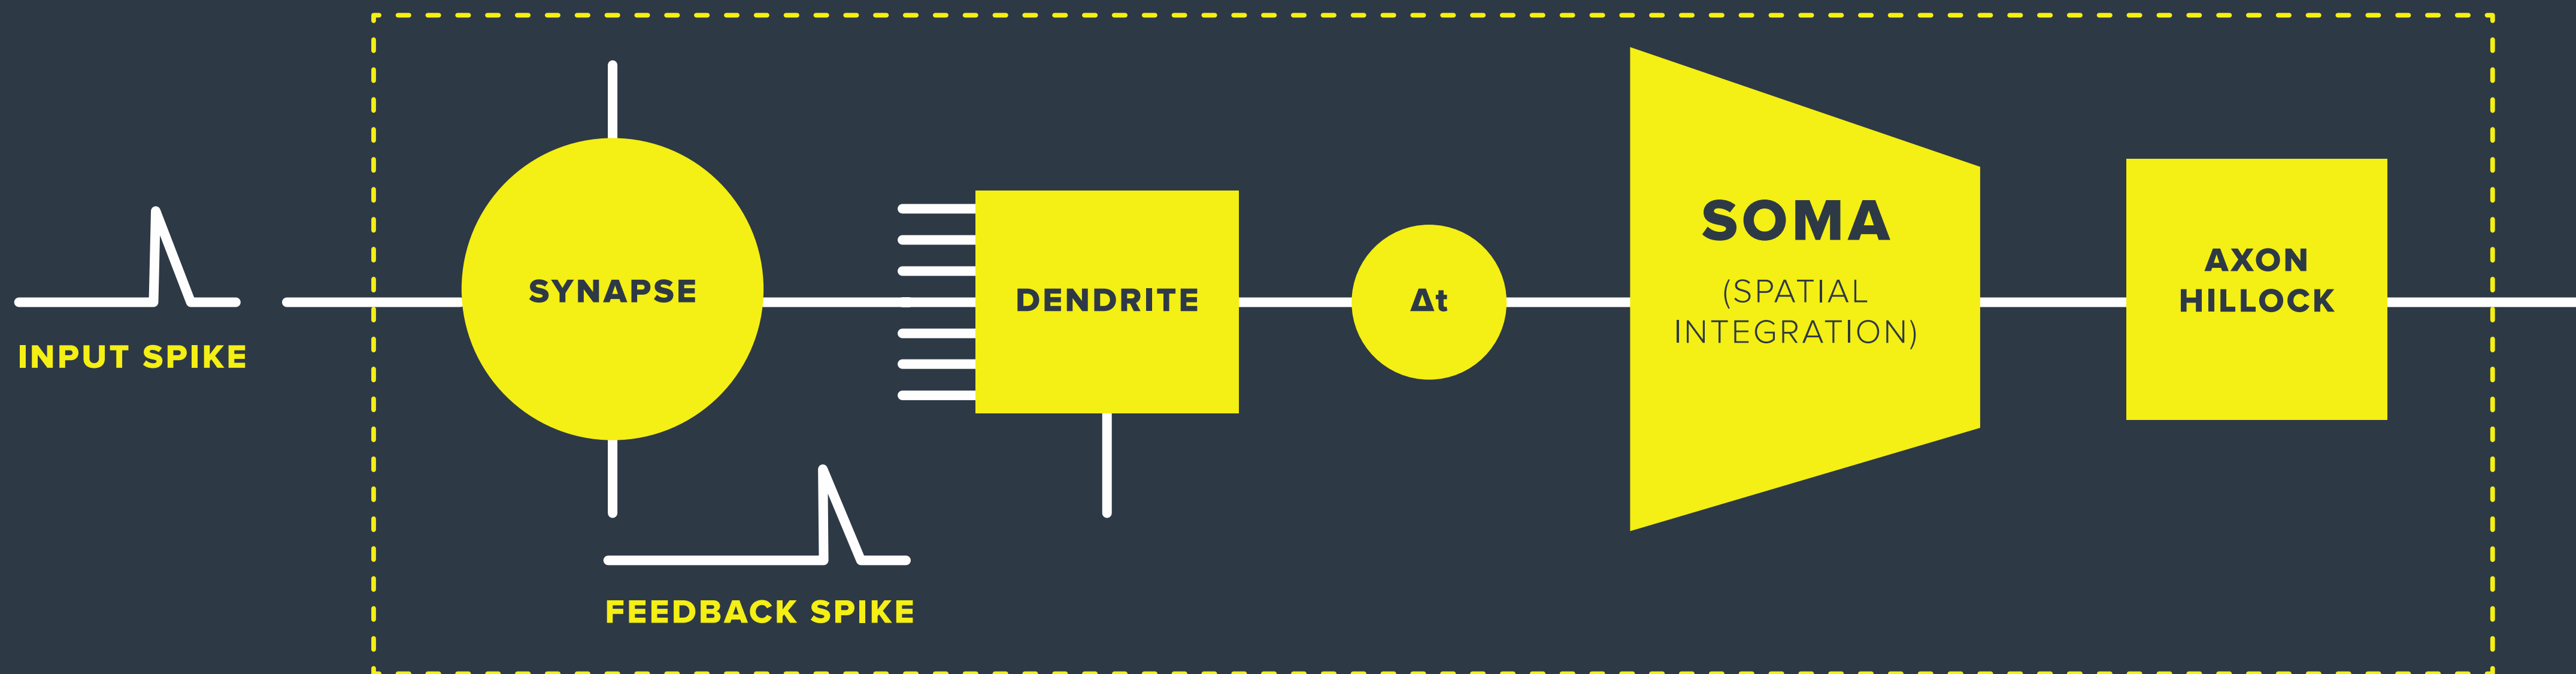

For personal use only

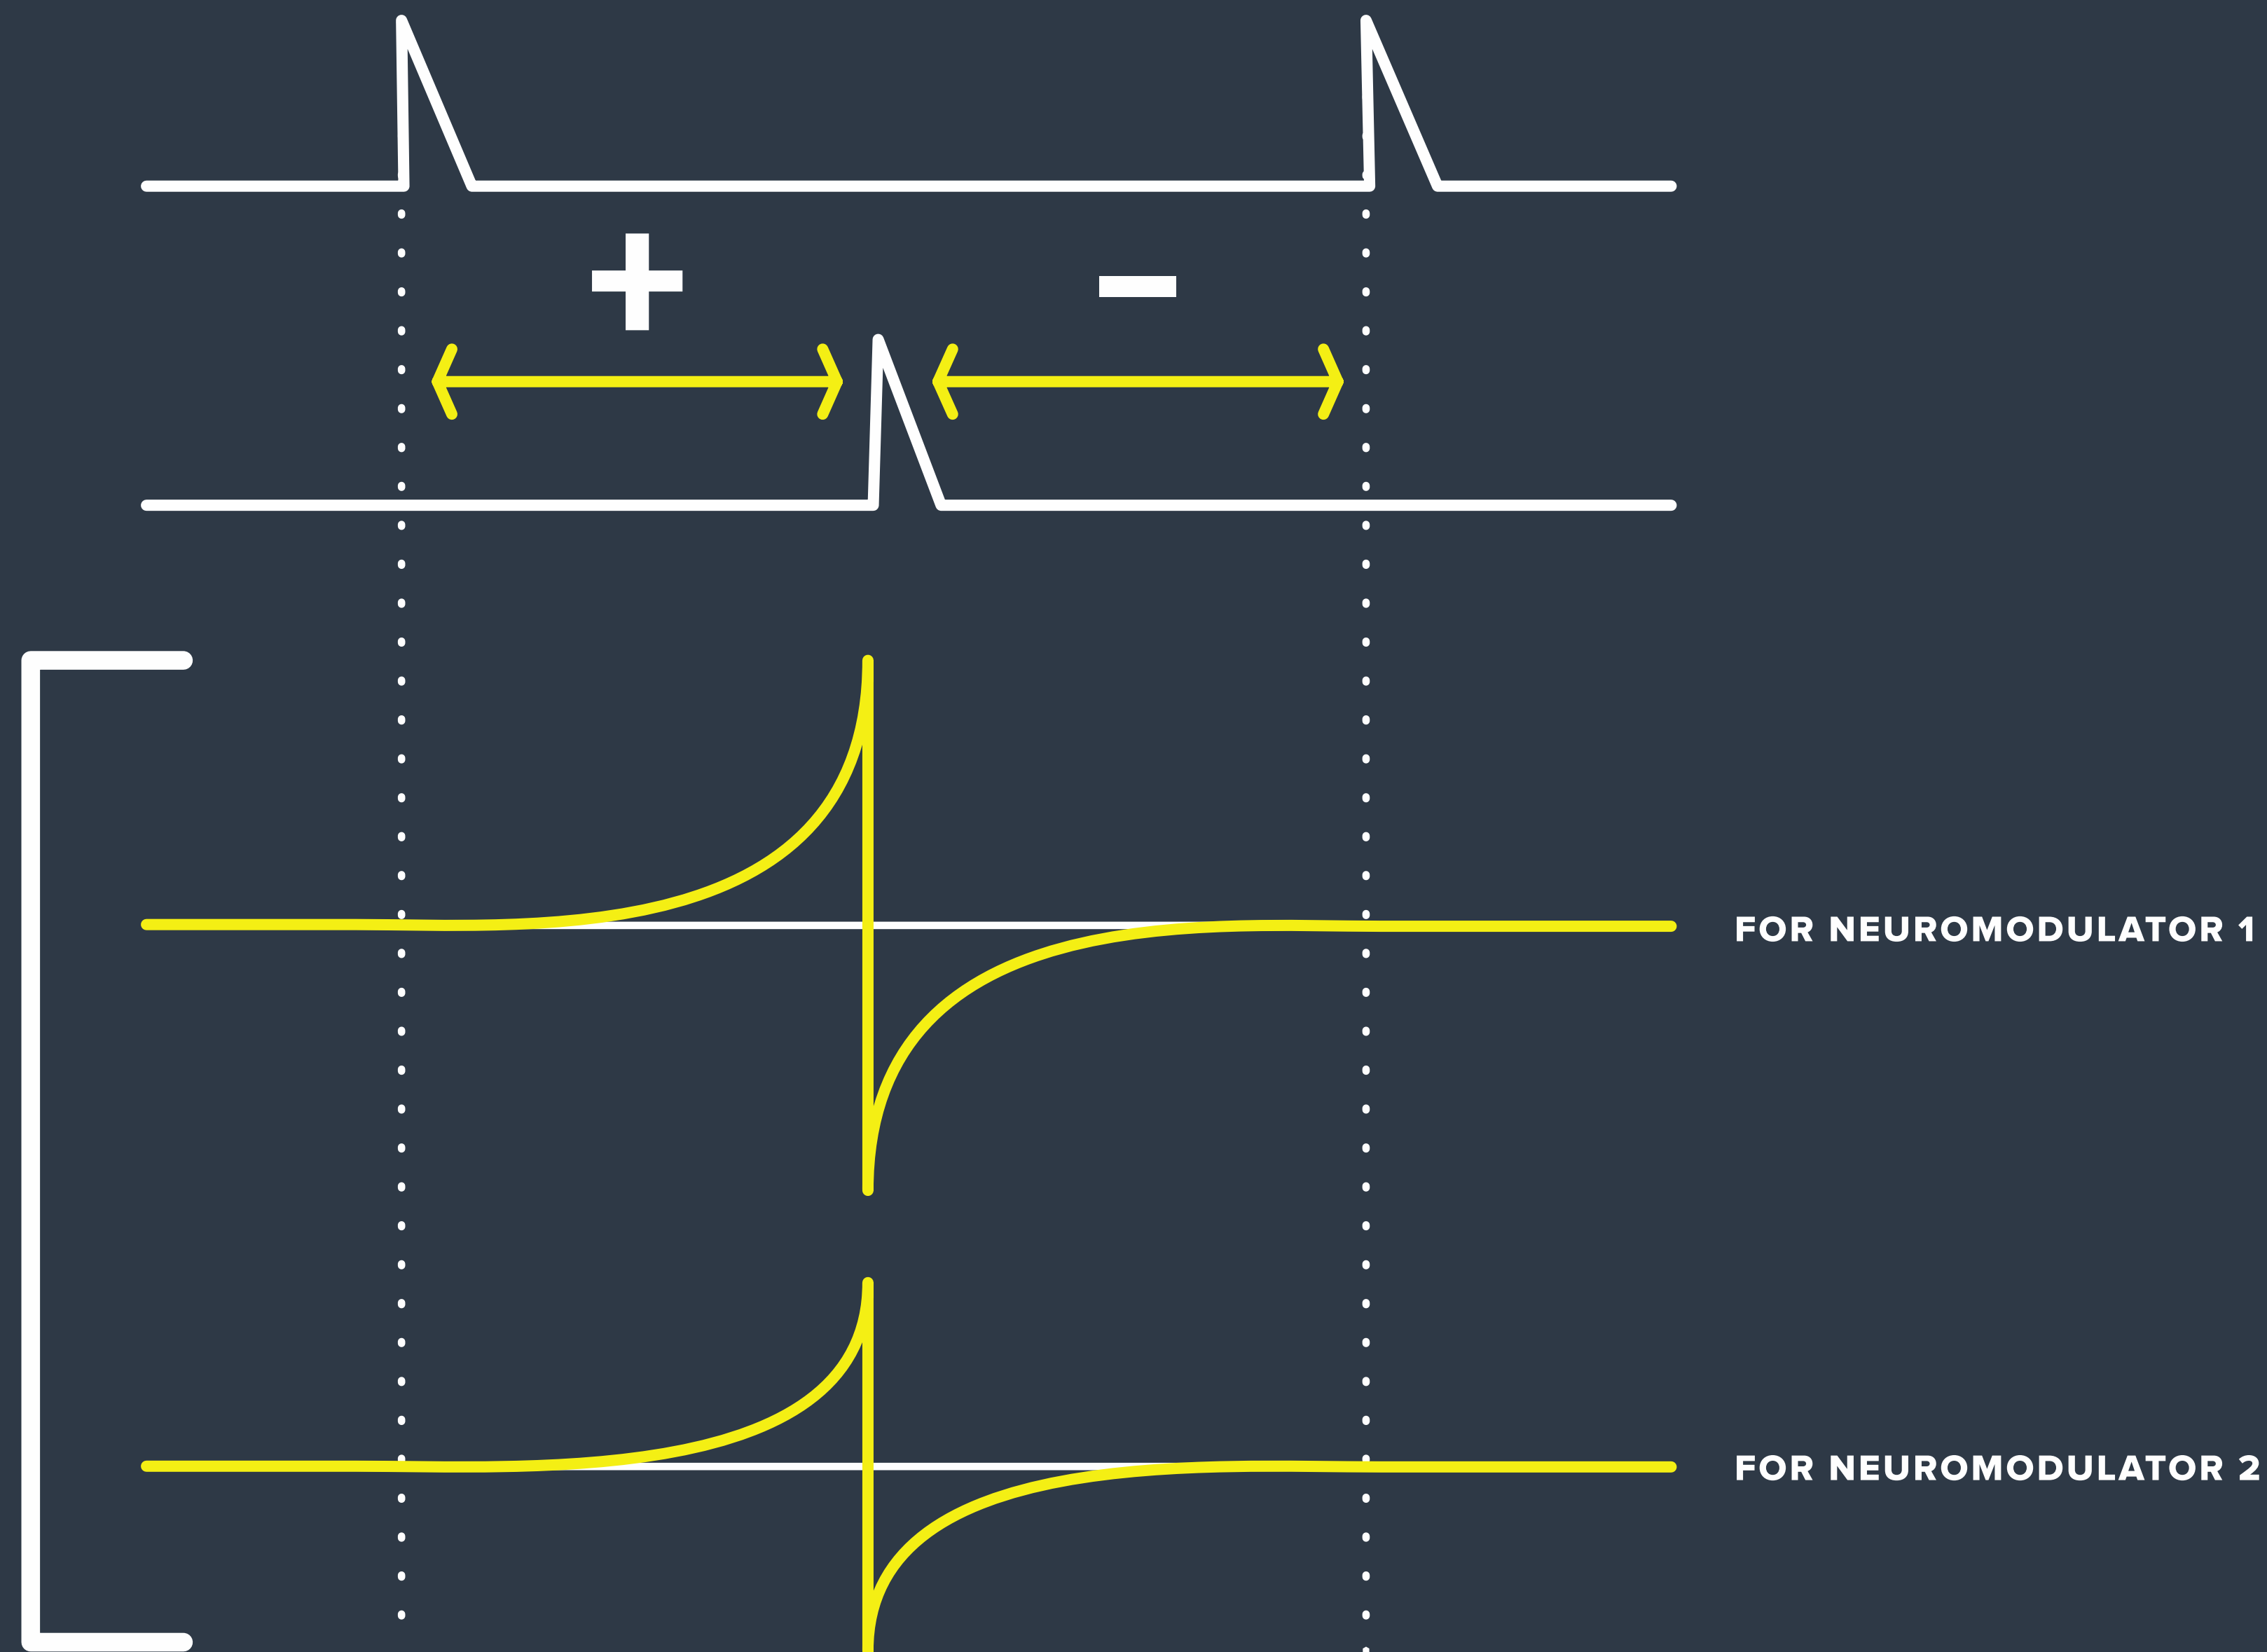

For personal use only

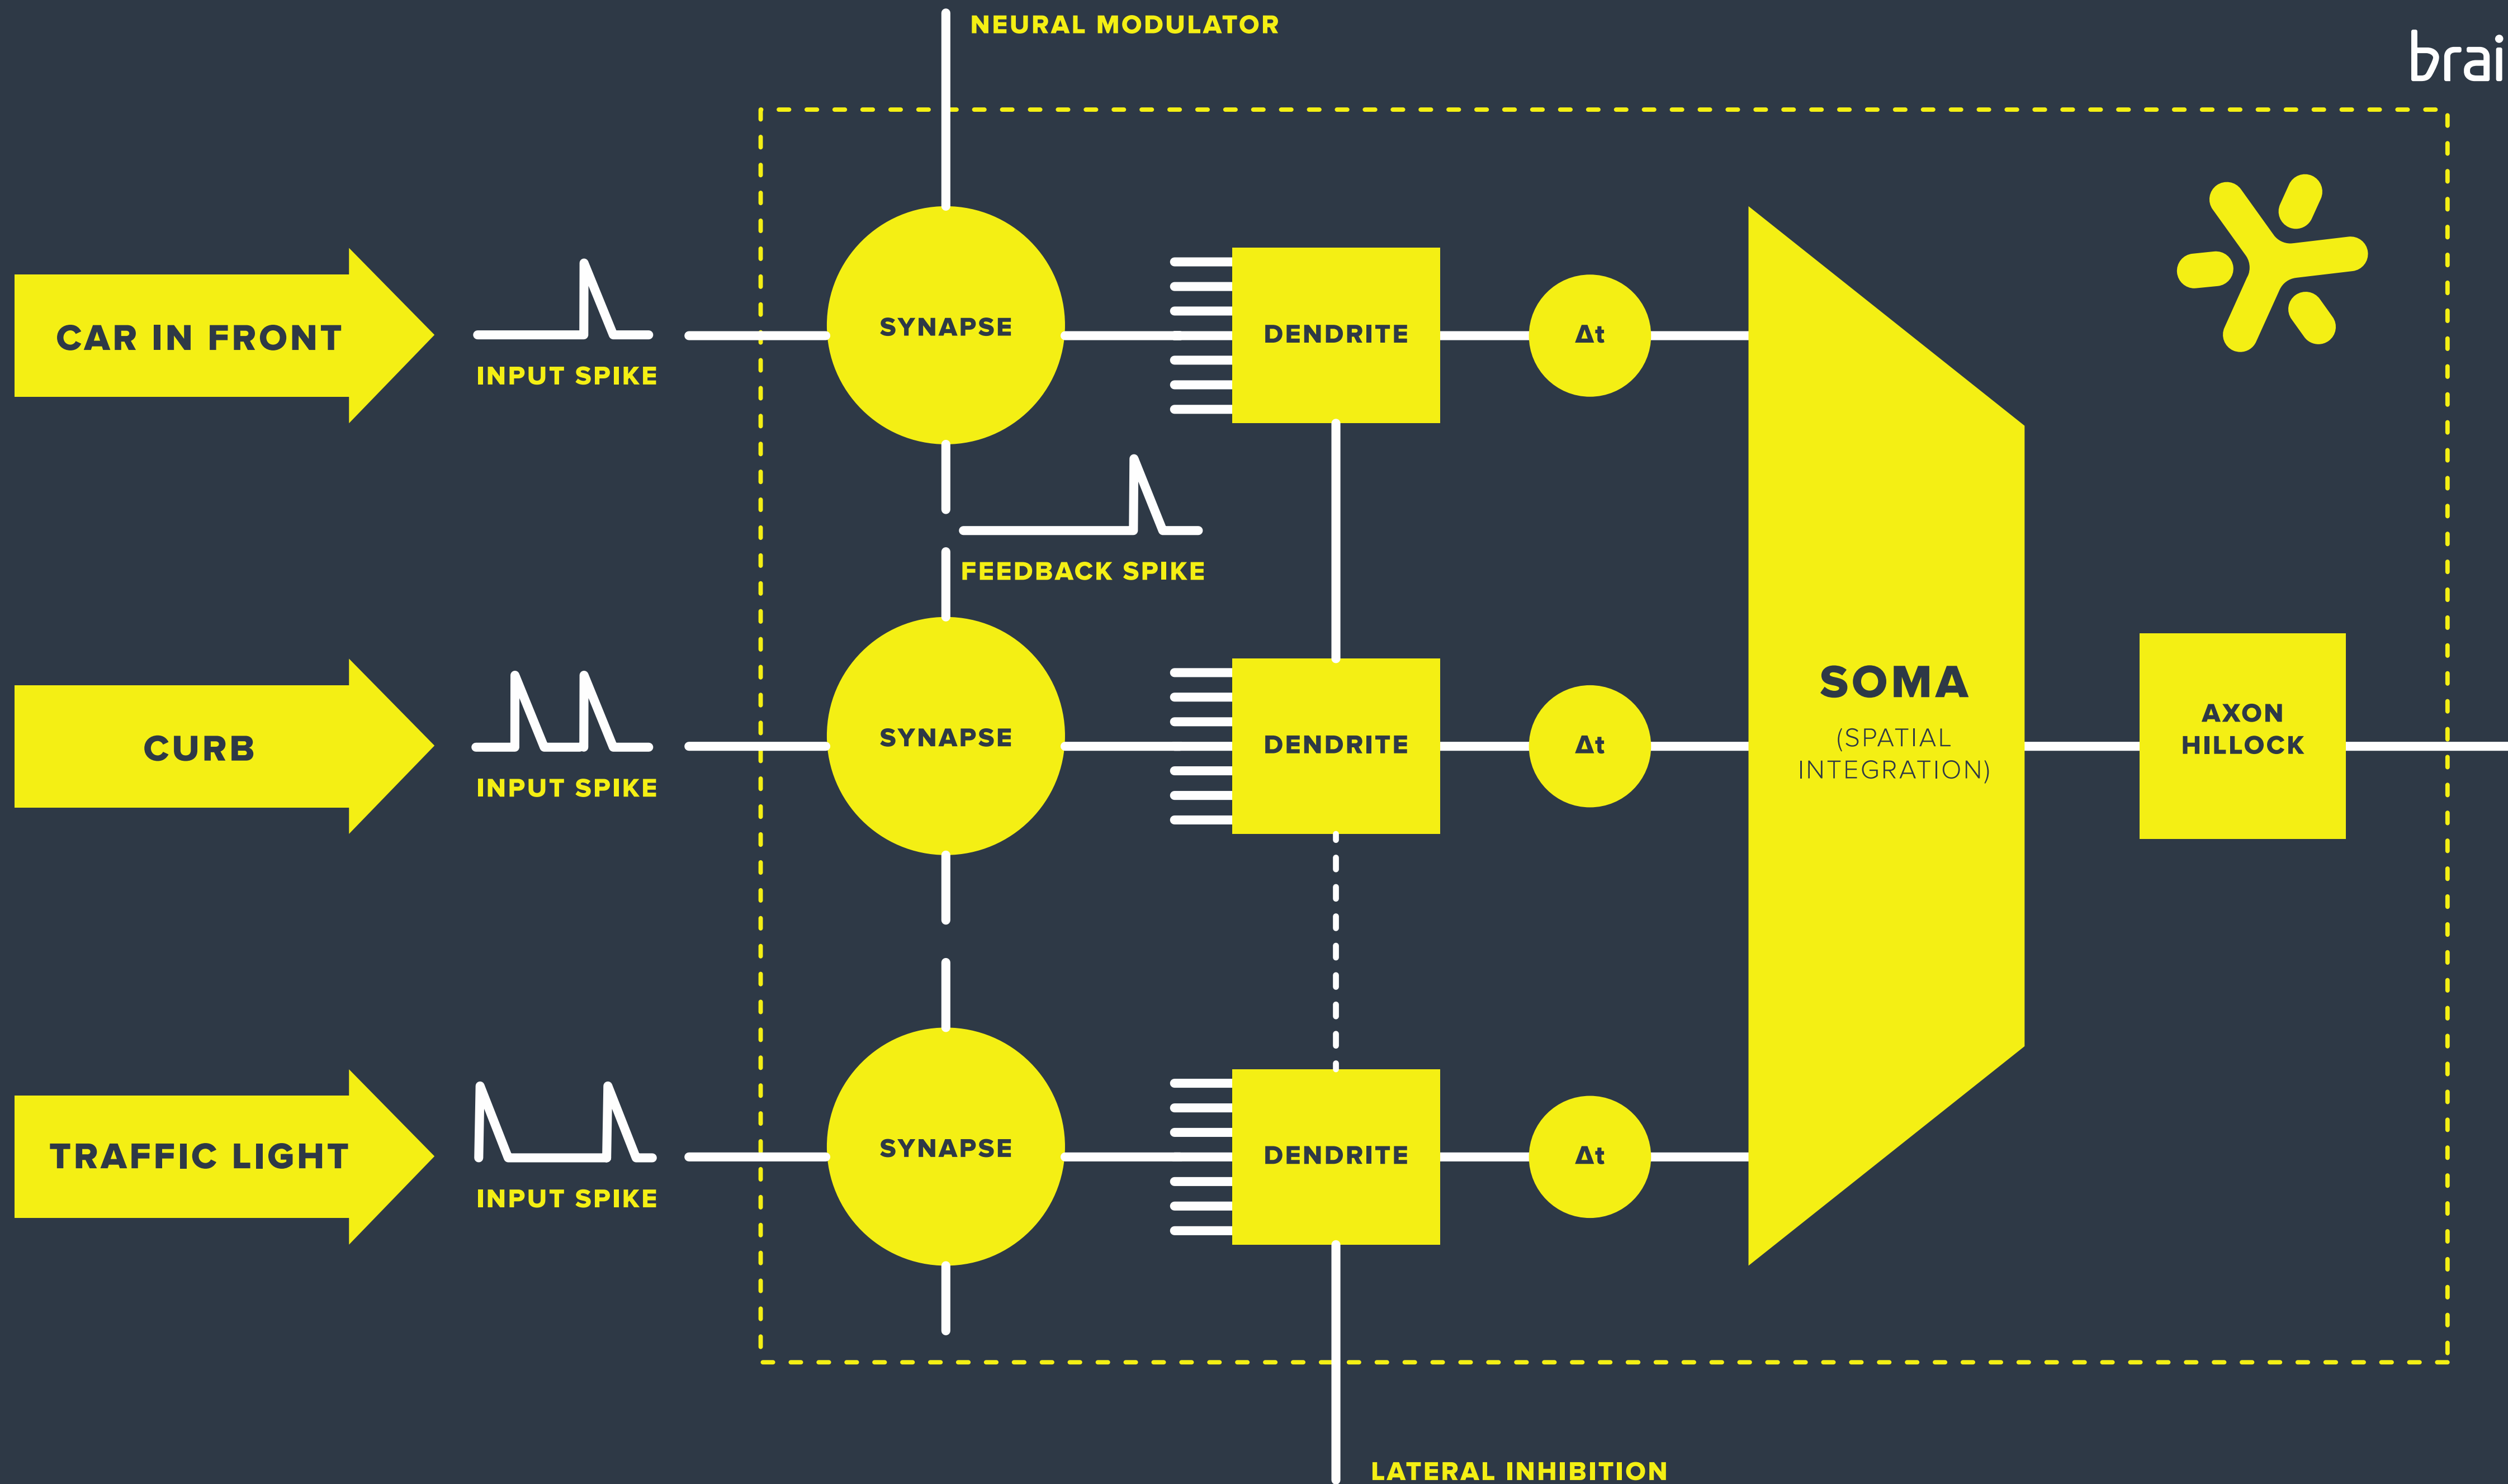

AUTONOMOUS LEARNING CURVE

*THIS IS WHAT CHARACTERISES
THE PROCESS OF LEARNING:*

SPIKE TIMING DEPENDANT PLASTICITY (STDP)

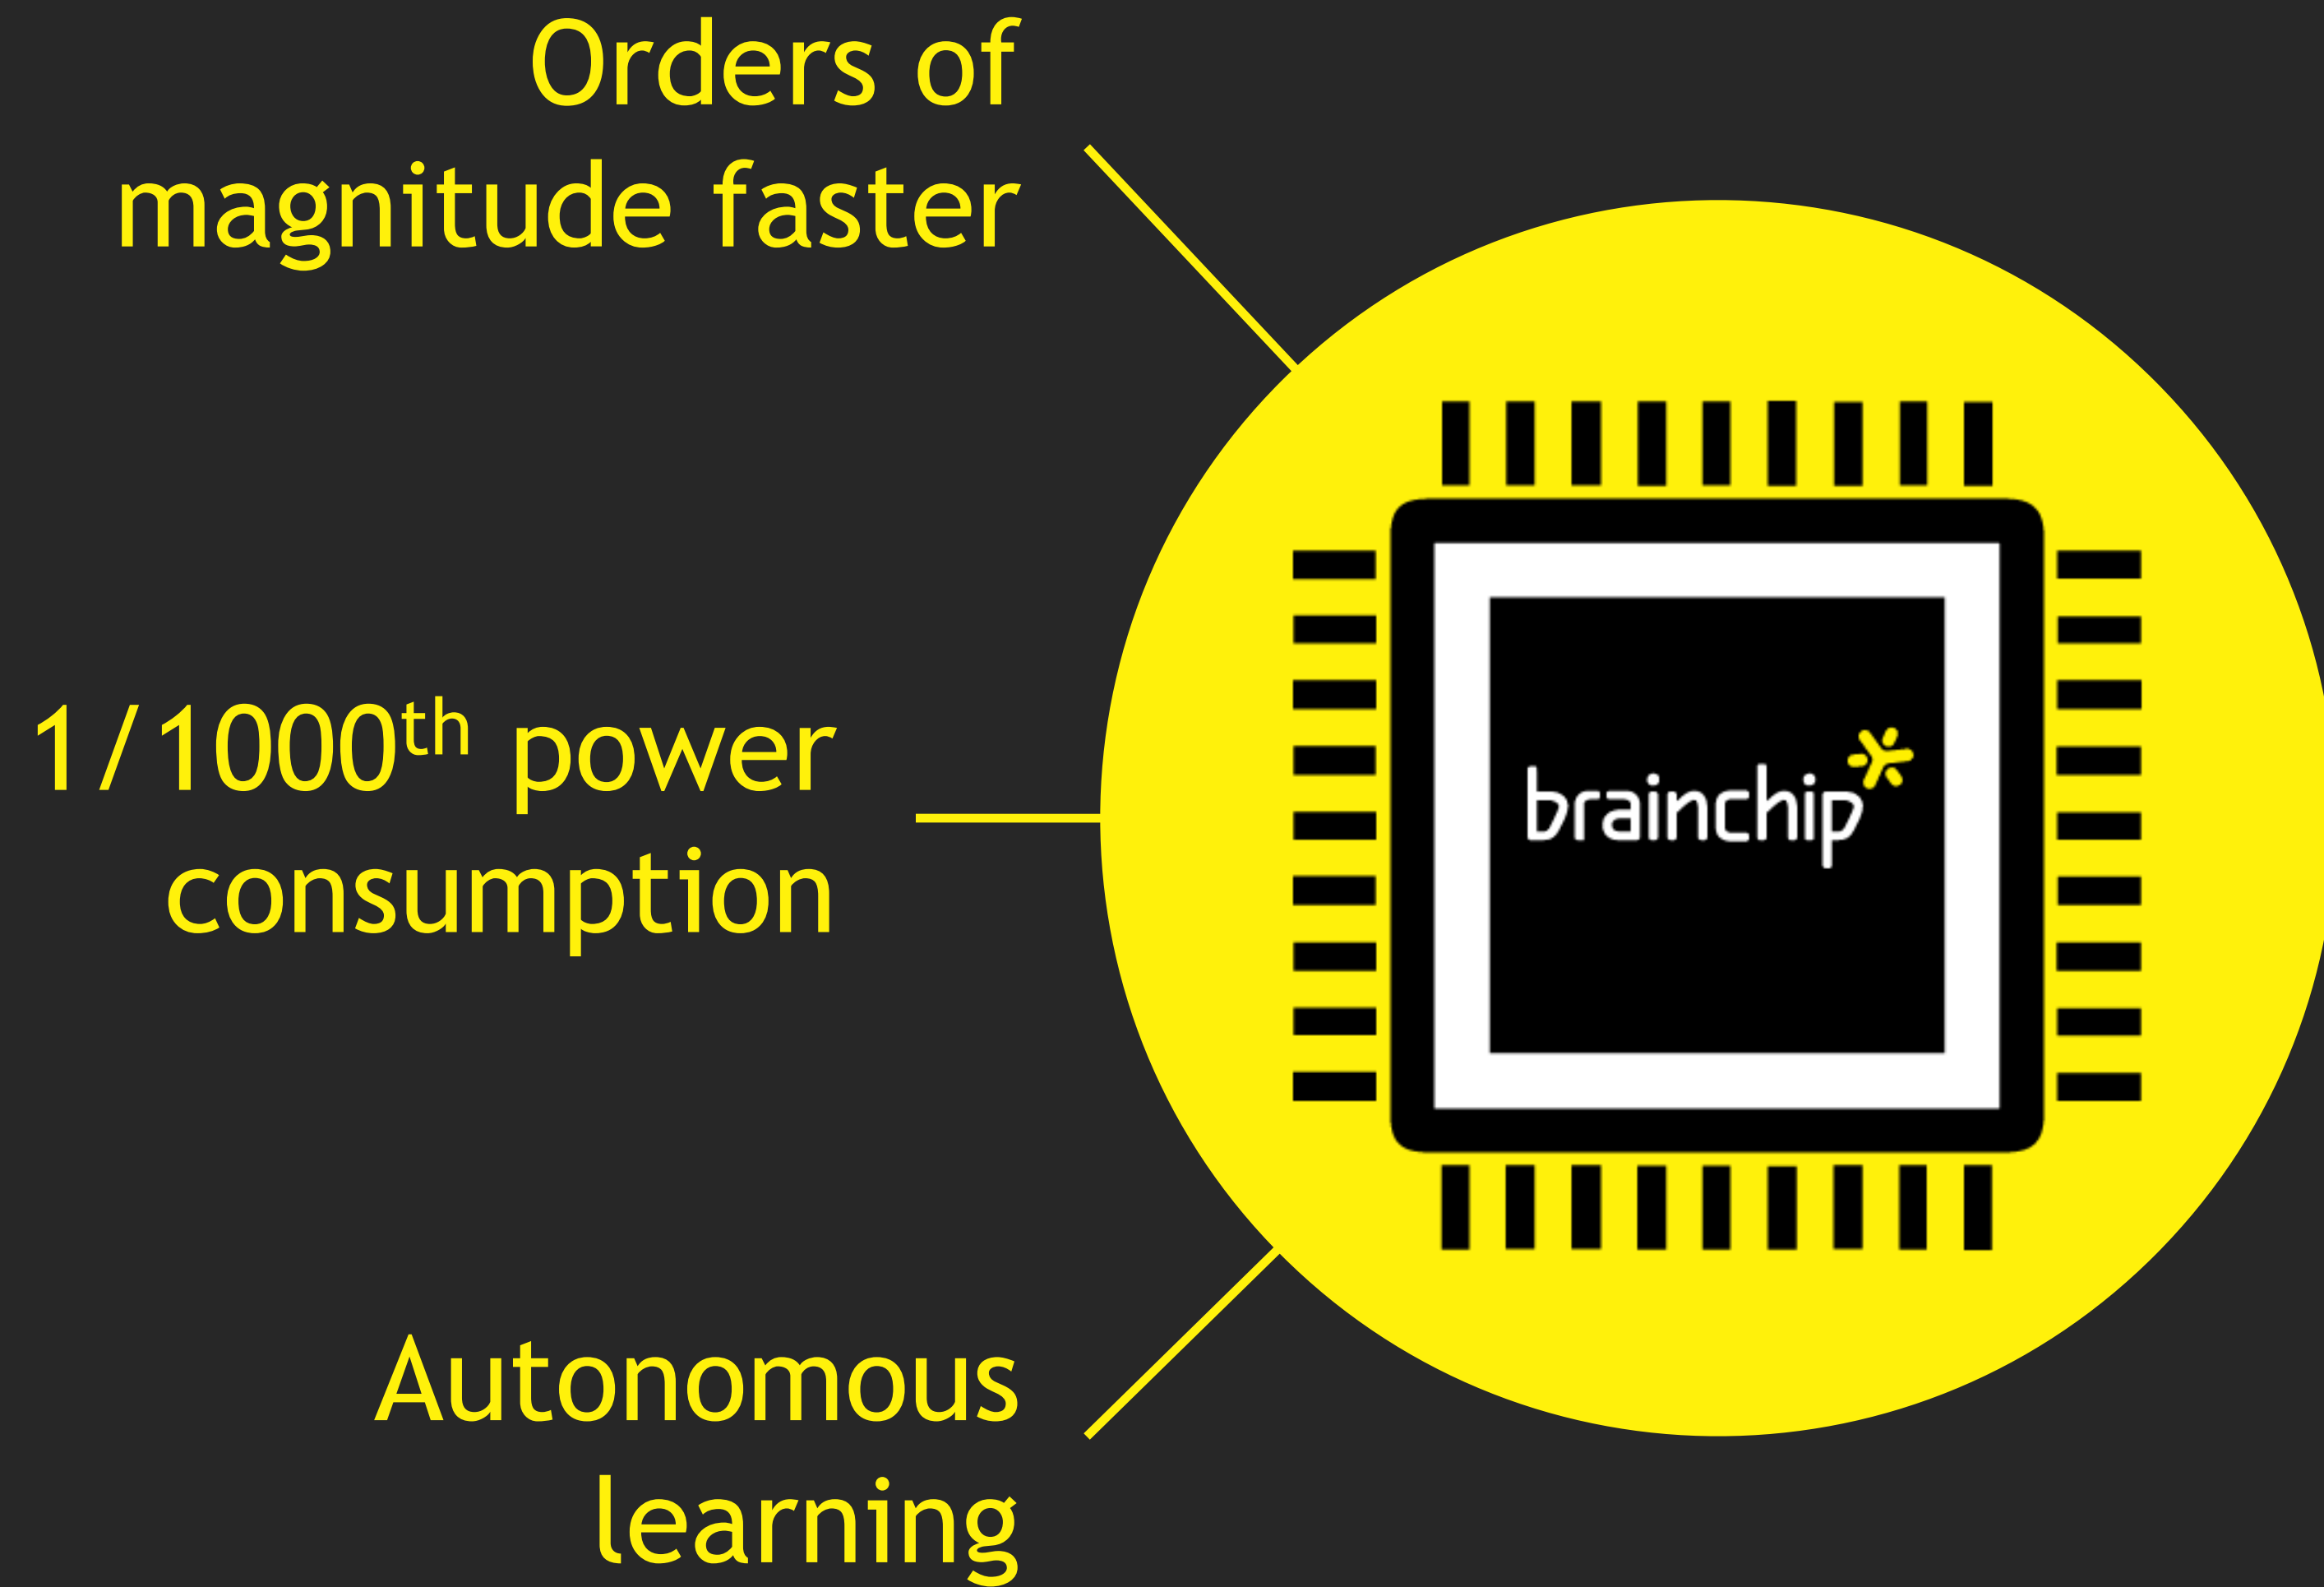

Orders of
magnitude faster

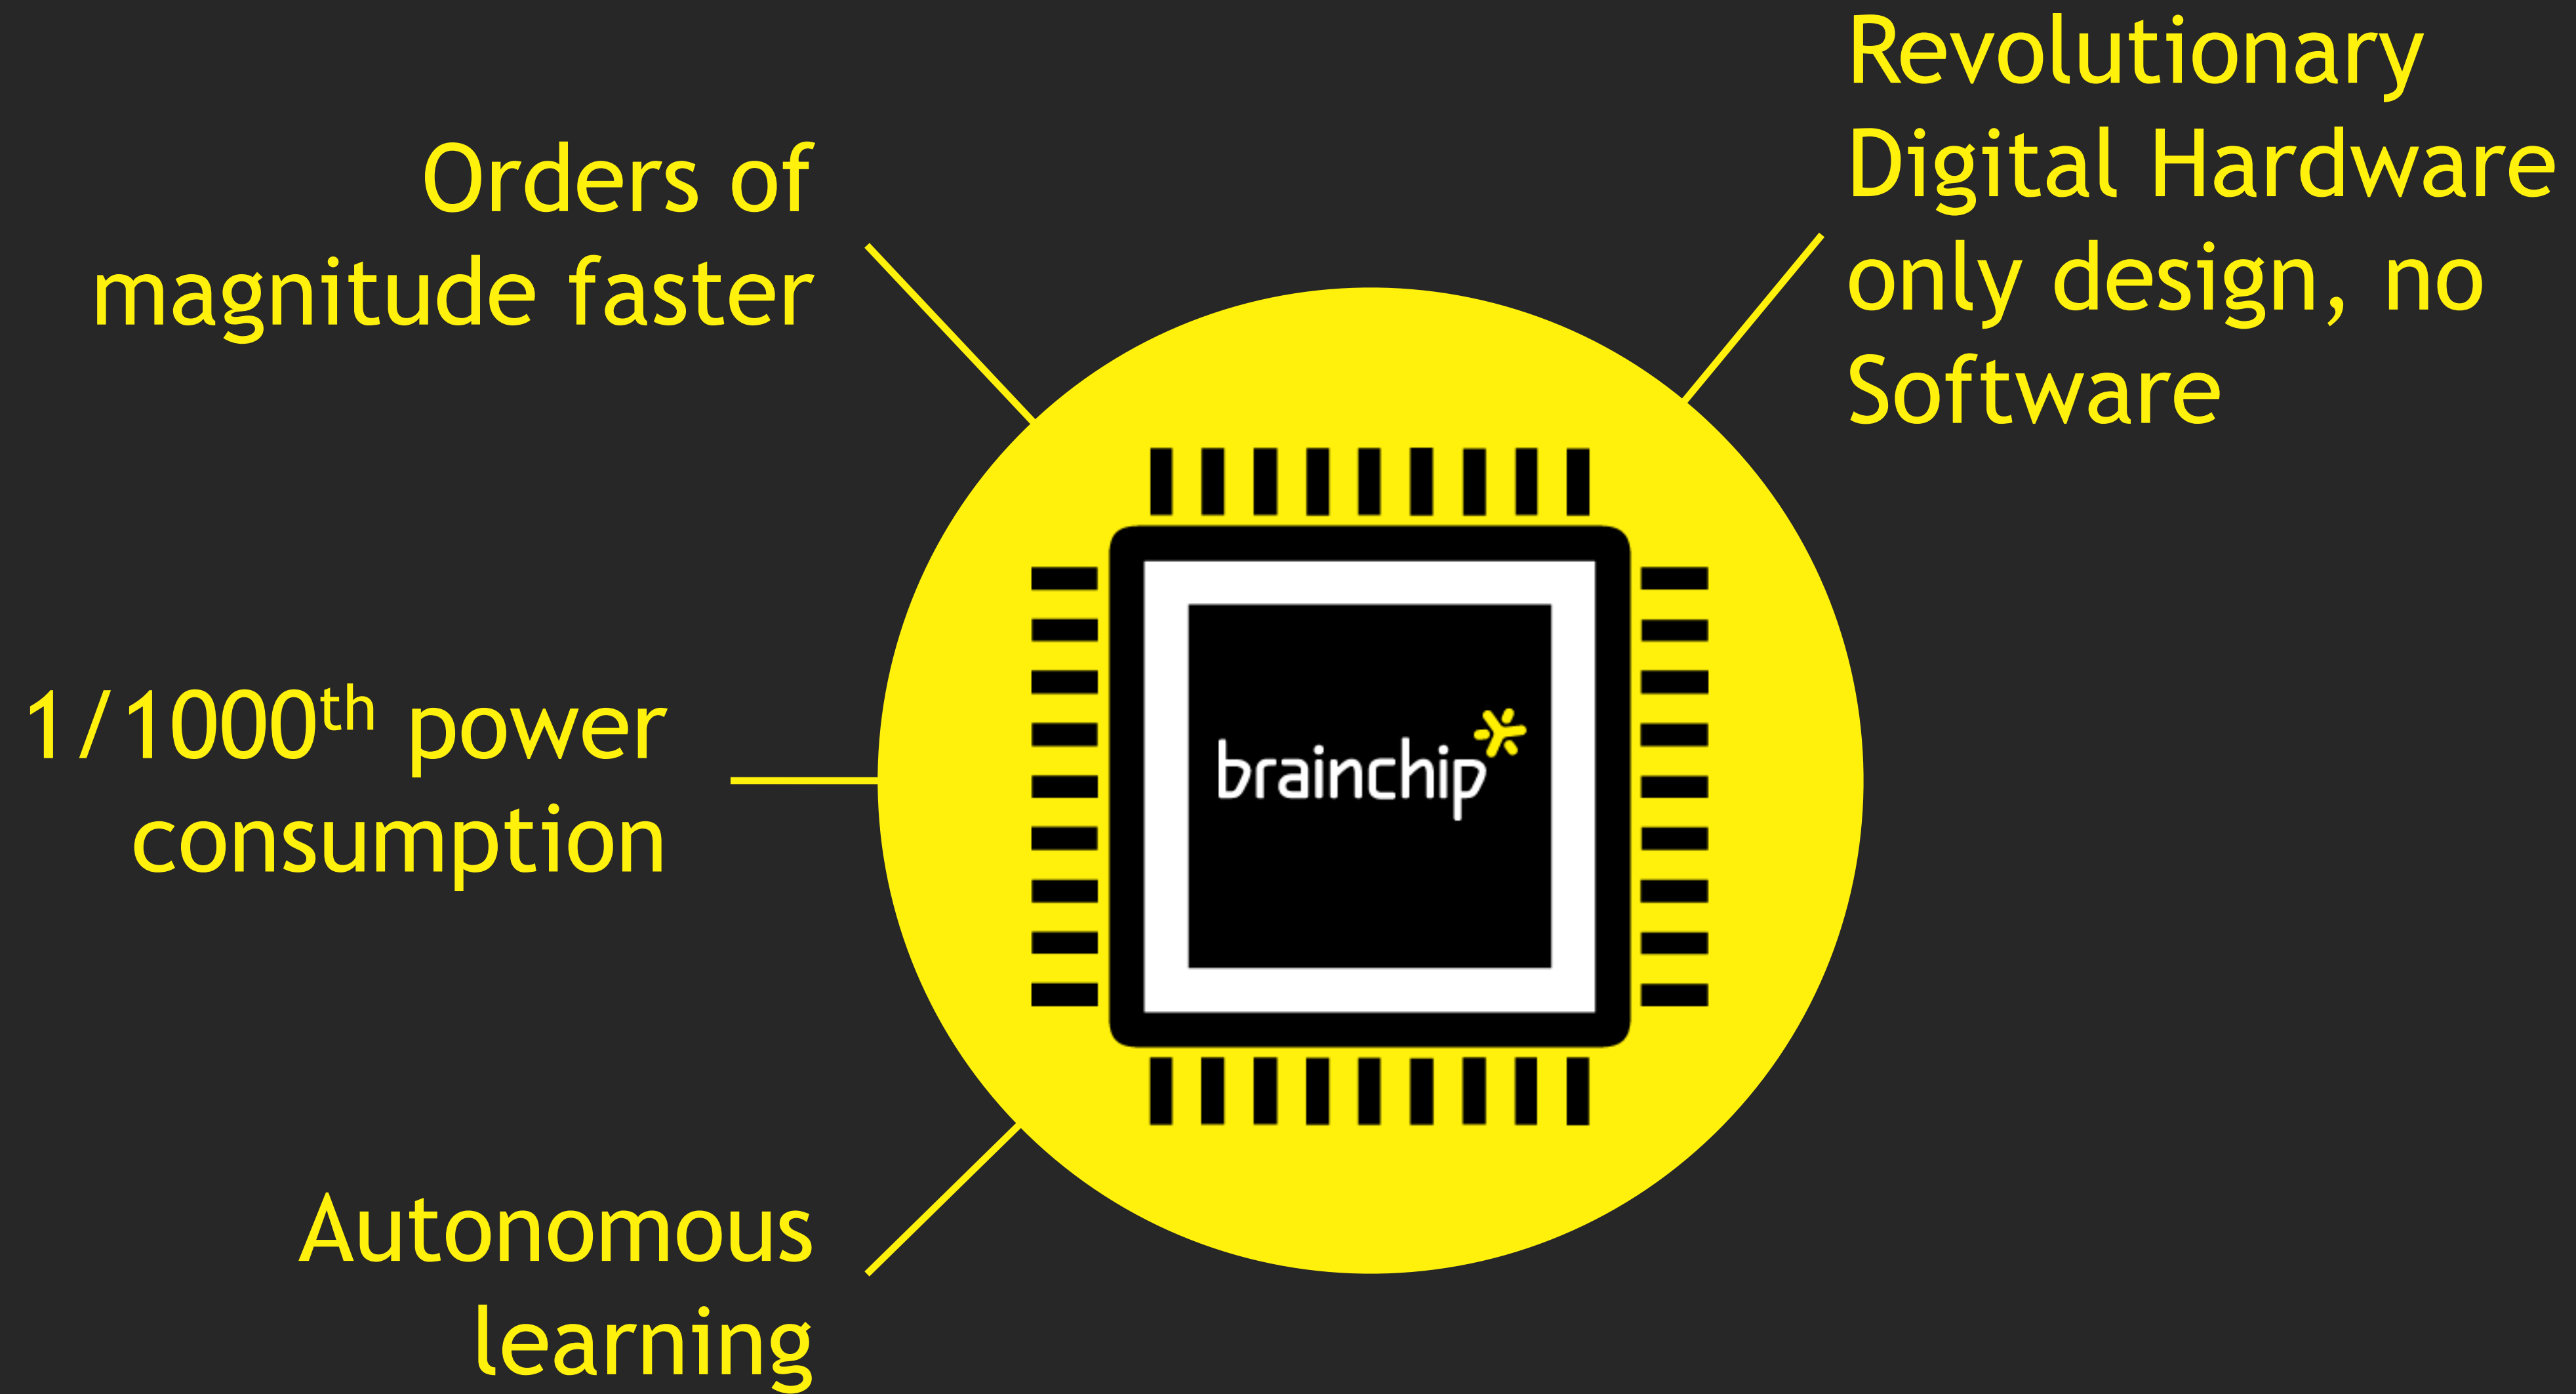

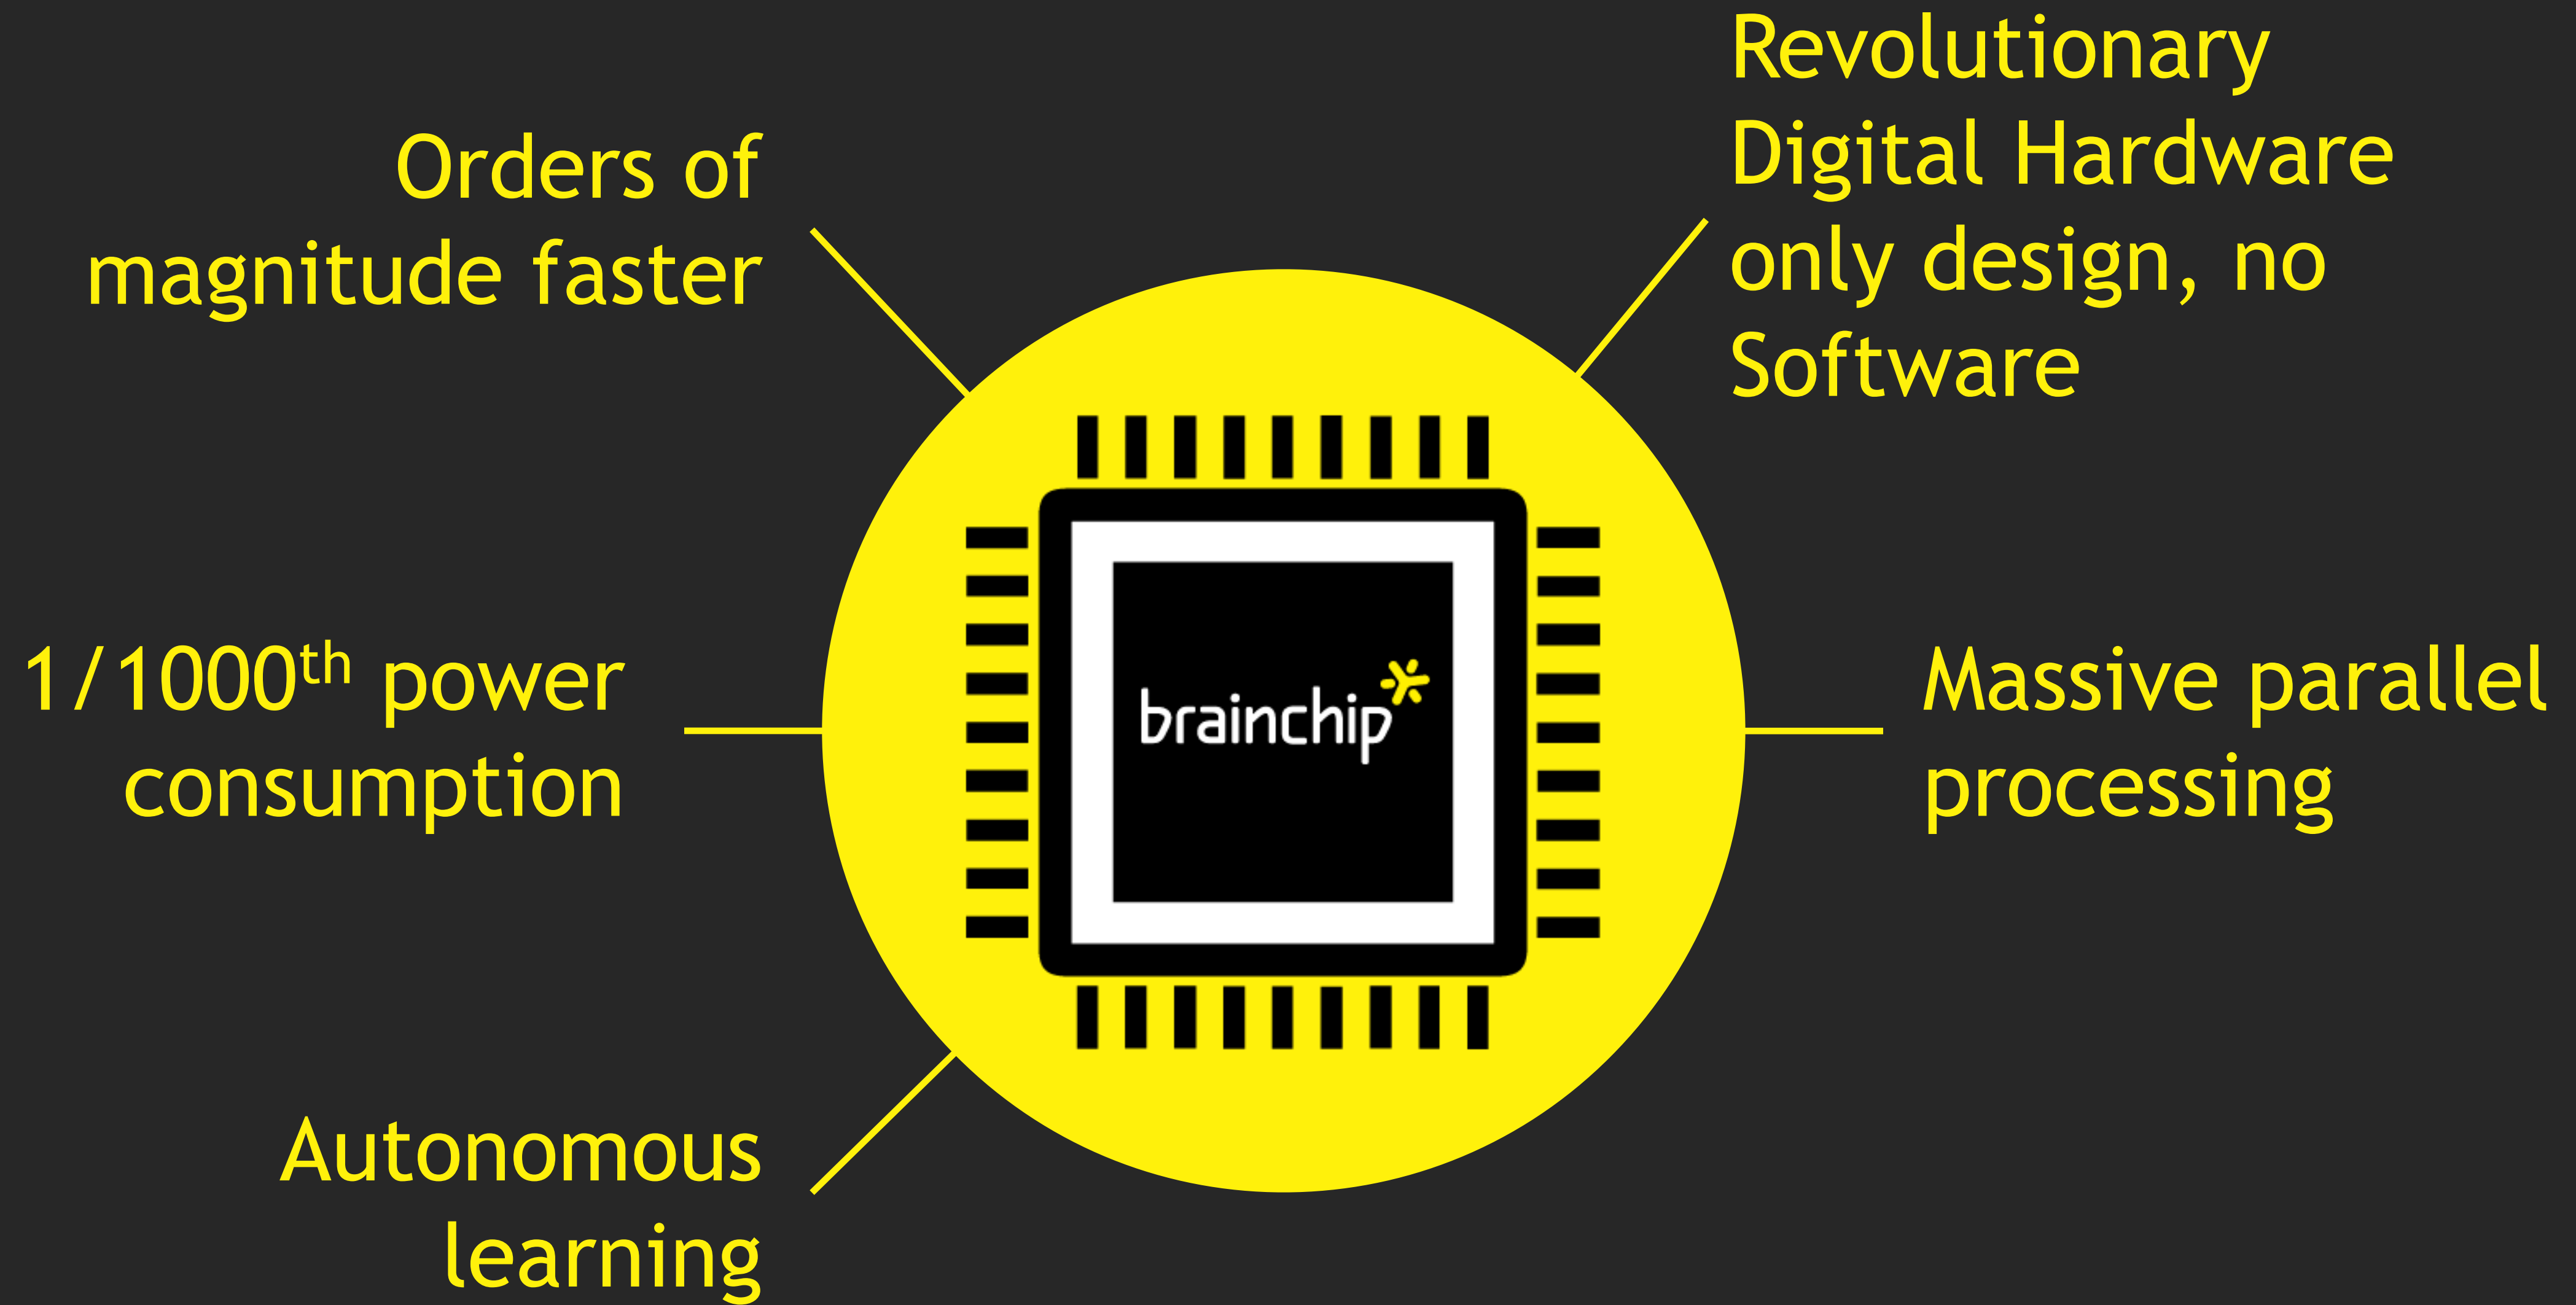

Orders of
magnitude faster

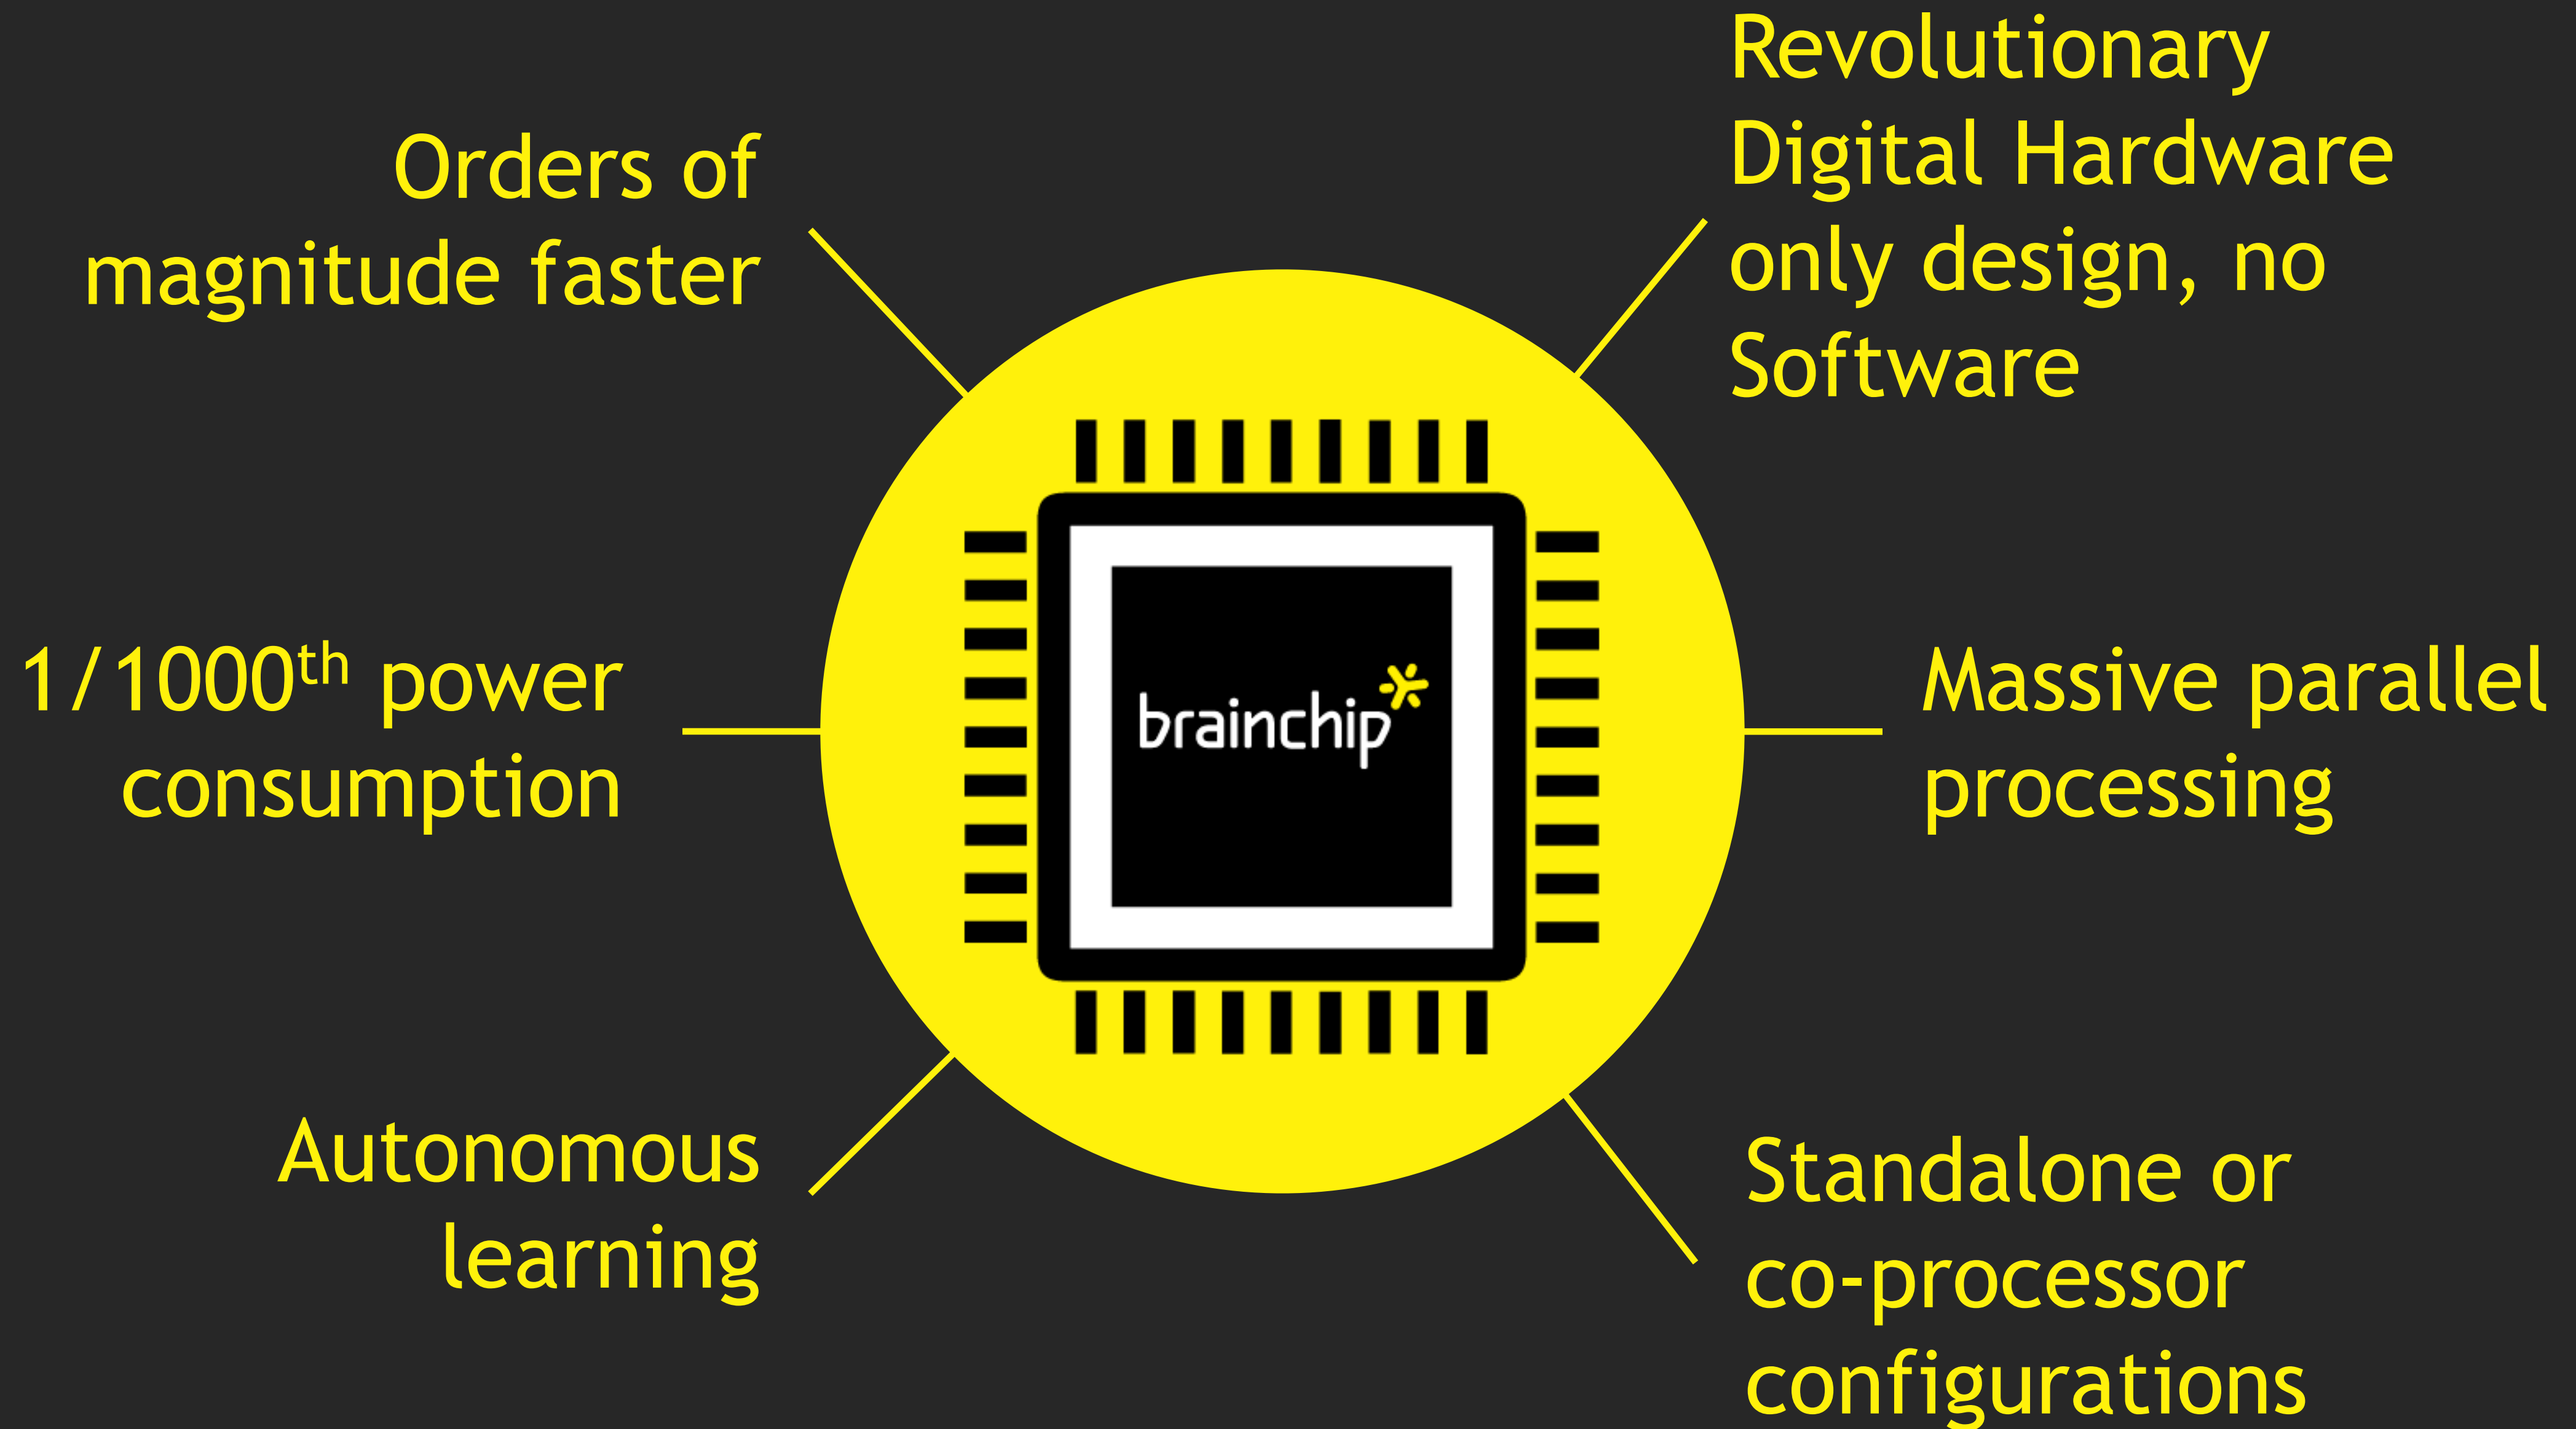

1 / 1000th power
consumption

**SNAP is true Artificial
Intelligence that can learn
and operate at speeds
close to the human brain.**

How SNAP compares to current AI.

SNAP

- Extremely low latency
- Learns from a wide variety of inputs
- A small network of microchips
- Processes and stores information onboard

**One SNAP neuron is
the equivalent to
4997 Sigmoid
(Software) neurons.**

Wolfgang Maass, University of Graz.

**Our smarts are our
biggest asset.**

BrainChip is an IP licensing business,
so our business model will focus
around licensing, engineering fees
and royalty streams.

Our market opportunities.

As well as our current discussions with potential technology partners, and series of products in the pipeline, we have identified two key areas of focus. Smartphones and the Internet of Things (IoT).

What Wikipedia Says about the Internet of things.

“

The network of physical objects or "things" embedded with electronics, software, sensors, and network connectivity, which enables these objects to collect and exchange data.”

What Dave Evans (Cisco) Says about the Internet of things;

“

Experts estimate that the IoT will consist
of almost 50 billion objects by 2020.”

SNAP and the Internet of Things.

SNAP and the Internet of Things.

SNAP technology can be embedded in IoT devices paired with various different sensors, like temperature, gas emissions, traffic cameras, CCTV and more.

SNAP and the Internet of Things.

SNAP technology can be embedded in IoT devices paired with various different sensors, like temperature, gas emissions, traffic cameras, CCTV and more.

The IoT sector is forecast to be a multi billion dollar market segment.

SNAP's future milestones.

SNAP' s future milestones.

Milestone 2

BrainChip Spiking Neural Network

SNAP implemented in Hardware

Demonstrates the advanced nature of the SNAP technology

Enables scalability

✓ Delivery achieved ahead of schedule

SNAP' s future milestones.

Milestone 2

Beyond

BrainChip Development Kit (BDK)

BrainChip Experimenters Kit (BEK)

SNAP 64 Chip

SNN Accelerator System

A significant product pipeline to enable large scale deployment of SNAP

Delivery: Over the next 24 months

**We plan to build a broad
portfolio of global patents.**

We have 1 granted patent and five
patents pending.

**We plan to build a broad
portfolio of global patents.**

Brainchip has a large number of
patents in progress.

The brains behind Brainchip

Mick Bolto
Chairman

Legal and Corporate background.

Peter van der Made
Executive Director,
CTO and Interim CEO

SNAP inventor,
previous Chief
Scientist at IBM.

Adam Osseiran
Non executive
Director

Engineering
background with
extensive technical
business development
experience.

Anil Mankar
Chief Operating
Officer

An accomplished Senior
Engineer with full
product development
lifecycle experience.

Held senior positions
at Western Digital,
Connexant, MindSpeed
and Rockwell.

Neil Rinaldi
Non Executive
Director

Corporate background
with an emphasis on
M&A, capital raising &
business development
initiatives.

Scientific Advisory Board

The team behind the team

Dr. Nicholas Spitzer
Neuroscientist

Professor at
University of
California San Diego

Ph.D Harvard
University

Dr. Jeffrey Krichmar
Cognitive Scientist

Professor at
University of
California Irvine

Ph.D George Mason
University

Dr. Gert Cauwenberghs
Scientist

Professor University of
California San Diego

Ph.D California Insitute
of Technolgy, Pasadena

Capital Structure

Top twenty shareholders hold greater than 75.00%

54% of structure escrowed for between 1-2 years

Directors and management hold a significant stake.

Free float = 239,700,608

Security Type	Number of shares	Escrowed shares	Performance rights	Unlisted options
Unrestricted fully paid shares (free float)	239,700,608			
Restricted fully paid shares		431,174,644*		
Performance rights			120,000,000*	
Unlisted Options				6,250,000*

* Escrowed for between 12-24 months

Let's recap.

Let's recap.

We're a team of experienced innovators with a disruptive technology and a diverse revenue model.

Let's recap.

We're a team of experienced innovators with a disruptive technology and a diverse revenue model.

This is a global opportunity, we have significant product development plans, and we'd love to have you on board.

Pick our brains.
