

Company Announcement, December 23rd, 2015

Greenland Ratifies Participation in International Regulatory Conventions Concerning Uranium

- **Greenland parliament has ratified its participation in a series of international regulatory conventions**
- **The six conventions relate to safety and handling of radioactive materials**
- **Conventions identified through work programs by the Greenland and Danish government on the regulation of radioactive materials (uranium)**
- **Aimed to ensure Greenland operates in accordance with best international practice**
- **Represents an important regulatory development in relation to the management of radioactive materials**
- **Demonstrates the efforts and progress by the Greenland government to ensure Kvanefjeld can be developed in compliance with international safety conventions**
- **This important development comes as Kvanefjeld Project moves into permitting phase**

Greenland Minerals and Energy Limited ('GMEL' or 'the Company') is pleased to advise that the Greenland Government has ratified its accession to a series of international conventions that relate to safety and handling of radioactive materials.

The conventions had been identified through ongoing work by Greenland and Danish government departments over the last two to three years. These work programs aimed to identify and implement advances to Greenland's regulatory system, such that mining activities involving radioactive materials (uranium) can be conducted in accordance with best international practice.

Denmark has been a signatory to the conventions for a number of years; however, Greenland's offshore territory status under the Kingdom of Denmark required that it independently ratifies accession, which has now taken place.

The six conventions and explanatory terms went through a public hearing process in Greenland through the middle of 2015, prior to being tabled for parliament.

For personal use only

Work programs by the Greenland and Danish governments on regulatory matters concerning radioactive materials have taken place in parallel to establishing a development strategy for the Kvanefjeld rare earth – uranium project, and completing a mining (exploitation) license application. The mining license application has been lodged with the Greenland government for guidance, with application components distributed to the relevant government departments and Danish institutes.

The latest regulatory developments are significant, and a demonstration of the efforts and progress by the Greenland government to ensure Kvanefjeld can be developed in compliance with international safety conventions and best-practice.

The regulatory developments close out of productive year for GMEL. With a mining license application completed and handed over to the Greenland government, and important progress now made on regulations concerning uranium, the Company is well-positioned to transition into the permitting phase in 2016.

International Conventions Implemented by Greenland Government

- International Joint Convention on the Safety of Spent Fuel Management and on the Safety of Radioactive Waste Management.
- International Atomic Energy Agency (IAEA) Convention on Assistance in the Case of a Nuclear Accident or Radiological Emergency.
- Amendment to the IAEA Convention on the Physical Protection of the Nuclear Materials
- International Convention for the Suppression of Acts of Nuclear Terrorism.
- International Labour Organization (ILO) Convention No. 115; Radiation Protection Convention (Convention concerning the Protection of Workers against Ionising Radiations).
- The IAEA Convention on Nuclear Safety.

Background

The Kvanefjeld Project is inclusive of three defined mineral resources (Kvanefjeld, Sørensen, and Zone 3), with a combined global resource base of greater than 1 billion tonnes. It stands as one of the largest undeveloped resources of rare earth metals and uranium globally.

In 2015, a comprehensive feasibility study has been completed for the initial development strategy, and an ore reserve estimate established to sustain a 37 year mine-life. Environmental and social impact assessments have also be completed, which together with the feasibility study, constitute an exploitation (mining) license application.

The development strategy has been through a public pre-hearing phase, and the resulting white paper and terms-of-reference were approved by the Greenland government in 2015.

The Kvanefjeld project is designed to deliver a stable, low cost producer of critical rare earth products, uranium oxide, zinc concentrate and fluorspar. The polymetallic production profile, and unique non-refractory ore provide key advantages.

The process route has been rigorously developed, and both concentrator and refinery circuits have been successfully operated at pilot plant scale.

Collectively, these achievements have Kvanefjeld positioned as one of the most advanced rare earth and uranium projects globally.

¹There is greater coverage of assays for uranium than other elements owing to historic spectral assays. U₃O₈ has therefore been used to define the cutoff grades to maximise the confidence in the resource calculations.

²Total Rare Earth Oxide (TREO) refers to the rare earth elements in the lanthanide series plus yttrium.

Note: Figures quoted may not sum due to rounding.

ABOUT GREENLAND MINERALS AND ENERGY LTD.

Greenland Minerals and Energy Ltd (ASX: GGG) is an exploration and development company focused on developing high-quality mineral projects in Greenland. The Company's flagship project is the Kvanefjeld multi-element deposit (rare earth elements, uranium, zinc), that stands to be the world's premier specialty metals project. A pre-feasibility study was finalised in 2012, and a comprehensive feasibility study was completed in May, 2015. The studies demonstrate the potential for a large-scale, long-life, cost-competitive, multi-element mining operation. Through 2015, GMEL is focussed on completing a mining license application in order to commence project permitting, in parallel to advancing commercial discussions with development partners. For further information on Greenland Minerals and Energy visit <http://www.ggg.gl> or contact:

Greenland Minerals and Energy Ltd will continue to advance the Kvanefjeld project in a manner that is in accord with both Greenlandic Government and local community expectations, and looks forward to being part of continued stakeholder discussions on the social and economic benefits associated with the development of the Kvanefjeld Project.

Competent Person Statement – Mineral Resources and Ore Reserves

The information in this report that relates to Mineral Resources is based on information compiled by Mr Robin Simpson, a Competent Person who is a Member of the Australian Institute of Geoscientists. Mr Simpson is employed by SRK Consulting (UK) Ltd ("SRK"), and was engaged by Greenland Minerals and Energy Ltd on the basis of SRK's normal professional daily rates. SRK has no beneficial interest in the outcome of the technical assessment being capable of affecting its independence. Mr Simpson has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Robin Simpson consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The information in the statement that relates to the Ore Reserves Estimate is based on work completed or accepted by Mr Damien Krebs of Greenland Minerals and Energy Ltd and Mr Scott McEwing of SRK Consulting (Australasia) Pty Ltd.

Damien Krebs is a Member of The Australasian Institute of Mining and Metallurgy and has sufficient experience that is relevant to the type of metallurgy and scale of project under consideration, and to the activity he is undertaking, to qualify as Competent Persons in terms of The Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC Code, 2012 edition). The Competent Persons consent to the inclusion of such information in this report in the form and context in which it appears.

Scott McEwing is a Fellow and Chartered Professional of The Australasian Institute of Mining and Metallurgy and has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration, and to the activity he is undertaking, to qualify as Competent Persons in terms of The Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC Code, 2012 edition). The Competent Persons consent to the inclusion of such information in this report in the form and context in which it appears.

The mineral resource estimate for the Kvanefjeld Project was updated and released in a Company Announcement on February 12th, 2015. The ore reserve estimate was released in a Company Announcement on June 3rd, 2015. There have been no material changes to the resource estimate, or ore reserve since the release of these announcements.
