ASX ANNOUNCEMENT

FDA Approves New Range of Respiratory Devices

Medical Developments International Limited (ASX: MVP) is delighted to announce that it has received approval from the US Food and Drug Administration (FDA) to sell its new range of anti-static respiratory devices in the USA.

The approval represents a significant opportunity to build MDI's global respiratory business, particularly in the USA. This approval was anticipated and recent marketing efforts means the approval complements a number of Distribution Agreements entered into with North American business partners over the last month. As a consequence, MVP expects to achieve new sales in the near term.

MVP CEO Mr. John Sharman said: "The recent approval of our North American range of anti-static respiratory devices represents a significant sales opportunity for us in North America and complements our range of global opportunities including the recent acquisition of Breath-A-Tech in Australia."

Mr. Sharman said, "Our global Respiratory Device business is showing great promise. We have received our first sales order from one of our new North American distributors which we expect to deliver in the next month. We expect to deliver good sales growth from our respiratory business in the months and years ahead."
