ASX Market Announcements

**ZYBER TO COMMENCE TRADING ON ASX**

**Highlights**

- Zyber shares commence trading today on the ASX under the code "ZYB"
- Strong cash position following successful completion of its \$3 million capital raise
- Proceeds will be used to complete proof-of-concept (POC) trials with five large enterprise customers and complete development work on full suite of Zyber products
- Strong market traction continues to build with one developer agreement signed and another value-added reseller agreement in the pipeline
- File sharing security market opportunity is significant with Gartner predicting security spending to hit US\$86 billion this year
- Multiple corporate transactions under consideration

**Zyber Holdings Limited** (ASX: ZYB) ('Zyber' or the 'Company') is pleased to announce that its shares will commence trading on the Australian Securities Exchange today under the code "ZYB". This follows the successful acquisition of Zyber Secure Mobile Solutions Inc by Dourado Resources Limited (which has now been renamed Zyber Holdings Limited).

Zyber is in a strong financial position following its successful \$3 million capital raising and is well placed to bring its unique cyber security software suite to market.

The software solution, which gives enterprise customers the ability to track and securely share files, is planned for trial by four large Canadian companies with annual revenue in excess of C\$100 million each, and a government organisation.

The Company has secured a development partnership with one of Australia's leading consultancies, Redcore Pty Ltd, and is also in advanced negotiations to sign a value-added reseller (VARs) agreement with one of Canada's leading enterprise systems integrators.

"Zyber is at an inflection point as we have a number of exciting milestones in the months ahead. Not only do we anticipate a successful conclusion for the key client trials and validation of our secure file sharing technology to address the issue of *Shadow IT*, but we also anticipate the launch of our virtualisation module that will provide an additional layer of security to shared files," said Zyber's chief executive Clay Epstein.

"As the data is never stored on the client device, companies using the Zyber solution can be confident that their sensitive data will never be compromised."

---

*Shadow IT* is a term used to refer to software and services employed within an organisation without the explicit knowledge and approval from the IT department. Examples include the use of Dropbox and Google Drive.

Over the past few years, there has been a significant increase in the number of users circumventing enterprise policy and security by storing confidential data on relatively non-secure cloud-based file-sharing services.

Zyber's solution, which has taken the Company in excess of two years and a significant capital investment to develop, is uniquely suited to resolve this issue and the potential demand for Zyber is growing rapidly with Gartner reporting that the fastest growing segment within IT security over the past few years is "data loss prevention".

In addition to the Zyber product development, we are also looking at a number of acquisition opportunities and we expect to move quickly with one or more of those transactions in the coming weeks.
