

QUARTERLY REPORT

For the 3 months ended 31 March 2016

HIGHLIGHTS

- Corporate reset is nearing completion
- New board and management – appointment of new independent chair imminent
- Reprioritised work programs on resource extension and greenfield exploration targets
- Highly reputable geological advisory group appointed
- Substantive cost cutting achieved with further reduction in overhead costs underway
- Re-capitalisation in process to secure funding for value adding exploration programs
- Highly encouraging results from IGO exploration alliance

OVERVIEW

Mining Operations

- Mining and processing of ore completed at the Old Pirate Gold Mine
- Gold recovered has exceeded revised mine plan by more than 2,000 ounces
- Final recovery from circuit stocks and reconciliation to be completed in May 2016

Exploration

- Preparations for 2016 field season underway
- Field programs in 2016 and 2017 to focus on:
 - Generating value from existing gold resources at Buccaneer, Old Pirate and Hyperion
 - Exploring advanced targets, in particular the highly encouraging Suplejack Trend
 - High potential early stage prospects, such as Wild Turkey and Indefatigable
- Exploration to solely target the Tanami region
 - Area under license reduced by 48%
 - Further farm-outs and relinquishment of less prospective ground planned
 - Tighter geographic focus to reduce costs and maximise effectiveness of field programs
- Positive EM results delivered at the Bumblebee Prospect, drilling to follow

Corporate

- Preparations for capital raising underway
- Chairman Dr Mike Etheridge and non-executive director Dr Helen Garnett resigned
- Ms Susie Corlett was appointed as a non-executive director and Mr Brett Lambert was appointed managing director

Old Pirate Gold Mine

The Old Pirate Gold Mine (Old Pirate) is part of the Twin Bonanza Gold Project located in the Tanami region of the Northern Territory. Gold ore was extracted at Old Pirate by open pit mining and hauled for treatment to the Coyote Processing Plant, located over the Western Australian border.

Mining

During the March 2016 quarter (Quarter) 52,249 tonnes of ore were mined at an average mill reconciled grade of 5.1g/t for an estimated 8,572 ounces of contained gold. The current phase of open pit mining at Old Pirate was completed ahead of schedule just prior to Quarter end, with a life of mine total of 155,176 tonnes having been mined at an estimated average grade of 5.9g/t.

From 1 December 2015 to the completion of mining, the period covering the revised mine plan (ASX 24 December 2015), 71,564 tonnes grading 5.1g/t were mined compared to a forecast of 50,000 tonnes at 6g/t. The additional 21,564 tonnes averaged 3.6g/t and delivered around 2,400 additional ounces of gold to the plant. "Good bye cuts" in the Central and Western Limb pits, where the excavator was used to extract any ore it could reach below the floor of the pit as it retreated from the last bench, contributed to the additional tonnage. However there is no capacity to extend mining further without undertaking substantial waste rock cut-backs, which as previously assessed was not a viable option.

Rehabilitation of the mine site was carried out progressively throughout the Quarter, and by Quarter end the waste dumps had been fully profiled and sheeted with topsoil to promote revegetation. Abandonment bunds have been completed around all the main pits and the Old Glory pit was backfilled. The majority of roads that are no longer required have also been rehabilitated.

Processing

63,851 tonnes at an average grade of 4.7g/t were processed during the Quarter for the recovery of 9,570 ounces of gold. Project to date, 28,161 ounces of gold have been recovered from 146,995 tonnes processed.

From mid-January the plant operated on a continual basis rather than the previous cycle of two weeks operation followed by one week shut down. This enabled accumulated low grade stockpiles to be processed and resulted in record gold production and reduced unit costs.

At the end of the Quarter, 9,785 tonnes of ore remained in stockpiles with an estimated grade of 3.8g/t for 1,185 ounces of contained gold. Estimated gold in circuit at Quarter end totaled 2,866 ounces comprising 500 ounces in the ball mill, 472 ounces in the gravity circuit and 1,894 ounces in the leach circuit.

Production Statistics

Site production costs¹ for the Quarter were A\$939 per ounce of gold recovered. Gold sales during the Quarter totaled 8,440 ounces at an average price of A\$1,642 per ounce.

Production statistics for Old Pirate in the Quarter and project to date are summarised in the table below, with monthly physical performance since operations commenced presented in the following graph. When carbon stripping has been completed and the last gold recovered, a final life of mine gold

¹ Includes mining, processing and business services costs (includes royalties).

production and grade reconciliation will be completed. This exercise may result in some adjustment to reported production figures if there is a material difference between estimated gold in circuit and actual gold recovered.

Old Pirate Gold Mine Production Summary March Quarter 2016			
		March Quarter	Project to Date
Tonnes Mined	tonnes	52,249	155,176
Grade	g/t	5.1	5.9
Contained Gold	ounces	8,572	29,526
Ore Processed	tonnes	63,851	146,995
Grade	g/t	4.7	6.0
Contained Gold	ounces	9,728	28,482
Recovery	%	98.4%	98.9%
Recovered Gold	ounces	9,570	28,161
Gold Poured	ounces	8,890	25,295
Gold Sold	ounces	8,440	24,486

Planned Activities

The remainder of the stockpiled ore was processed post Quarter end and the plant shut down prior to being prepared to be placed on care and maintenance. Gold from the ball mill, gravity circuit and any accumulated gold in pumps, sumps and tanks will be recovered and smelted on site. Gold bearing carbon from the leach circuit will be transported to Perth for stripping with final gold recovery to be completed in May 2016.

For personal use only

Tanami Gold NL has been advised that ABM will not extend the lease on the Coyote Processing Plant when it expires in mid-July 2016. However, ABM will remain responsible for care and maintenance of the plant until the end of the lease period.

Geological data obtained during mining together with existing exploration data, will be used to produce a revised JORC compliant Mineral Resource estimate for the Old Pirate project. An independent specialist consultant will be engaged to calculate and sign-off on the updated Mineral Resource.

The potential to recommence mining at Old Pirate will be evaluated. However it is anticipated that further drilling will be required to improve Mineral Resource definition to a standard appropriate to support a decision to mine and it is unlikely production will re-commence in the short term, and there is no certainty at this stage that a new mine will prove viable. The trial mining processing plant has been retained for possible use in bulk sampling or for small scale commercial operations.

EXPLORATION

As demobilisation from the Old Pirate Gold Mine takes place, the Company is proceeding with re-establishment of the Wilsons camp as an exploration base and is arranging logistical support for the 2016 field season.

Exploration Strategy

An exploration program has been prepared for the 2016 and 2017 field seasons that focuses on:

- Generating value from existing gold resources at Buccaneer, Old Pirate and Hyperion
 - Exploration programs will be tailored to support evaluation of the development potential of existing resources and to enhance viability where possible through resource upgrades and expansion.
- Further exploring advanced targets, in particular the highly encouraging Suplejack Trend
 - Follow up drilling at the Tethys Prospect (formerly Hyperion East) where drilling in 2015 returned gold intercepts including 21m at 2.84g/t, 12m at 3.43g/t and 12m at 3.03g/t (ASX 26 August 2015). ABM has set up an exploration camp and is currently preparing drill pads at the Suplejack Prospect with particular focus on Tethys.
 - Extend exploration coverage of the Suplejack trend onto EL26483, recently acquired from Vango Mining Limited.
- Exploration of high potential early stage prospects, such as Wild Turkey and Indefatigable
 - A systematic predictive approach based on structural geology and multi-element geochemistry will be employed to maximise effectiveness and efficiency of the on-ground programs.
- Exploration management
 - An advisory group of highly experienced and credentialed exploration professionals has been engaged, comprising Dr Scott Halley, Lead Consultant Geochemistry, Dr John Beeson, Lead Consultant Structural Geology and Mr Greg Hall, Lead Consultant Generative Geology.
 - The advisory group will work with the Company's geologists on developing prospectively models and assessing and prioritising exploration targets.

Tenement Management

ABM controlled an extremely large exploration tenement portfolio in the Northern Territory's Central Desert Region with approximately 48,000km² of exploration licences and applications. The Company is

reducing the geographic spread of its operations by farming-out or relinquishing all tenements outside the Tanami district. In recent months, the land area held under licence by ABM has been reduced by 48%, substantially reducing the tenement holding costs. The narrower geographic focus will not only reduce overhead and logistical costs, but is expected to improve the efficiency and effectiveness of the Company's work programs.

Further reductions in land holdings are planned. A number of companies have executed confidentiality agreements to enable them to assess the potential acquisition or joint venture of various tenement packages held by ABM in the North Arunta region or on the margins of the Tanami region. The farm-out/joint venture model has already delivered results for the Company, with Independence Group NL discovering the exciting Bumblebee Prospect at ABM's Lake Mackay Project (ASX 23 March 2016).

The transfer of EL26483 from Vango Mining Limited was completed during the Quarter. EL26483 is situated in the northern portion of the Suplejack trend, which is a core area of exploration focus for the Company.

Lake Mackay Project

Independence Group NL ("IGO") are conducting exploration on ABM's Lake Mackay tenements under an agreement executed in August 2013 (ASX 21 August 2013) under which IGO can elect to enter into a farm-in agreement over the tenements and earn a joint venture interest of up to 70%. This agreement was extended in late 2015 (ASX 7 December 2015).

The Bumblebee Prospect was discovered in 2015 on exploration licence EL24915. Initial air-core drilling of a multi-element surface geochemistry anomaly returned significant precious and base metal values, including 7 metres averaging 3.3g/t gold, 37.7g/t silver, 3.2% copper, 0.9% lead, 1.3% zinc and 0.08% cobalt approximately 30 metres below surface (ASX 6 October 2015).

During the Quarter, results were received for an electromagnetic (EM) survey completed by IGO at the Bumblebee Prospect that has identified a strong and clear conductor in a position consistent with the geochemical anomaly and the sulphides intersected by the air-core drilling. The conductor has a strike length of approximately 500 metres as shown in Figure 1 below.

The conductor has been modelled as a series of three contiguous plates along its strike. The middle plate, centred on easting 588,300mE, starts at 110 metres below surface and has been interpreted to have a steep southerly dip and an unconstrained depth extent of between 200 and 400 metres. The central plate is shown in cross-section in Figure 2, together with the air-core drill intercepts and preliminary interpretation of mineralisation.

The modelled conductor displays characteristics consistent with being associated with mineralisation, however in the absence of deeper drilling there is no conclusive evidence that the source of the conductor is the extension of mineralisation intersected in the air-core program. IGO is planning to drill a series of diamond holes to test the conductor and provide further information on its location, size and source. Down hole EM (DHEM) surveys will be carried out on these planned holes with the aim of further defining the target. This work is expected to be performed in the June Quarter of 2016.

In addition to enhancing the prospectivity of the Bumblebee Prospect and providing a clear target for further drilling, the EM program appears to indicate that soil geochemistry and ground electromagnetic surveying could be effective and efficient exploration tools at the Lake Mackay Project.

CORPORATE

Capital Raising

During the Quarter, ABM announced a capital raising comprising a 3 for 5 fully underwritten non-renounceable rights issue to raise approximately \$8.2 million together with a \$3.8 million debt facility (ASX 9 March 2016). The proceeds from the rights issue were to be principally used for the exploration and evaluation of the Company's core gold properties, while funds drawn down from the debt facility were to be placed in interest bearing term deposits to cash back performance bonds associated with the Company's mining and exploration properties. The rights issue was priced at \$0.04 per share and would have seen approximately 205 million additional shares issued.

Pacific Road Capital Management Pty Ltd as trustee for Pacific Road Fund II Managed Investment Trust (PRCM) agreed to fully sub-underwrite the Rights Issue and provide the Debt Facility. PRCM is the Company's largest shareholder with a holding of approximately 19.9% and their financial commitment enabled the company to ensure that the full funding exercise was guaranteed.

Prior to settling on the structure and underwriting arrangements for the capital raising, the Company considered a number of other alternatives, including an alternative proposal that it had received from APAC Resources Capital Limited, a wholly owned subsidiary of Hong Kong listed company APAC Resources Limited (APAC). APAC is ABM's second largest shareholder with an interest in the Company of approximately 14.8%. The APAC proposal involved a \$14 million renounceable rights issue priced at \$0.0225 per share, fully underwritten by APAC, which would have resulted in approximately 622 million additional shares being issued.

Whilst the structure and a number of terms varied between the two major shareholders supported funding proposals, the dominant reasons for ABM electing to proceed with the announced rights issue were the higher pricing and substantially lower level of dilution of non-participating shareholders.

Following ABM's announcement of the capital raising, the Takeovers Panel announced that it had received an application from APAC concerning the Rights Issue (TOV^[1] 11 March 2016).

After receiving and considering submissions from interested parties, the Takeovers Panel declared that ABM's proposed rights issue constituted unacceptable circumstances and the Company was ordered to not proceed with the rights issue (TOV 8 April 2016). The reasons for the Takeovers Panel decision were published on their website on 28 April 2016.

In order to obtain greater certainty in relation to a capital raising to satisfy its funding requirements, the Company sought a review of the Initial Panel's decision and submitted a restructured rights issue proposal to the Review Panel intended to address concerns raised by the Initial Panel.

The Review Panel has released its decision (TOV 29 April 2016) in which it stated that, on the material provided, it considered that ABM's restructured rights issue proposal would be unlikely to be unacceptable. The Review Panel decided not to vary the Initial Panel's orders, on the basis that the proposal was not yet final, but noted that it considered that this decision did not prevent ABM proceeding. ABM therefore intends to proceed with a new rights issue based on the structure presented to the Review Panel.

Board Restructuring

In March 2016, ABM Chairman Dr Mike Etheridge and non-executive director Dr Helen Garnett resigned from the board. Dr Etheridge had previously advised the board that he intended to step down at an appropriate time as the first step in a broader restructure of the board and an executive search firm was engaged to identify a new independent non-executive chairman. This search is now well advanced. In the interim, non-executive director Mr Richard Procter was appointed chairman. Mr Procter will resign from the board on the appointment of the new chairman.

Also in March, Ms Susie Corlett was appointed as a non-executive director and Mr Brett Lambert was appointed managing director (having served as CEO for the preceding four months). This leaves a board comprising one nominee from each of APAC and PRCM with a chairman and managing director independent of the major shareholders.

BNP Paribas Nominees Pty Limited ("BNP Paribas") as custodian for APAC, issued a 249D notice requisitioning a General Meeting of shareholders to seek the removal of all the Company's directors other than APAC's representative and the appointment of two more nominees of APAC to the ABM board (ASX 18 February 2016). After the above board changes took place, BNP Paribas/APAC lodged a second 249D notice seeking the removal of the non APAC nominated directors and the appointment of the same two additional APAC nominees (ASX 9 March 2016).

BNP Paribas/APAC subsequently withdrew the first 249D notice and ABM cancelled the associated General Meeting (ASX 30 and 31 March 2016), leaving just one General Meeting scheduled for 9 May 2016 to consider the resolutions proposed in the second 249D notice. The directors, except for the APAC nominee, of the Company recommended that shareholders vote against all resolutions to be put to the meeting.

^[1] TOV relates to a Takeovers Panel press release published on their website and on the ASX under the Company's code, ABU.

The chairman search process has effectively been completed with the formation of a short list of highly qualified and experienced candidates, independent of any major shareholder, who have confirmed their interest in the role. However the 249D notice and Takeovers Panel proceedings have delayed this appointment. ABM is hopeful that the new chairman can be engaged promptly after the 9 May 2016 General Meeting, if not before, thereby finalising the transition to a refreshed, smaller and more effective lower cost board.

Cash Position

At Quarter end, the Company held \$7.2 million in cash and gold bullion valued at \$1.3 million, with an additional \$3.8 million deposited in a restricted account to cash back performance bonds. The Company has no debt.

The Company's loan facility and bond and guarantee facility with the ANZ bank have been terminated and all securities held by the ANZ over the Company's assets have been removed. ABM has entered into a new bonding and facility agreement with the ANZ which is fully cash backed and does not require any securities.

Signed

Brett Lambert
Managing Director

Competent Persons Statements

The information in this announcement relating to exploration results is based on information reviewed and checked by Mr Alwin van Roij who is a Member of The Australasian Institute of Mining and Metallurgy. Mr van Roij is a full time employee of ABM Resources NL and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 edition of the "Australasian Code for Reporting Exploration Results, Mineral Resources and Ore Reserves". Mr van Roij consents to the inclusion in the documents of the matters based on this information in the form and context in which it appears.

During the Quarter the following ASX announcements regarding the Company's activities and projects were released.

Date	Headline
31/03/2016	Cancellation of General Meeting and Change to Timetable
30/03/2016	Withdrawal of Section 249D Notice

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities;** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards;** ASX will accept, for example, the use of International Financial Reporting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
