ASX Market Announcements

Zyber signs expanded partnership agreement with Redcore to resell and build additional products based on strong user authentication.

Zyber Holdings Limited (ASX: ZYB) ('Zyber' or 'the Company'), a leading provider of secure file sharing software, today announced it has signed a reseller agreement with Redcore Pty Ltd ('Redcore').

The agreement enables Zyber to resell Redcore's KeyVault product; a strong zero footprint two factor authentication product used to secure access to high value Web services. KeyVault provides active defenses against current day malware threats, can be embedded in mobile device applications running on iOS or Android, can be installed in Windows and Mac applications and is seamlessly upgraded in the field to address new and emerging threats. The agreement will allow users of Zyber software with a simple way to add strong user authentication to their existing environments.

KeyVault is an industry proven product with a number of successful deployments including a major Australian bank and Government agencies in Australia and New Zealand with 1M+ users and growing. KeyVault requires a minimal integration and implementation effort – KeyVault does not need to replace the existing authentication scheme but adds additional authentication factors reducing the complexity to implement a strong two-factor authentication solution.

The expanded partnership also enables Zyber to build derivative works of the KeyVault product giving Zyber's customers the ability to layer additional security and authentication products on top of the already successful platform.

"Our partnership with Redcore will provide expanded product offerings and additional security layers for Zyber customers. We are strengthening the way organizations authenticate remote user access to the Zyber centralized file sharing framework based on our customer's needs," said Clay Epstein, CEO, Zyber. "An off the shelf approach does not always work for security, so at Zyber we are customizing our platform to meet customer-specific security, risk and compliance needs. We are very pleased to expand our partnership with a security leader like Redcore that has significant expertise in developing strong authentication solutions across global industries."

Redcore founder and co-owner Joseph Failla said, "We see a positive synergy with Zyber on developing additional products based on Zyber's file

sharing platform and the KeyVault product. Redcore provides security services to a number of major companies in Australia and we have identified some clients that can benefit from our combined technologies and services”
