## FULL OPERATING STAGE LICENCE RENEWED

Lynas Corporation Limited ("Lynas") (ASX:LYC, OTC:LYSDY) is pleased to confirm that the Malaysian Atomic Energy Licensing Board (AELB) has renewed the Full Operating Stage Licence (FOSL) for the Lynas Advanced Materials Plant (LAMP) for three years until September 2019.

The renewal follows a rigorous review undertaken by the AELB and other independent regulatory bodies in Malaysia, all of whom have concluded that the LAMP is in compliance with applicable regulations.

"We are delighted that our licence has been renewed reflecting four years of safe operations at the LAMP," said Lynas CEO Amanda Lacaze.

"Lynas now has four years of operational data which shows there has been no increase in background radiation levels 1km, 5km, 10km or 20km from the plant. There has been no adverse impact on the nearby residents of Kuantan or the surrounding villages and all water discharges have been measured to be safe at all times for the community.

"Importantly, Lynas continues to provide online real time operational readings directly to the authorities which are also accessible to the public via the websites of the AELB and the DOE, and we have clear evidence and certifications from independent bodies that our operations and emissions are safe.

"Lynas is committed to continuing to be a valuable contributor to the local Kuantan and broader Malaysian communities and the renewal of the FOSL for an extended three year period is an essential foundation to that commitment," Ms Lacaze concluded.
