Alcidion Releases Miya iScheduler

Alcidion Group Limited (ASX:ALC) is pleased to announce the release of an advanced suite of electronic referrals software within its Miya family of advanced health informatics products for faster, better health care.

Known as Miya iScheduler, the software is able to significantly improve the access of patients to hospital outpatient services, ambulatory services (community and hospital) and telehealth services delivered to remote locations and the home. The software is of high value to GP's, allied health professionals, community nurses and other care providers who are interacting with hospitals and other service providers to arrange timely care and support for their patients.

Miya iScheduler is a multi-function solution comprising triage, appointment scheduling, electronic referrals, wait list management and telehealth for ambulatory, outpatient and remote patient services.

The Miya iScheduler offering is the result of Alcidion's worldwide search for a "best of breed" comprehensive referrals and appointments solution to complement Alcidion's internal Miya eReferral product which recently went into operation in Northern Tasmania.

Alcidion has acquired rights to the Miya iScheduler technology from Eceptionist Incorporated, a Houston, Texas based innovator, and is proud to offer, deploy and support the Miya iScheduler solution across the Australian and New Zealand health services.

Miya iScheduler has the strategic advantage of being widely installed as the solution to complex referrals, appointment scheduling, wait list management and telehealth requirements in many advanced western health systems, including those of the United Kingdom, Canada and the United States.

The global capability of iScheduler is being combined with Alcidion's Australian know-how and experience to ensure the very significant benefits of the iScheduler offering are delivered across Australia and New Zealand.

Ray Blight said "we believe the breadth of functionality available within Miya iScheduler will be of appeal to large scale, multi-function, multi-service implementations - large in the sense of high numbers of patients in dense urban areas, but also for small populations spread over large geographical areas, where the telehealth capability comes into play".
