

ASX RELEASE

13 December 2018

SECOS customer Purus achieves first sales of eco-friendly products powered by SECOS BioHybrid™ resin

- World-leading supplier of cleanroom consumables, Purus, achieves first sales of the BioHybrid™ Adhesive Mat developed in partnership with SECOS
- BioHybrid Adhesive Mats are a world-first contamination control product containing renewable plant-based materials, providing an environmentally friendly alternative for socially responsible organisations
- Purus and SECOS are introducing these innovative products to large companies across the US and Europe.
- SECOS remains well-positioned to capitalise on growing momentum in the global move to sustainable plastics and packaging

Sustainable and eco-friendly bioplastics developer SECOS Group Limited (ASX: SES, "the Company") is pleased to announce that its customer, global cleanroom consumables supplier Purus, has achieved first sales of its BioHybrid™ Adhesive Mat developed in partnership with SECOS and derived from SECOS' BioHybrid™ resin.

BioHybrid Mats are the world's first contamination control products containing renewable, plant-based materials. Purus is selling the BioHybrid™ Adhesive Mat to large companies across the US and Europe, capitalising on the growing demand for environmentally-friendly products. The mats remove and contain dirt and dust from foot traffic and equipment wheels, capturing 99% of all foot-borne contaminants.

PURUS collaborated with SECOS to develop these innovative products. As a key product input, using the BioHybrid™ resin from SECOS, it is anticipated that as product awareness builds sales volume will increase.

Healthcare and industrial cleanroom employees using Purus BioHybrid mats

The term BioHybrid™ refers to the special type of resin blend used to create individual layers on the mats. Traditionally, these layers have been coated with 100% low-density polyethylene film, which comes from non-renewable resources.

BioHybrid™ Mats differ in that they are powered by SECOS' resin, offering custom blends of polyethylene with thermoplastic starch (TPS) which is made from renewable, sustainable raw materials. By replacing a percentage of the standard resin with SECOS' bioplastic resin, PURUS mats offer a significantly reduced carbon footprint in comparison to petrochemical polymers.

- Low Cost
- Durable
- Easy to install
- Easy to remove
- Capture 99% of all foot borne contaminants
- Anti-microbial Adhesive
- Low profile
- Recyclable

SECOS Executive Chairman, Richard Tegoni, said:

"We are excited to be involved in the development of an environmentally friendly cutting-edge product and anticipate that we will be involved in further significant opportunities as the global environmental awareness movement grows."

"Our collaboration with Purus, and sale of eco-friendly BioHybrid™ mats into Europe and the US, unlocks significant opportunities for SECOS as the company expands its reach into large and attractive international markets."

BioHybrid™ mats are just one of a number of earth-friendly initiatives Purus is embarking upon.

Purus President, Dennis Baldwin, said:

"It is impossible to plan for the future without focusing on sustainability. We are looking at every step of the process to ensure that we are doing everything we can."

Based on Purus' current annual production volume, Purus BioHybrid Mats will save 135 metric tons of CO₂ emissions, the equivalent of carbon sequestered by 160 acres of forests in one year, according to an analysis by ExcelPlas.
