- Creating a world class Mineral Sands deposit in Sri Lanka
- Investor Presentation
 - 21 February 2020

Marvellous Mannar

DISCLAIMER & FORWARD LOOKING STATEMENT

This presentation has been prepared by Titanium Sands Limited (“TSL”). The information contained in this presentation is a professional opinion only and is given in good faith. Certain information in this document has been derived from third parties and though TSL has no reason to believe that it is not accurate, reliable or complete, it has not been independently audited or verified by TSL. Any forward-looking statements included in this document involve subjective judgment and analysis and are subject to uncertainties, risks and contingencies, many of which are outside the control of, and may be unknown to, TSL. In particular, they speak only as of the date of this document, they assume the success of TSL’s strategies, and they are subject to significant regulatory, business, competitive and economic uncertainties and risks. Actual future events may vary materially from the forward-looking statements and the assumptions on which the forward-looking statements are based. Recipients of this document (Recipients) are cautioned to not place undue reliance on such forward-looking statements. TSL makes no representation or warranty as to the accuracy, reliability or completeness of information in this document and does not take responsibility for updating any information or correcting any error or omission which may become apparent after this document has been issued. To the extent permitted by law, TSL and its officers, employees, related bodies corporate and agents (Agents) disclaim all liability, direct, indirect or consequential (and whether or not arising out of the negligence, default or lack of care of TSL and/or any of its Agents) for any loss or damage suffered by a Recipient or other persons arising out of, or in connection with, any use or reliance on this presentation or information. This presentation is not an offer, invitation, solicitation or recommendation with respect to the subscription for, purchase or sale of any security, and neither this presentation nor anything in it shall form the basis for any contract or commitment whatsoever. All amounts in Australian dollars unless stated otherwise.

Competent Persons Statement

This presentation contains references to exploration results and other technical comments which have been reviewed and compiled by James Searle BSc (hons), PhD, a Competent Person who is a Member of the Australian Institute of Mining and Metallurgy, with over 38 years of experience in metallic and energy minerals exploration and development, and as such has sufficient experience which is relevant to the style of mineralisation and type of deposits under consideration as a Competent Person as defined in the 2012 Edition of the “Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves”. Dr Searle is the Managing Director of Titanium Sands Limited and consents to the inclusion of this technical information in the format and context in which it appears. The Company confirms that it is not aware of any new information or data that materially affect the information included in the relevant market announcements and, in the case of estimates of the Proposed Tenure Acquisition or the Company’s existing Mineral Resources that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply with respect to the resource block model and total heavy mineral content and have not materially changed. The Company confirms that the form and context in which the Competent Persons’ findings are presented have not been materially modified from the relevant original market announcements.

Why Mineral Sands?

- Mineral sands are old beach, river or dune sands that contain concentrations of the important minerals, [rutile](#), [ilmenite](#), zircon and monazite.
- These minerals all originally grew as crystals in igneous rocks such as granite or basalt and some metamorphic rocks. Over millions of years, these rocks were weathered and eroded. The harder minerals including quartz were washed down to the sea by heavy rainfall and fast flowing streams.
- The minerals were then carried back up onto the beach by waves. As the waves washed up and down on the beach, they carried the lighter quartz grains with them back into the sea, leaving the grains of the heavy minerals behind on the beach. Wind also helped to concentrate the heavy minerals by blowing away the lighter quartz sand. These processes were repeated many times over millions of years, eventually creating a large deposit of mineral sands on the beach.
- As the sea level rose and fell over geological time, the shoreline also moved. As this happened, the deposits of mineral sand were covered by more sand and built up or were eroded and redeposited elsewhere. This is why we sometimes find mineral sand deposits many kilometres inland and well below sea level.

Mineral Sands, where is it used?

- There are two core product streams in the Mineral Sands industry being : titanium minerals (also referred to as titanium dioxide ore feedstocks or TiO_2 ore feedstocks) and zircon.
- **Titanium Minerals**
Titanium minerals – ilmenite, leucoxene and rutile – are primarily used as feed stock for the production of titanium dioxide pigment, with a small percentage also used in titanium metal and fluxes for welding rods and wires. Titanium dioxide is the most widely used white pigment and is used in the manufacture paint, ceramics, various opaque uses and lightweight mixed metals including titanium metal.
- **Zircon**
Zircon has a range of end-uses, the largest of which is ceramic products, which accounts for more than 50 per cent of global zircon consumption.

Mineral Sands value proposition

- The value proposition for TSL mineral sands product is being developed and advanced through ongoing off-take discussions which are expected to take shape throughout 2020 as the Mannar Island projects nears production.
- **Market indications suggest a base case pricing for premium sulphate ilmenite feedstock product of between USD\$180-220p/t (\$240 high grade) and rutile at around USD\$1,118 p/t.**
- Zircon forms the basis for specialty uses include fibre optics, glass, paints, catalysts, underarm deodorants, adhesives, cosmetics, dental ceramics plus various research applications. **Market indications suggest that zircon is selling for around USD\$973p/t.**
- Garnet is used as an abrasive in high pressure paint stripping and industrial cleaning solutions and is **sold for between USD\$200 – USD\$220p/t.**

Benefits of Sri Lanka

- Sri Lanka is a democratic nation of approximately ~21m people
- Sri Lankan government is supportive of foreign investment and local job creation.
- Mannar Island has excellent existing infrastructure including access to rail, road, water and power and is close to existing shipping ports.
- Sri Lanka is an attractive mining jurisdiction with Chinese, Japanese, Indian and UAE offtake potential.
- Sri Lanka provides easy access to major global customers.
- Sri Lanka provides an attractive investment proposition for offtake partners and end users.

Sri Lanka's trade with China has been growing faster than its trade with the rest of the world over the last 5 years

Sri Lanka is a Gateway to International Markets

Attractive Mining Jurisdiction with Chinese Offtake Potential and other international markets

Sri Lanka forms part of China's 'One Belt, One Road' trade route with Chinese interests controlling 70% of the recently completed A\$1.3 Hambantota Port connecting the Company with Chinese plants hungry for offtake to satisfy excess capacity.

Bilateral trade with China

Sri Lanka's trade with China has been growing faster than its trade with the rest of the world over the last 5 years and China has emerged as:

- Sri Lanka's 2nd largest trading partner
- 2nd largest source of imports after India
- 6th largest export market after USA, UK, India, Germany, Italy.

Titanium Sands – Mannar Island Project

- Mannar Island is approximately 100km North of Iluka's Puttalam Quarry mineral sands project.
- The Titanium Sands project encompasses almost 204km² / 93% (approx.) of Mannar Island in Sri Lanka's North West.
- Titanium Sands has a high grade surface exposed mineral resource estimate of 90Mt* with 68.7% in the Indicated category.
- Recent RC Aircore drilling has identified major resource potential at depth beneath the surface resource that could if realised sustain a 50+ year dredge mining operation.
- The Mannar Island deposit has significant exploration potential within its current tenements (<https://www.asx.com.au/asxpdf/20200128/pdf/44dxdjvpy22gi.pdf>)
- The scoping study currently underway is examining a long life dredge mining operation with areas of supplementary dry mining.
- Off Take Partner discussions will continue throughout the first half of 2020.
- The increasing resource and scale of the Mannar island project is continuing to build shareholder value.

Mannar Project has the potential for an extended mine life.

* On completion of BAL acquisition.

The Mannar Island project has significant potential for an extended mine life.

Mineral Resource estimations for the Mannar Domains with a 2% THM cut-off.

Resource

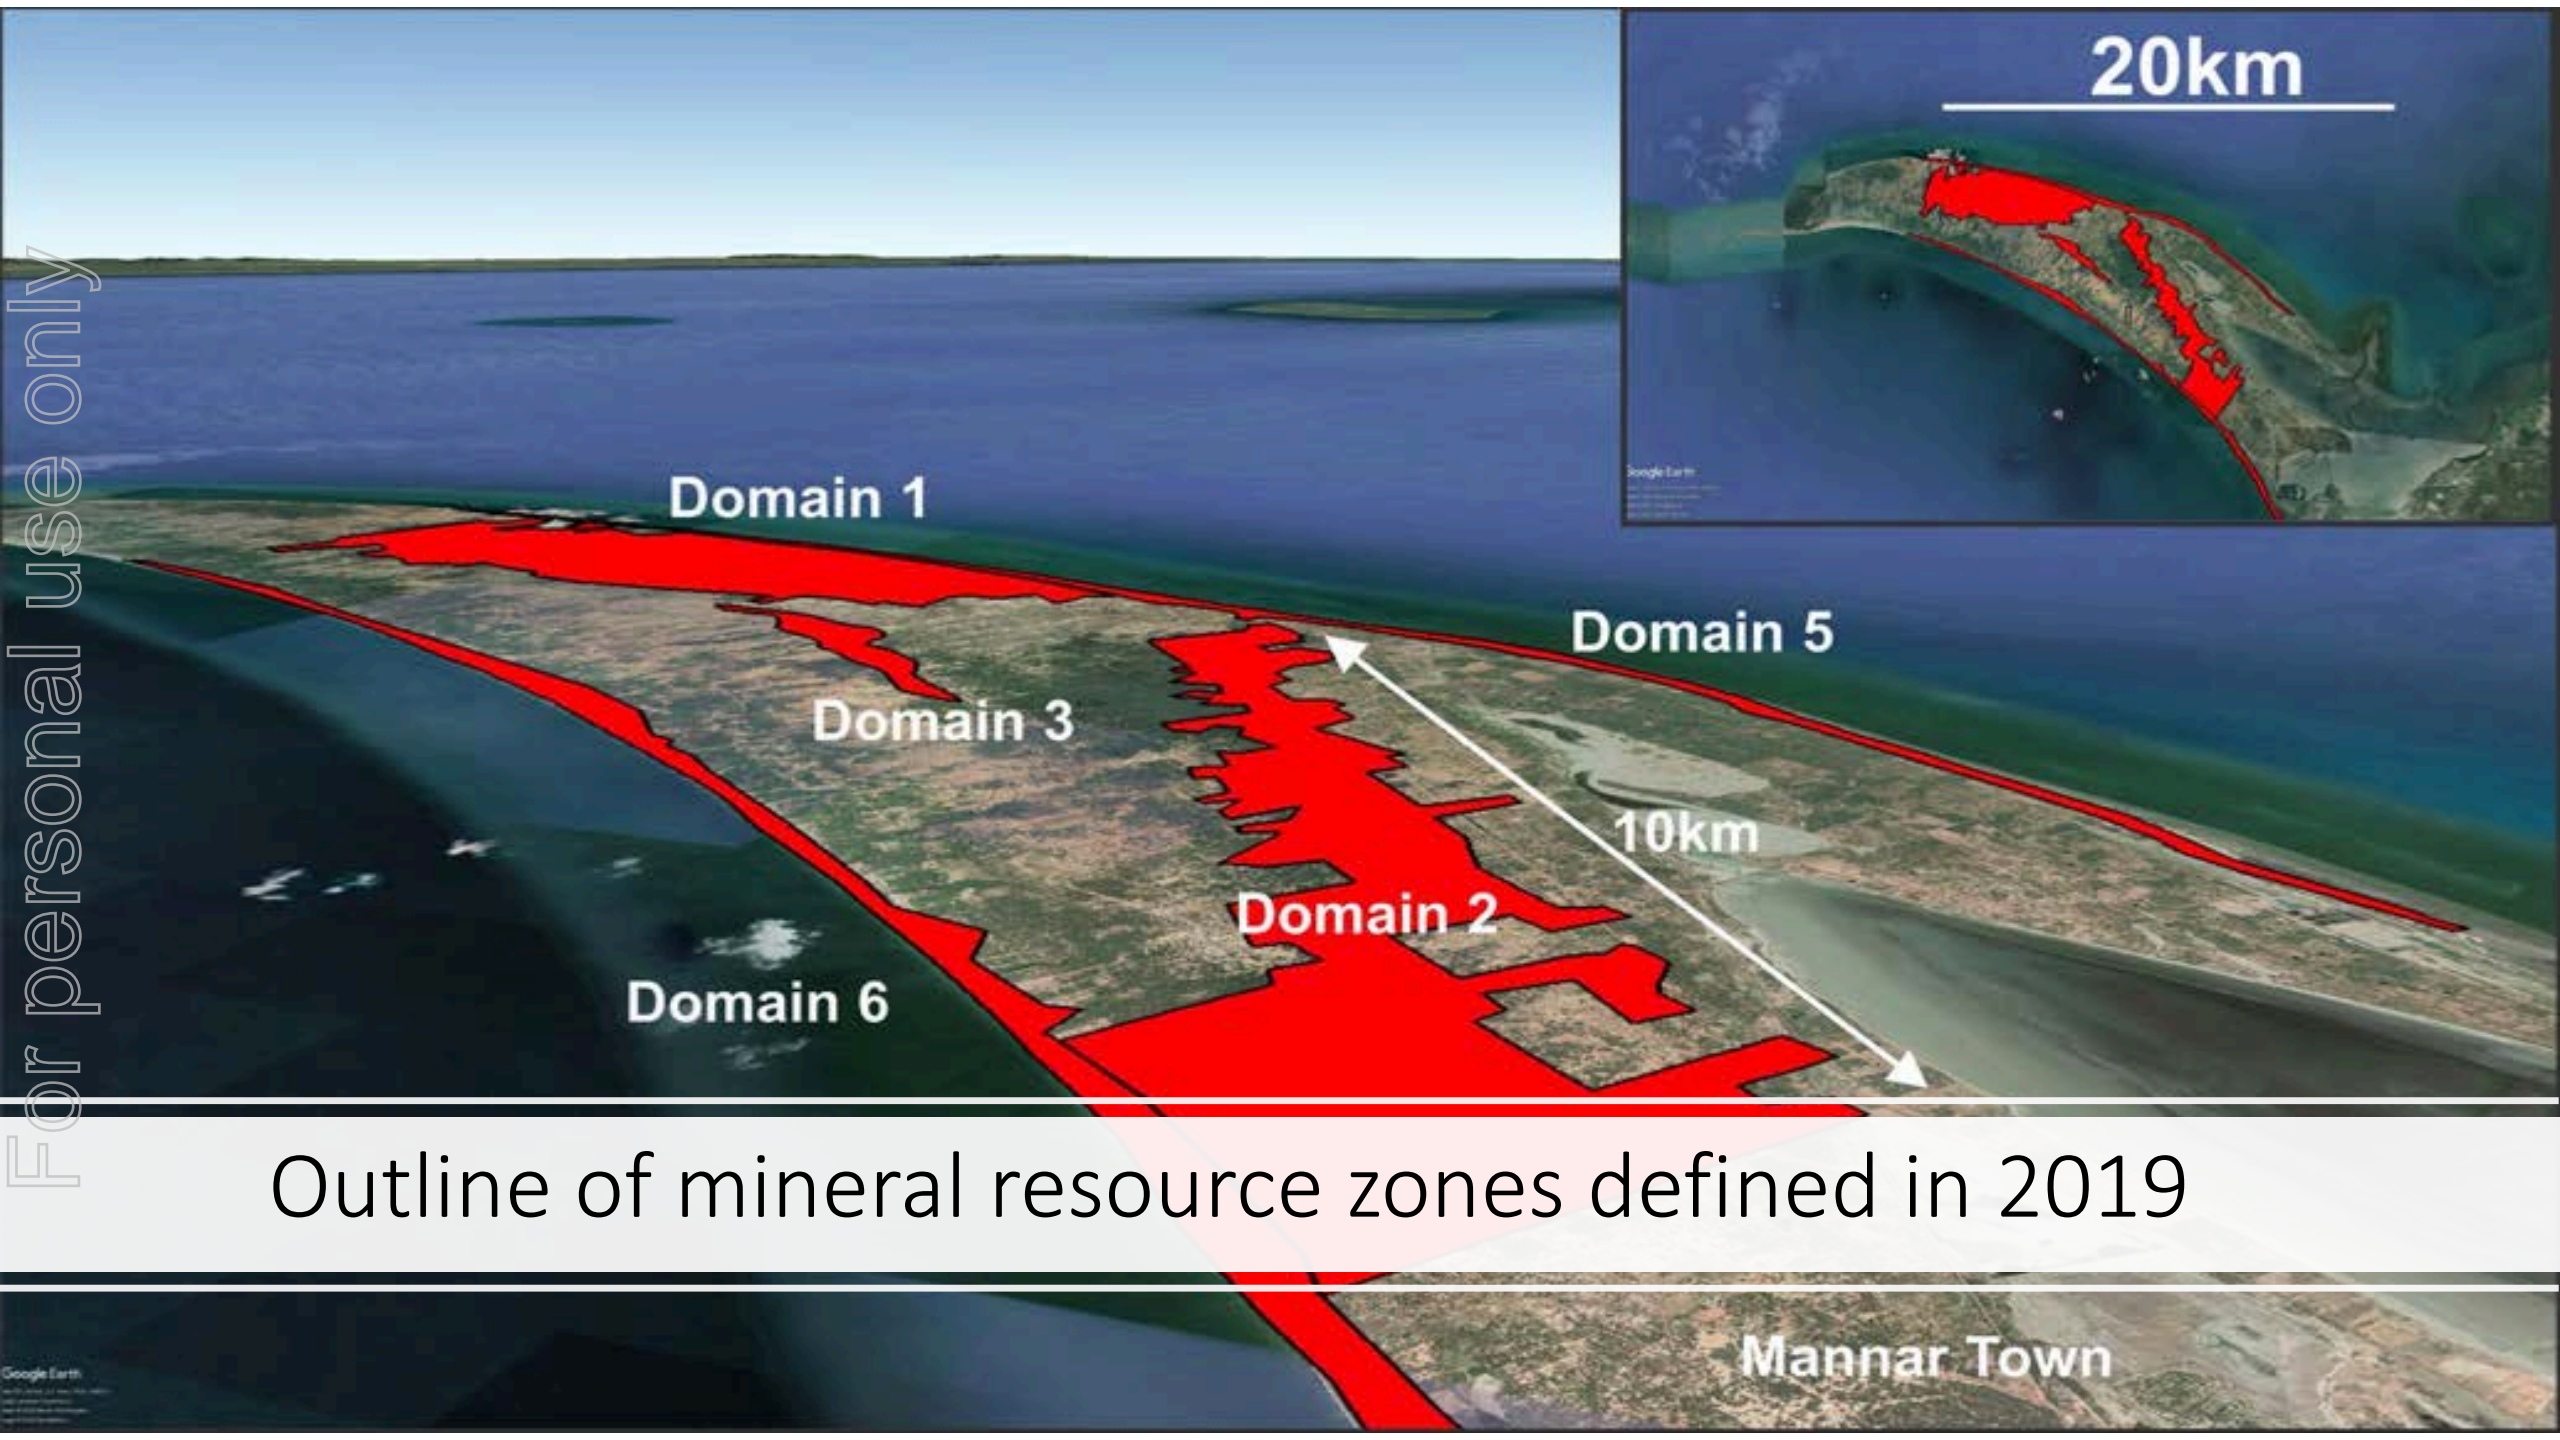

- Royalty rate in Sri Lanka for industrial minerals is 4% if not exported and 5% when exported.
- Confirmed **JORC Resource of 90.03MT* at 6.6%THM** with **61.88Mt in the Indicated category.**
- The resource drilling has defined an extensive area of heavy mineral sands up to 2.5km wide and 15km long.

Outline of mineral resource zones defined in 2019

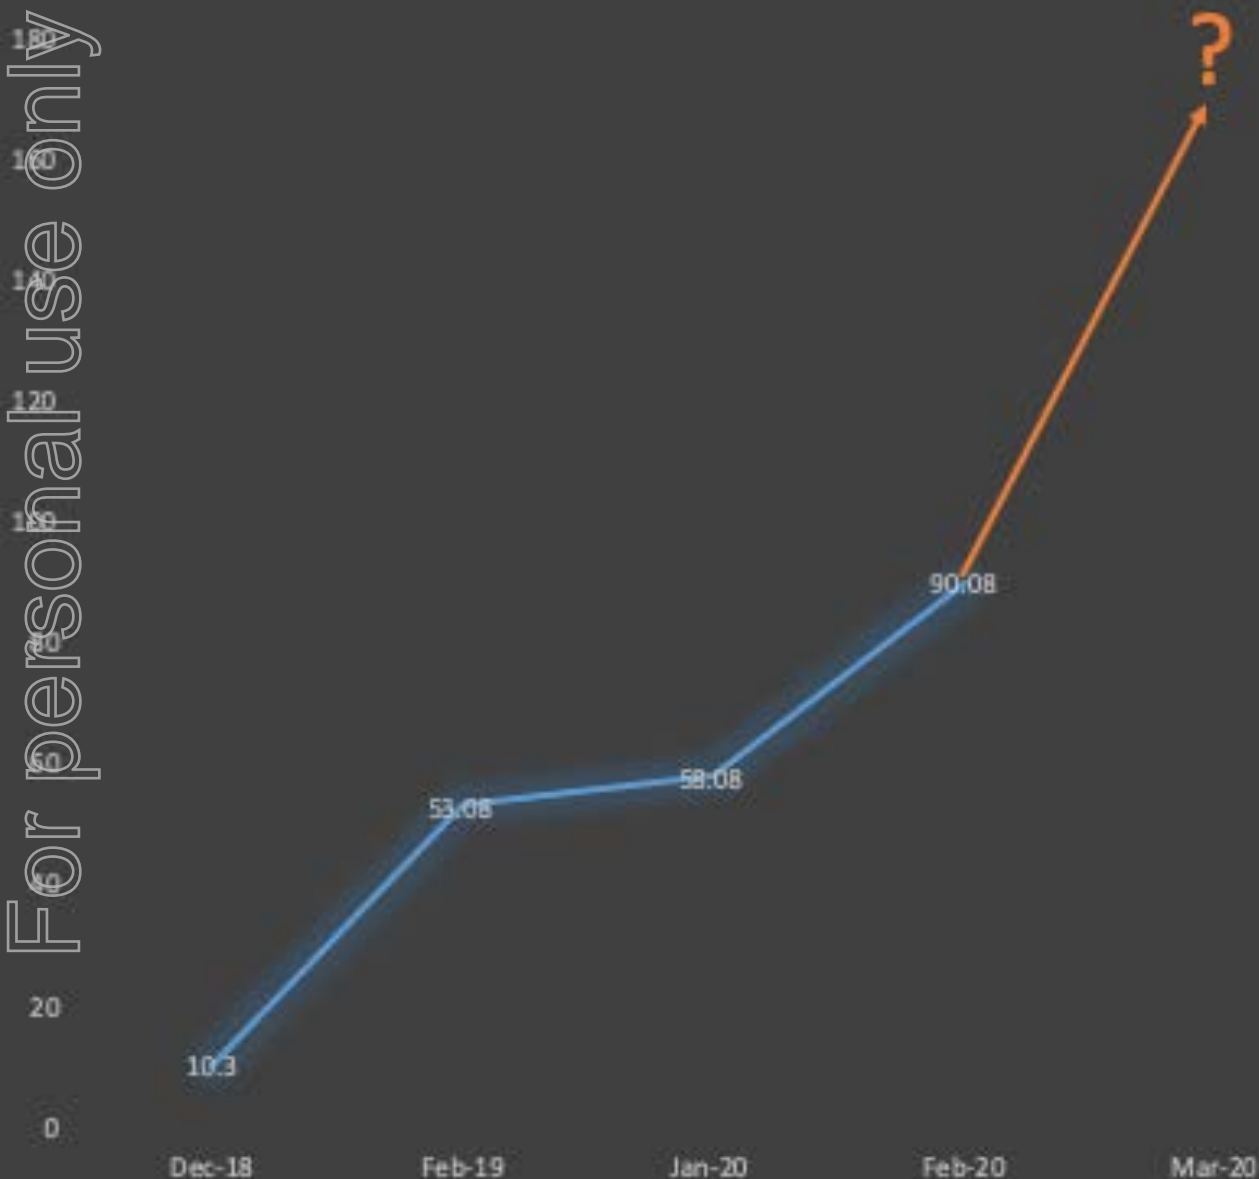

Mannar Island
resource has
increased 774%
since December
2018

(Including acquisition target).

Assay Results

indicate potential uplift on existing resource

RC Aircore depth drilling underneath existing resource indicates widespread heavy mineral concentration down to at least 12m below surface. The depth extension represents an exploration target which based on assay results received* **could grow the project multiple times.**

* <https://www.asx.com.au/asxpdf/20200205/pdf/44dv0t2q7xdty0.pdf>

Further exploration target adjacent to existing mineral resource shows great potential for increased HMS deposits.

Resource % Increase (Since Dec 18)

titaniumsands
LTD

Strong Team – Aligned vision

- Experienced Board and Management
- Track record of delivering outstanding exploration and expansion results
- Quality outsourced hands on consultants at Mannar Island
- Full time on site Geo throughout exploration
- Analysis and lab results provided by world renowned South African Laboratory.
- The board has extensive mining, law and capital market experience.

HEAVY MINERAL PROJECT – SRI LANKA MEETS ALL THE CRITERIA

Primed for Rapid Development

High Grades

- Grades of high quality ilmenite amongst the highest in the world for a substantial deposit.
- Rutile and zircon minor but valuable components of the product suite.

Simple Operation

- Estimated low cost expansion drilling given surface mineralization.
- Very low slimes content (1-2%) will assist processing.

Stable Location

- Mining friendly jurisdiction.
- Politically stable economy.
- Established railway, port, road and power infrastructure .

Strong Demand Fundamentals

- Discussing demand with a number of off take partners

PROJECT HIGHLIGHTS

High Grade JORC Resource

- Combined JORC indicated/inferred resource of 90.03Mt* @ 6.60% THM from low cost drilling program.

Clear strategy to further upgrade resource

- RC Air Core drilling target results pending. Based on Assay results as announced, total deposit anticipated to grow multiple times.

Ongoing exploration potential

- Potential southern and northern zones identified, adjacent to existing resource as well as sonic drilling potential below RC zones.

Scoping Study Underway

- Road to production to be highlighted in scoping study, paving way for low cost dredge mining production on Mannar Island.

Attractive Mining Jurisdiction and offtake partners

- Sri Lanka forms part of China's 'One Belt, One Road' trade route.
- Discussions ongoing and to continue with a number of end users and partners from around the world.

* On completion of BAL acquisition.
