Register of ASX Operating Warrant and AQUA Rule Waivers

Present Application

Where it can be shown that an ETF substantially satisfies the current definition except for matters that may be unnecessarily restrictive, minor or inconsequential then ASX will assess the impact of these in the light of current market trends both in Australia and overseas. Many of the products currently being developed, while still an ETF under all other requirements of the rules, are not made up of underlying securities (e.g. Foreign Exchange or gold bullion) and thus provide for the issue of new Equity Securities in return for the subscriber transferring cash to the scheme rather than a portfolio of Securities as required by limb (iii).

There is also growing demand for the use of ETFs as an investment vehicle which is now being reflected in both market demand and public policy considerations.

The Proposed (Bond) ETF is designed to measure the performance of the Australian fixed rate bond market. It is a broad, market value weighted benchmark, split across investable "investment grade", Australian dollar denominated bonds issued in the Australian market by companies and governments (or semi-government entities), with maturities greater than one year.

The Proposed (Govt) ETF is a sub-set of the S&P/ASX Australian Fixed Interest Index. The Index comprises Australian dollar denominated bonds issued in the local market by the Australian Government (Treasury Bonds) and by the governments of Australian States and Territories and semi-government entities, in each case with maturities greater than one year.

The underlying policy provides that ASX may waive a requirement where it can be shown that the ETF substantially satisfies the current definition, except matters that are unnecessarily restrictive, minor or inconsequential.
