ASX Packs and Bundles provide users with an exchange alternative to OTC Swaps and enable hedging activity for FRA and Swap traders. Packs and Bundles allow users to gain access to the most actively traded short-term interest rate derivatives product in the Asian region with the ease of a single transaction and greater capital efficiency.

Packs and Bundles are an efficient way to trade a 1, 2 or 3 Year Swap exchange equivalent in a single transaction, with the added benefits offered by exchange traded markets.

**Packs**
A Pack is a strip of four successive Bank Bill Futures products that allows users to trade segments of the yield curve in a single transaction, without the legging risk inherent with trading each Bank Bill Futures contract separately. ASX offers three Australian Bank Bill Futures Packs:

1. **White Pack on 90 Day Bank Bill Futures**
   (1st to 4th quarterly expiry months)
2. **Red Pack on 90 Day Bank Bill Futures**
   (5th to 8th quarterly expiry months)
3. **Green Pack on 90 Day Bank Bill Futures**
   (9th to 12th quarterly expiry months)

**Bundles**
A Bundle is a strip of successive Bank Bill Futures products covering more than four successive futures contracts. The first contract in a Bundle is the 1st quarterly contract in the respective Bank Bill Futures contracts. ASX offers two Australian Bank Bill Futures Bundles:

1. **2nd Year Bundle on 90 Day Bank Bill Futures**
   (1st to 8th quarterly expiry months)
2. **3rd Year Bundle on 90 Day Bank Bill Futures**
   (1st to 12th quarterly expiry months)

**Providing trading flexibility**
Packs and Bundles provide trading flexibility in managing interest rate exposure and allow you to execute additional trading strategies. Packs and Bundles:

- Allow users to trade segments of the yield curve in a single transaction.
- Are traded as an average price of the constituent Bank Bill Futures contracts, providing a transparent mechanism for users to match an executed Pack or Bundle price with allocated leg prices.
- Are available to trade at the narrower tick increment of 0.005 compared to outright Bank Bill Futures that trade at 0.01 increments. Allocated Bank Bill Futures will clear at the narrower tick increment.

Upon execution of a Pack or Bundle on ASX Trade24, underlying Bank Bill Futures positions are allocated through to ASX Clear (Futures). The allocated Bank Bill Futures will be marked-to-market together with Bank Bill Futures created from outright futures trades. Allocated Bank Bill Futures contracts benefit from the same margin offsets available when trading outright Bank Bill Futures contracts.

**90 Day Bank Bill Futures**
Underlying 90 Day Bank Bill Futures are actively traded on ASX Trade24. They are ranked amongst the Top 15 short-term interest rate futures contracts in the world by turnover. In 2013, just over 29 million Bank Bill Futures contracts were traded, a 36% increase from the previous calendar year.

Packs and Bundles

Cost efficiency
Packs and Bundles provide users with the benefit of trading a single product in order to gain multiple Bank Bill Future contract exposure, thereby reducing legging risk inherent with trading individual futures contracts.

Tighter bid-ask spreads for Packs and Bundles - 0.5 basis point increments - allows for Bank Bill Futures positions to be established at a finer price than through trading the individual contract months.

Trading ASX Packs and Bundles 90 Day Bank Bill Futures
Trading of Packs and Bundles is conducted on-market via ASX’s electronic platform ASX Trade24 and off-market through block trade and exchange for physical transactions.

Leg price allocation procedure
Upon execution of a Pack or Bundle, underlying Bank Bill Futures prices will be determined through a strip leg allocation process.

The previous Daily Settlement Prices (DSP) of the underlying futures contract will be used as a starting point and adjusted by a price adjustment factor to achieve an implied Pack or Bundle price which equates to the price of the executed underlying futures contracts.

Price adjustments will be made via a consistent proportional price movement from the DSP with the exception that the underlying futures contract with the longest dated expiry will be further adjusted up or down in increments of 0.005 to the extent that such adjustment will achieve a more accurate implied Pack or Bundle price.

A working example of the leg price allocation process is outlined in the Pack and Bundle Allocation Presentation available on the ASX website. Users can also estimate leg prices by the Pack and Bundle Leg Allocation Calculator also available on the ASX website.

Leg price confirmation messages
Following determination of the underlying leg price, the buyer and seller of the transaction will receive a series of FIX text messages notifying each of the details of the trade including deal numbers, time stamps, strip price, leg codes and leg prices. Further information regarding the leg price confirmation message is outlined in the ASX Trade24 Market and Functionalities Guide, available on the ASX website.

Data vendor codes
For updated data vendor codes, please see the Interest Rate Derivatives section at www.asx.com.au/prices/asx24-data_vendor_codes.htm

---

2 Leg allocation and notification will occur within 10 minutes of the Pack or Bundle order being executed
