Copper Flats: 20 Day Detailed Geological Mapping Program Commenced

Ord River Resources Limited (ASX: ORD) is pleased to announce that Mr. Rob Harley of Rangott Mineral Exploration flew to ORD's Copper Flats tenements in Western Australia on 27 July. Rob and his team are expected to carry out detailed mapping work for 20 days.

Geological Mapping Objectives

1. Geologically map previously defined Mapping Areas 1, 2 & 3 at 1:10,000. Allowance should be made for mapping parts of these areas at 1:5000. GPS-controlled mapping to be undertaken on enlargements of Mapinfo-registered 1:25,000 aerial photography rescanned at suitable resolution to allow enlargement to 1:5000 without pixilation.
2. Map Jackhammer A, Jackhammer B, Jackhammer C, Jackhammer West, Ripper and possibly Old Workings prospects at 1:1000 to provide better understanding of mineralisation controls/settings using existing drilling data and new surface mapping.
3. Investigate vehicle access options to all areas for both geological mapping and MLEM geophysical survey programmes.

The following map on page 2 shows the targeted areas for this mapping program which cover 21 square kms in total.

Managing Director Peter Shou said, "after some delay caused by unexpected bad weather in May we have now finally commenced our detailed mapping program. I want to thank the team for their hard work and patience. A successful mapping will be most valuable to the overall exploration program. It will give us a valuable set of geological information and analysis to find targets for drilling. It will also assist greatly our discussions with potential partners for Copper Flats. We are working hard to finalise plans and contractors for the EM Survey program. We look forward to update our shareholders and the market on the mapping program in the near future."
