Kipoi Copper Project – Production Update

Perth, Western Australia: Tiger Resources Limited (ASX/TSX code: TGS) (“Tiger” or “the Company”) is pleased to provide a production update from its high-grade Kipoi Copper Project in the Democratic Republic of Congo (DRC).

Tiger’s first stage of production, which utilises a heavy media separation (HMS) plant, is tracking well to reach its targeted throughput level of 75,000 tonnes per month.

MONTHLY PRODUCTION SUMMARY JUNE 2011			
		JUNE	UNAUDITED
Production Statistics		Forecast	Actual
Mining			
	Ore*	tonnes	
		104,300	107,800
Stockpiles			
	High grade Copper*	tonnes	
		75,000	197,000
	High grade Copper*	grade	
		6.45	6.95
Processing			
	Ore processed*	tonnes	
		37,500	44,557
	Ore processed Grade	% Cu	
		6.45	5.37
	Concentrate*	tonnes	
		5,511	7,053
	Recovery*	% Cu	
		55	63
	Copper in Concentrate produced	tonnes	
		1470	1,345
Sales			
	Copper Concentrate Sold	tonnes	
		5,850	4,496
* Bolded items indicates out performed Target for the month			

Tiger Resources Managing Director Brad Marwood said plant capability had now been proven.

“Throughput of ore-feed is in excess of the nameplate design capacity, 2,500 tonnes per day, and production is at expected recovery levels,” Mr Marwood said.

“We are very pleased to have regular daily sales of concentrate, more than a month of ore stockpiled and available for processing, and the plant operating and producing at expected levels.

“It is particularly satisfying that we have not had one serious accident since the commencement of development.”

BACKGROUND

The Kipoi Project covers an area of 55 square kms and is located 75km north-north-west of the city of Lubumbashi in the Katanga Province of the DRC. The project contains a 12km sequence of mineralised Roan sediments that host at least five known deposits: Kipoi Central, Kipoi North, Kileba, Judeira and Kaminafitwe.

The Company has reported JORC-standard resources at three of the deposits. The principal deposit is Kipoi Central which contains a zone of high grade copper mineralisation within a much larger lower grade global resource.

The Company proposes a staged development at the Kipoi Project. The high grade zone of mineralisation at Kipoi Central will be exploited during the Stage 1 development. During the three year operation of Stage 1 900,000tpa of 7% Cu is planned to be processed through a HMS plant to produce the equivalent of 35,000tpa of copper.

The Company is currently undertaking a feasibility study to evaluate the economic viability of constructing a SXEW plant (Stage 2) targeted to come on stream within three years of the start of the HMS operation. It is envisaged that ore from Kipoi Central, Kipoi North and Kileba South and the other deposits within the Kipoi Project and within the nearby Lupoto Project would be processed at the Stage 2 phase.
