KING ISLAND
SCHEELITE

APPOINTMENT OF CHIEF METALLURGIST FOR DOLPHIN PROJECT

King Island Scheelite Limited today announces the appointment of Alvin Johns to the position of Chief Metallurgist, effective 1st August 2011.

Alvin is an accomplished mining professional, who will be a valuable addition to the Dolphin Project team redeveloping the tungsten mine on King Island. His knowledge of this project and broad mining experience are essential as the project moves into its next development stage.

A qualified metallurgist, Alvin is well regarded by his peers and has been involved in commissioning a number of processing facilities around the world as well as in Tasmania. Currently working with the Hebei Hua Ao Mining Company in China, he has also worked with many major Australian engineering consulting firms.

Reporting directly to the CEO, Alvin will be responsible for all metallurgical aspects of the Dolphin Project. A critical component to the success of this Project is the high level of recoveries we expect to achieve by re-treating tailings and processing ore from the underground operation.

Assisted by our consulting metallurgist, Alvin will oversee the final metallurgical test work ahead of detailing the processing facility requirements for both tailings and underground ore. He will also actively manage the construction and commissioning phases of this processing facility.

Alvin will also work closely with the other consultants to the Dolphin Project, in particular GR Engineering who were recently appointed to assist with aspects of process plant engineering.
