

ASX QUARTERLY REPORT for the Period Ending – 31 March 2014

NEW PROJECTS

Emergent Resources Limited (EMG or the Company) has allocated part of its working capital budget to the identification and evaluation of new mineral resource opportunities in Australia and overseas. In this regard the Company during the quarter actively reviewed a number of projects across a range of commodities and countries and is confident of securing a project in the near term that will add significant shareholder value.

The Company considers that its combination of corporate and technical expertise, significant financial backing and cash reserves at a premium to its current market capitalisation makes it ideally placed to grow through investment and acquisition, particularly at a time when asset values have come back so sharply giving rise to a large number of attractively priced opportunities.

CONTINUED SOUND CASH POSITION

The Company's cash reserves at the end of March 2014 were \$2,583,000. The Company is in a very sound cash position to fund exploration on its existing projects and potential future projects.

BEYONDIE IRON ORE PROJECT

The Company carried out substantial work during the Quarter and previously on its Beyondie Iron Ore Project culminating in the release of a significant increase to the Inferred Mineral Resource on the Project.

The updated Beyondie resource modelling, undertaken by OreWin Pty Ltd (OreWin), an independent mining and resource consultancy, was based on information compiled by the Company's geologic consultant Peter Sheehan of Newport Mining Services. The updated Inferred Mineral Resource at Beyondie in accordance with JORC Code 2012 is set out in Table 1 and Figure 1. The revised Inferred Mineral Resources totals 714Mt at 27.4% Fe at relatively shallow depth, with low deleterious impurities of P, S and Al₂O₃.

The Inferred Mineral Resource is reported without a Fe cut-off grade, however drilling results are remarkably consistent within the wide Beyondie Magnetite Schist (BMS) units and a nominal 20% Fe was used to define the mineralised zones. Mineralisation occurs within magnetite schist in two main mineralised lodes (BMS1 and BMS2), and a third less substantial lode (BMS3), which all dip from between 40–55° to the north, with the average dip around 45° (Figure 2). The head grade chemistry of these lodes is generally consistent along the entire strike length.

The drillhole database included data from five drill campaigns, comprising a total of 91 reverse circulation (RC) drillholes and 30 diamond core (DD) drillholes. RC drill rigs were fitted with either a riffle splitter or cone splitter which produced a 3–5 kg sub-sample for every metre drilled for submission to the laboratory. DD was sampled by sawing in half lengthways, and then one half into quarter lengthways producing a 3–5 kg sub-sample for submission to the laboratory. Samples were sent to Spectrolab in Geraldton for analysis by X-Ray Fluorescence (XRF) for the elemental suite; Fe₂O₃, Al₂O₃, SiO₂, TiO₂, CaO, Mn, P, S, MgO, K₂O, and Na₂O.

Table 1 Statement of Inferred Mineral Resources – Head Grade Mineralisation (DOMAINS 1–3)

INFERRED RESOURCE ESTIMATE (Whole Rock Head Grades)										
Domain	Million Tonnes	Fe (%)	SiO ₂ (%)	P (%)	Al ₂ O ₃ (%)	CaO (%)	S (%)	MnO (%)	LOI (%)	Density
BMS 1	147	27.5	46.5	0.28	3.42	1.12	0.08	0.50	4.58	2.86
BMS 2	553	27.5	50.4	0.06	4.30	0.24	0.01	0.27	2.09	3.21
BMS 3	14	19.6	53.2	0.06	7.31	0.23	0.01	0.28	5.90	2.91
TOTAL	714	27.4	49.6	0.11	4.18	0.42	0.02	0.32	2.68	3.13

The database comprised 7,811 Fe% assay data and, new to the dataset, 558 Davis Tube Recovery (DTR) data with associated concentrate assays. Minimum drill spacing of 400 m x 100 m (between section and on section respectively) was required for material to be included as part of the Inferred Mineral Resource. A distance weighted method (ID²) was used for the estimation.

A revised Exploration Target adjacent to the Inferred Mineral Resource in the range 420-460 Mt at 26.5-28.0 % Fe in accordance with JORC Code 2012 is set out in Table 2 and Figure 1. The tonnage and grade ranges were estimated using the same data and method as set out above. While this drilling demonstrates the continued presence of the BMS units, and assay data confirms mineralisation, the holes are considered to be too widely spaced between section, or of insufficient depth on several sections to provide sufficient confidence in the geological interpretation to classify the mineralisation as Inferred Mineral Resource (khaki area in Figure 1). As such, the potential quantity and grade of the Exploration Target is conceptual in nature, there has been insufficient exploration to estimate a Mineral Resource, and it is uncertain if further exploration will result in the estimation of a Mineral Resource.

Infill drilling to 400m spacing with targeted deeper holes on several sections will test this target. At present, subject to funding, it is intended to carry out this work over the next 24 months.

Table 2 Statement of Exploration Target on E52/1806 – Head Grade Mineralisation (DOMAINs 1–3)

EXPLORATION TARGET ESTIMATE (Whole Rock Head Grades)										
Domain	Million Tonnes	Fe (%)	SiO ₂ (%)	P (%)	Al ₂ O ₃ (%)	CaO (%)	S (%)	MnO (%)	LOI (%)	Density
BMS 1	142	30.1	46.2	0.17	2.69	0.76	0.07	0.28	3.70	3.17
BMS 2	250	26.5	51.2	0.05	4.55	0.29	0.01	0.23	2.90	3.11
BMS 3	48	23.6	48.6	0.18	6.83	0.52	0.01	0.12	6.24	2.91
TOTAL	440	27.2	50.1	0.08	4.21	0.39	0.02	0.24	3.13	3.12

EXTENSION GOLD PROJECT

Following further review of the Extension Gold Project during the quarter, and as previously announced, the Company intends subsequent to the end of the quarter to conduct a targeted drilling program to test gold in soil Mobile Metal Ions (MMI) anomalies generated by previous exploration conducted on its Extension Gold Project. The gold anomalies are coincident with mineralisation intersected in previous drilling of a major shear zone close to a mafic-granite contact which is prospective for gold mineralisation.

Following preparatory works, the drilling program will comprise 800-1,000 metres of RC drilling, allowing the program to test structures at depth and across lithologies. The program will consist of 3 drilling sections to investigate the shear zone in the areas of highest MMI anomalism. Final planning for the holes is yet to be completed but it is expected that the first hole will target the up-dip expression of an 8m at 5.3g/t Au intercept in GCM hole MD5.

This information was prepared and first disclosed under the JORC Code 2004. It has not been updated since to comply with the JORC Code 2012 on the basis that the information has not materially changed since it was last reported.

TENEMENT SCHEDULES

The Company's interests in tenements is as follows:

Location	Project	Tenement No	Interest
Western Australia	Beyondie	E52/1806	80% (20% De Grey Mining Limited)
Western Australia	Beyondie	E52/2215	80% (20% De Grey Mining Limited)
Western Australia	Extension	E52/2259	100%

No tenements were acquired during the Quarter.

E52/2259 was reduced during the Quarter by way of partial surrender. 29 blocks were surrendered with the result that E52/2259 now comprises 28 blocks.

For personal use only

Information in this report that relates to Mineral Resources, Exploration Targets and Exploration Results is extracted from ASX announcement "Addendum Substantial Increase to Inferred Magnetite Resource" released on 19 February 2014 and is available on www.emergentresources.com.au. The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement and, in the case of estimates of Mineral Resources, that all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed. The Company confirms that the form and content in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Financial Reporting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
