ASX ANNOUNCEMENT
MOTOPIA'S ACCESS TO HTML5 MIGRATION SOLUTION

The past 12 months has seen the complete restructuring of MOTOPIA and its rebirth as a software company with world-class technology assets capable of empowering our customers to meet the demands of change as we move from an on-premise to a cloud computing world.

In previous announcements, we have advised of the success of cloud conversion BETA program. This program enabled us to gain valuable customer feedback that in turn has enabled the team to redefine our billing models and the current expanded needs of customers beyond just the Access to SQL solution.

Today, we are very pleased to announce the extension of the cloud platform and the incorporation of automated Access Software to HTML 5 (Web) software conversion. The Company has now commenced Beta testing HTML 5 (Web) software conversion solution which it has been developed over the last few months by CU2T, our 100% owned software development company.

Why is the launch of this technology exciting?

Alignment to Strategy

The company is committed to enabling Customers to migrate to the cloud. The cloud platform currently enables the hosted migration of Access data to SQL Server. The new Access to HTML5 engine will enable the rapid cloud migration of the Access Software to the web and the integration of this software with data in SQL Server.

Increase in Average / Job Revenue

Data migration (whether from Access, DB2 or Oracle) must be undertaken with 100% integrity in order to complete any modernisation project. However, the migration itself is usually less than 10% of the overall modernisation cost. The migration of custom systems and the delivery of technical services labour provides high margin, high value project revenues. MOTOPIA is now positioned to capitalise and target the other 90% of modernisation project revenues.

For personal use only

Utilization and Integration of other Asset Capabilities

The data migration platform with this new Access to HTML5 conversion capability enables data migration from many internationally recognized source systems. This development ties this capacity together and enables the delivery of rapid application developments services for sale to Customers.

The company has been building a pipeline of projects to capitalize on these developments and build sustainable revenues for MOTOPIA. The company will make further revenue-centric and strategic announcements in the near term as capacity to accurately forecast is determined.
