**Overview**

*Salt Lake Potash (SO4) plans to produce Sulphate of Potash (SOP) from salt lakes in Western Australia*

<table>
<thead>
<tr>
<th>Premium Product</th>
<th>SOP is a premium agricultural fertiliser, where supply cannot meet demand.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Low Cost, Organic</td>
<td>Salt lake brine projects are ORGANIC and have a massive cost advantage as they use solar evaporation.</td>
</tr>
</tbody>
</table>
| Australia’s Best Projects | SO4 has Australia’s best salt lake SOP projects:  
  - size and quality of resource – 85Mt of SOP with an average grade of 8.7 kg/m³ of \( K_2SO_4 \) at the Company’s flagship Lake Wells project  
  - resource recoverability – aquifers identified  
  - superior infrastructure setting |
| Excellent Economics | Excellent potential economics – low cost, high margin, very long life. |
| Right Team | Board and management with a track record of delivering for shareholders. |
| News Flow | Scoping Study underway and significant news flow expected. |
SOP is a Premium Agriculture Commodity

**ESSENTIAL MACRONUTRIENT**

Potash provides potassium which is an essential crop nutrient.

SOP also provides sulphur, the “fourth macronutrient”.

**HIGH VALUE**

Favoured by global demographic shift to high value specialty crops (including citrus, potatoes, beans, nuts, strawberries, mangoes, tomatoes, coffee, tobacco, spinach, peas etc.).

Environmentally friendly – no chloride contamination (K₂SO₄), low salt index and ORGANIC.

**SUPPLY CONSTRAINED**

Most countries, including Australia, are import dependent.

Most SOP comes from expensive secondary processing of MOP (KCl).

Salt lakes with the right chemistry are geologically scarce.

**PRICE**

SOP is the premium potash product.

SOP currently sells for a 50-100% premium to more common MOP.

Landing in Australia for A$1,000/t today.
Megatrends Underpinning Fertilizer Demand

**POPULATION**
By 2050 the world’s population will reach 9.1 billion, 34% higher than today. (UN Study)

**AGRICULTURAL PRODUCTIVITY**
Reduced arable land drives need for increased productivity

**CHANGING DIETS**
Urbanisation, higher incomes are driving diets towards higher valued crops

* kcal/person/day
SOP’s demand is driven by high value crops.

SOP contains 18% sulphur, the “fourth macronutrient”, especially important for oil crops.

**SOP Consumption**

- 30% for Treenuts
- 30% for Vegetables
- 15% for Fruits
- 25% for Tea, Tobacco, turf, etc.

**SOP for Enhanced Quality**

- Improves the **storage quality** of fruit and vegetables
- Improves the **colour**
- Increases the **resistance** of plants to drought
- Increases the **sugar content** of crops such as fruit, carrots, onions, and sweet potatoes.
- Makes plants more **frost resistant**
- Increases the **size**

Source: Compass Minerals
Value Drives Pricing Resilience

- SOP is preferred for chloride sensitive crops because muriate of potash (MOP) contains chloride.
- High value chloride sensitive crops have been immune to the downturn in major grains.

**Chloride sensitive crops outperforming**

![Graph showing chloride sensitive crops outperforming](Graph)

**SOP premium expanded**

![Graph showing SOP premium expanded](Graph)

Source: UN FOA Statistics

Source: Green Markets
Long term market potential for SOP is significantly higher than current supply constrained market (10-12Mt* versus current 5-6Mt).

* Greenmarkets/Bloomberg

SOP has the lowest salt index compared to other sources of K, such as MOP and NOP. Provides the solution to chloride build up in soils.

**Salt index of potash fertilisers**

- **MOP**: 116.3
- **NOP**: 73.6
- **SOP**: 46.1

Source: SOPIB

**Asia the largest potential market**

Salt Affected Soils by Region:

- Asia (including the Pacific and Australia): 49%
- Europe: 2%
- Latin America: 15%
- Middle East: 23%
- Africa: 10%
- North America: 1%

Source: UN FOA Statistics
Salt Lake Brine SOP has a Massive Cost Advantage

Solar evaporation does most of the work

- Salt lake SOP has been produced in:
  - USA (Utah) since the 1970s – around 350,000 tpa.
  - China since early 2000s – around 2,600,000 tpa (reaching peak production).

- Inland Australian evaporation rates are up to 3x higher than Utah.

- Average salt lake costs – US$200/t.
- Average Secondary costs – US$400/t.
SO4 has the Best SOP Projects in Australia

- Very large resource at Lake Wells – 85Mt of SOP in just the upper 52m.

- Open in almost all directions.

- Aquifers at surface AND at depth indicate potential for brine extractability.

- Easily the best location and infrastructure proposition *i.e. much lower costs.*

- Clear permitting pathway with no current Native Title claims and initial heritage clearance.

- Three other large lakes in the Northern Goldfields with potential for integration.
Very High Quality Resource at Lake Wells

- Three phases of drilling in 12 months:
  - shallow core drilling;
  - deeper air core; and
  - deeper core drilling currently underway.

- High quality data including geology, porosity and wide-spread brine sampling.

- Excellent and consistent brine chemistry across the resource.

</table>

* Using Porosity of 0.30 for the Fractured Siltstone Aquifer
Resource Expansion Likely

Resource limited to Lake edge at the moment.

Open at depth in most holes.

Testing the Fractured Siltstone Aquifer for porosity will allow higher resource category.
Geological Outcomes Indicate Potential Brine Extractability

Porosity (brine content) does not equal permeability (brine flow). It is critically important to have permeable zones to recover brines. Brine extraction rates will determine production capacity.
Best Infrastructure for SOP in Australia

SO4’s Projects have the best location/infrastructure in Australia

- Goldfields Highway
- Great Central Road
- Goldfields Gas Pipeline
- Malcolm Railhead
- Lake Wells
- Lake Irwin
- Lake Minigwal
- Lake Ballard
Established Production and Process Route

Brine Extraction → Solar Evaporation → Harvest of Potassium Salts

- To Evaporation Ponds
- Lake
- Borehole
- Brine Aquifer
- Brine Extraction
- Solar Evaporation
- SOP Dried, Screened & Sized
- Schoenite Separated by Flotation & SOP Crystallisation
- SOP to Market
- SOP to Market

Process chart for illustration purposes only. No images are of Salt Lake Potash Limited’s property or operations.
Potential for Superior Margins/Returns

Prices to remain high
Current SOP Price ~A$1,000 tonne.

Capex low
- Capital Intensity lower than alternative projects.
- Reward forecasting capex of US$256m for 400k tpa at Lake Disappointment, including US$45m for roads + US$57m for infrastructure.
- Average Capex of other large potash project developers > US$1,000/tonne.

Opex very low for brine projects
- Average opex approx. $200-250/t, half that of secondary production.

Disclaimer Notice

The material in this presentation (‘material’) is not and does not constitute an offer, invitation or recommendation to subscribe for, or purchase any security in Salt Lake Potash Ltd (‘SLP’) nor does it form the basis of any contract or commitment. SLP makes no representation or warranty, express or implied, as to the accuracy, reliability or completeness of this material. SLP, its directors, employees, agents and consultants shall have no liability, including liability to any person by reason of negligence or negligent misstatement, for any statements, opinions, information or matters, express or implied, arising out of, contained in or derived from, or for any omissions from this material except liability under statute that cannot be excluded.

Statements contained in this material, particularly those regarding possible or assumed future performance, costs, dividends, production levels or rates, prices, resources, reserves or potential growth of SLP, industry growth or other trend projections are, or may be, forward looking statements. Such statements relate to future events and expectations and, as such, involve known and unknown risks and uncertainties. Actual results and developments may differ materially from those expressed or implied by these forward looking statements depending on a variety of factors.

Forward Looking Statements

Some of the statements contained in this presentation are forward looking statements. Forward looking statements include but are not limited to, statements concerning plans for its mineral projects, exploration and development activities, development plans and timing, development and operating costs, and other statements which are not historical facts. When used in this presentation, and in other published information of SLP, the words such as “aim”, “could”, “estimate”, “expect”, “intend”, “may”, “potential”, “should” and similar expressions are forward-looking statements.

Although SLP believes that its expectations reflected in the forward-looking statements are reasonable, such statements involve risk and uncertainties and no assurance can be given that actual results will be consistent with these forward-looking statements. Various factors could cause actual results to differ from these forward looking statements include the potential that SLP’s projects may experience technical, geological, metallurgical and mechanical problems, changes in mineral product prices and other risks not anticipated by SLP.

Competent Persons Statement

The information in this presentation that relates to Mineral Resources for Lake Wells, is extracted from the reports entitled ‘Lake Wells Resource Increased By 193 Percent to 85Mt of SOP’ dated 22 February 2016 and ‘Significant Maiden SOP Resource of 29Mt at Lake Wells’ dated 11 November 2015 and is available to view on the Company’s website www.saltlakepotash.com.au. The information in the original ASX Announcement that related to Exploration Results for Lake Wells based on information compiled by Mr Ben Jeucken, who is a member Australian Institute of Mining and Metallurgy. Mr Jeucken is employed by Groundwater Science Pty Ltd, an independent consulting company. Mr Jeucken has sufficient experience, which is relevant to the style of mineralisation and type of deposit under consideration and to the activity, which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the ‘Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves’. Mr Jeucken consents to the inclusion in the report of the matters based on his information in the form and context in which it appears. The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement. The Company confirms that the form and context in which the Competent Person’s findings are presented have not been materially modified from the original market announcement.

The information in this presentation that relates to Exploration Results for Lake Wells, is extracted from the reports entitled ‘Aircore Drilling Confirms Deeper Potential At Lake Wells’ dated 23 November 2015, ‘Successful Shallow Core Drilling Completed at Lake Wells’ dated 22 September 2015 and ‘Wildhorse Acquires Two Large Scale High Grade Sulphate Of Potash Brine Projects’ dated 9 April 2015 and is available to view on the Company’s website www.saltlakepotash.com.au. The information in the original ASX Announcement that related to Exploration Results for Lake Wells based on information compiled by Mr Ben Jeucken, who is a member Australian Institute of Mining and Metallurgy. Mr Jeucken is employed by Groundwater Science Pty Ltd, an independent consulting company. Mr Jeucken has sufficient experience, which is relevant to the style of mineralisation and type of deposit under consideration and to the activity, which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the ‘Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves’.
