

# WARRO UPDATE

29 March 2016

**Warro-5 undergoing pressure built-up**  
**Warro-6 sampling and logging underway**  
**Warro-4 ready to proceed once approved**

Transerv Energy (ASX: TSV) is pleased to announce that both Warro-5 and 6 continued to flow naturally during the past week prior to preparing for sampling and logging operations. Equipment is ready to move to Warro-4 to recommence testing as soon as approvals are received

### Warro-5 and 6

Warro-5 gas flow rate, prior to shut-in, was averaging 0.4 mmcf/d with an accompanying water rate of 165 bwpd. The well is presently gathering pressure build-up information.

Warro-6 gas flow rate is presently averaging 0.5 mmcf/d with an accompanying water rate of 190 bwpd. Following fluid sampling a production log (PLT) will be run.

The information from the PLT will be combined with the log, tracer and fracture stimulation data to determine the expected flow potential of the reservoir sections.

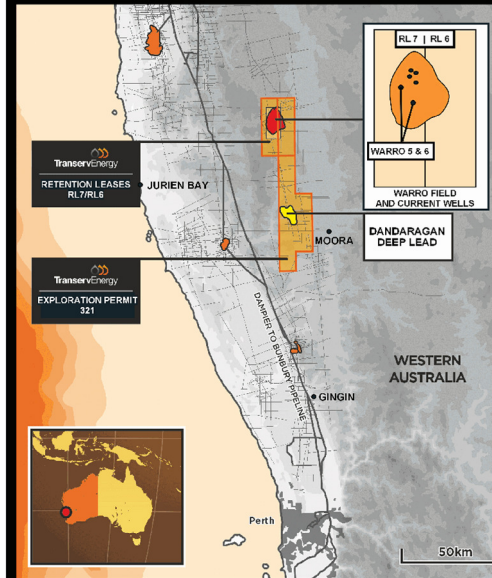

### Warro-4 Retesting

The planning for retesting of Warro-4 is well advanced and we await Government approvals before proceeding. The re-testing of Warro-4 is expected to be underway in the second half of April.

For and on behalf of the Board.

STEPHEN KEENIHAN  
Managing Director

Permit	RL-7
Well Location – Warro-5	30°12'24.55"S, 115°43'43.44"E
Well Location – Warro-6	30°10'53.70"S, 115°43'08.57"E
Transerv Energy's Interest	56%
Field Name	Warro Gas Field
Depth to Reservoir	~4100m RT
Geological Formation	Yarragadee Sandstone
