## Drilling Update

– For Immediate Release –

### HIGHLIGHTS

- **Maiden drill programme due for completion by week's end**
- **First assay results due mid-next week**

Dakota Minerals Limited (“Dakota”, “DKO” or “the Company”) is pleased to announce that the maiden drill programme for the Company’s Lynas Find project has gone according to schedule and is due for completion by the end of the week.

The programme is likely to total around 2,000m of the 3,000m planned; this is due to a much shallower dip of the pegmatite than interpreted – around -15 degrees rather than the -35 degrees as predicted thus requiring much shallower test holes.

The first batch of assay results are expected to be available by mid-next week and will be reported as soon as the Company has interpreted them and compiled the necessary geological context.
