GREENPOWER SECURES ADDITIONAL POTASH BLOCK

Greenpower Energy Limited ("Greenpower" or "Company") has been advised by the Northern Territory government that its subsidiary Northern Exploration Pty Ltd is the successful applicant of Exploration License (EL) 31496

EL 31496 is a similar sized block to the existing areas held by the Company in the Northern Territory. A location map illustrating EL 31496 which has been highlighted in red is as follows:

Greenpower Chairman, Gerard King:

"Greenpower has been particularly encouraged with the early data received thus far from its on ground exploration activities at its 100% controlled Hypersaline Brine Project.

Whilst the early data being received is preliminary in nature and is still being reviewed the Board has opted to promptly secure the rights to the adjacent north-east project area which it considers will be prospective for Sulphate of Potash due to the results generated by the Companies geological model to date and confirmed saline aquifers intersected by the Chanin-1 well."

ENDS
