DGR Global (ASX: DGR)
- The company remains focussed on new project generation (see later sections) and reviewing investment opportunities. DGR has announced the terms of loans made available to Armour Energy and Dark Horse Resources.

Armour Energy Ltd (ASX: AJQ) - DGR 23.25%, 75m shares
- Holds highly prospective whole basin oil and gas positions in Northern Territory and North West Qld covering 139,000 km², and a track record of exploration success.
- Acquired the petroleum resources, tenures, and production and transportation infrastructure of the former Origin Energy and Santos assets on the Roma Shelf (Kincora Project), with production of oil from the Emu Apple Well resumed.\(^1\)
- Announces a 510% increase in 2C Contingent Resources at the Kincora Project\(^3\).
- Welcomes M.H. Carnegie as a cornerstone investor in a progressive $40 million capital raising (Convertible Notes and Rights issue) to fully develop the Kincora Project\(^4\).
- Executes initial gas sales agreement with Australian Pacific LPG and pipeline connection agreement with APA Group to underpin restart at Kincora\(^5,6\).
- Wholly owned subsidiary Ripple Resources Pty Ltd emerges as a highly prospective lead-zinc explorer with over 20,000 km² under application or tenure in Northern Australia.

SolGold plc (LSE: SOLG) – DGR 14.48%, 207.3m shares
- Focus on high grade world class copper gold porphyry system at Cascabel in Ecuador. Cascabel is close to the capital and ports, is at low elevation, and has adequate water supplies and access to power.
- Assay results from 20 drill holes to date confirm discovery of a large scale, high grade porphyry system at the Alpala Prospect. Further significant long high grade drill intersections were announced to the London Stock Exchange during the last quarter and can be viewed on the LSE or SolGold company website. Hole 12 returned the longest and highest grade intercepts to date\(^7\).
- Strong copper gold surface mineralisation discovered at the Aguinaga and Trivino Prospects\(^8\), with Cascabel’s true potential beginning to emerge with 14 porphyry targets identified to date, seven of which are close to drill ready status\(^9\).
- Substantial treasury (USD 35 million) built to accelerate drilling and exploration after capital raisings that brought significant new shareholders Maxit Capital (Canada) and Newcrest (10%) on to the register\(^10\).
- New drilling contracts signed to underpin aggressive four year exploration program.

---

**DGR Share Price versus Net Tangible Assets**

For personal use only

---

**For personal use only**
IronRidge Resources Ltd (LSE: IRR) – DGR 26.15% 62.3m shares
• Highly prospective hematite rich iron targets evident in Tchibanga and Belinga Sud licence areas in Gabon – total tenure 5,400 km². Tchibanga is less than 70 km from the port of Mayumba.
• Wholly owned subsidiary Eastern Exploration Pty Ltd discovers high grade Direct Shipping Ore (DSO) bauxite mineralisation at the Monogorilby project in Queensland, Australia and announces JORC compliant inferred maiden resource estimate11.
• Initial drilling program at the May Queen gold prospect near Monogorilby confirms historical data and delivers multiple significant gold intersections12.
• Right to acquire 60% of Tekton Minerals Pte. Ltd which has exclusive rights to an extensive land package and associated major new gold discovery in Chad, Central Africa13.
• Secured highly prospective lithium tenements (and rights to acquire historic lithium resource) in Ghana, West Africa14 and added right to acquire highly prospective primary “hard rock” lithium exploration license in Ivory Coast, West Africa15.
• Additional highly prospective lithium tenement secured adjacent to lithium tenements already held in Ghana16.
• Gains access to highly prospective gold portfolio (six tenements) in Ivory Coast, and adds a further 3 tenements to the package at the end of the quarter17.
• 100% owned local subsidiary secures 3 highly prospective lithium pegmatite exploration permits in Ivory Coast18.

Dark Horse Resources Ltd (ASX: DHR) – DGR 13.04% 113.5m shares
• Significant advancement of the highly prospective Nirihuau Coal Project in Rio Negro province in Argentina (DHR earning up to 75%).
• Progressing the development of a thermal power station at Nirihuau to supply low-cost base-load power to the Rio Negro region and into the main Argentinian electricity supply network19.
• Plans for low cost coal production and sale to local industries within the San Juan province in Argentina (Marayes Coal Project).
• Expanded the company Argentinian focus with the acquisition of Oronegro SA, with exclusive rights to explore for lithium and other strategic minerals in San Luis and Cordoba provinces. Subsequently Oronegro enters an exclusive agreement to acquire the Las Tapias Mine, the principal historic spodumene mine in Argentina20.

Aus Tin Mining Limited (ASX: ANW) – DGR 21.77% 360.8m shares
• Completed sale of subsidiary NavGas Pty Ltd (includes 6 PELAs in South Australia and ATP 1183 on the Roma Shelf in Qld.) to Lakes Oil NL (LKO) for shares in LKO to the equivalent of $20M. Dark Horse emerges as the holder of over 40% of LKO21.
• Enters Exclusive Agreement to acquire 85% of the Los Domos Gold Project in Santa Cruz province, Argentina which hosts a number of world class, multi-million-ounce gold deposits (including Cerro Negro and Cerro Vanguardia)22.

Highlights
• Expanded the company Argentinian focus with the acquisition of Oronegro SA, with exclusive rights to explore for lithium and other strategic minerals in San Luis and Cordoba provinces. Subsequently Oronegro enters an exclusive agreement to acquire the Las Tapias Mine, the principal historic spodumene mine in Argentina20.

NEW OPPORTUNITIES:
Coolgarra Minerals | 100% DGR owned
• 2 Exploration Permits (EPMs) and 3 EPM applications for gold, nickel, cobalt and antimony in North Queensland

Pinnacle Gold | 94% DGR owned
• 6 EPMs for gold (5 near Charters Towers) have now been granted.

Albatross Bauxite | 100% DGR owned
• Wholly owned subsidiary, with 4 granted EPMs for bauxite in southern Queensland.

Footnotes: see page 9.

DGR GLOBAL CREATES RESOURCE COMPANIES

DGR Global’s business is the creation of resource exploration development and mining companies. The business uses the skills of a core team of talented geoscientists to identify resource projects capable of yielding world class discoveries of attractive commodities.

This is achieved through:

-The identification of commodities with a favourable 20-year demand, growth and price outlook

-Geological terranes with:
  • A demonstrated strong endowment for that commodity
  • An under-explored history
  • Opportunity for the application of recently developed exploration and metallurgy techniques to define economic resources
  • Jurisdictions with improving socio-economic and regulatory frameworks
  • Extensive available tenures
  • Existing data sets which provide the basis for novel reinterpretation
DGR Global provides initial seed funding and management support to secure these assets in subsidiaries and develop these assets to more advanced funding stages. The Company has a pipeline of projects in daughter companies at various stages of emergence, and in 2015 crystallised a significant return through the sale of its 15% holding in Orbis Gold for $26 Million.

Further development of its holdings in AIM listed SolGold and IronRidge Resources and ASX listed Aus Tin Mining, Dark Horse Resources and Armour Energy and unlisted Archer Resources are expected over the coming years.

DGR Global has commenced an intended program of judicious dividend payments to its shareholders. The future of the dividend program will depend on circumstances from time to time.

The previous resource exploration and funding activities of DGR’s key personnel underscore the opportunities provided by the DGR business model. DGR Global does not purchase its exploration projects. DGR’s in house generative capabilities gives the Company a strong competitive edge.

DGR’s focus on provincial tenement positions covering entire sedimentary basins or structural blocks where possible, delivers capital, government and major resource corporate attention.

DGR Global holds key equity positions in its subsidiary companies after listing. As shown in the DGR Global Group Corporate Structure (see Figure 1) at 31 March 2017, DGR Global holds:
- 23.25% Armour Energy Ltd (ASX: AJQ),
- 14.48% SolGold Plc (LSE:SOLG),
- 26.15% IronRidge Resources Ltd (LSE: IRR),
- 21.77% Aus Tin Mining Ltd (ASX: ANW),
- 13.04% Dark Horse Resources (ASX: DHR).

Figure 2 demonstrates how DGR Global continues to build value for shareholders.
Archer is focused on the discovery and development of copper, gold, nickel, cobalt and zinc deposits in Eastern Queensland. The company holds a portfolio of 5 very prospective exploration project areas and early-stage resources with huge upside potential. The five project areas (shown in Figure 3) contain at least 15 prospects, with several drill ready targets. The Mt Abbot Project area (see Figure 4) holds several walk up targets including Stockyard Creek, The Springs and Euri Creek. The Calgoa Project area (see Figure 5) has high-grade porphyry style mineralisation evident in historic workings within a large alteration zone of > 40 km².

Archer and DGR geoscientists have reviewed all the historical drill data for the Ban Ban Zinc Deposit (held on MDL 409). The tenement has an orebody that has historically been deemed too small to be economic. For the first time the historic drilling data has been modelled in 3D and has revealed significant areas where little is known, and confirms that the deposit may be open to the north but most certainly is open at depth.
This is clearly evident in the long section shown in Figure 6. Based on 3D modelling of the historical drill data the company has internally generated an exploration target of approximately 2 million tonnes to approximately 5 million tonnes grading approximately 7% zinc to approximately 10% zinc and approximately 8 g/t silver to approximately 10 g/t silver. It should be noted that the potential grade and tonnage is conceptual in nature, that there has been insufficient exploration to estimate a Mineral Resource, and that it is uncertain if future exploration drilling will result in the estimation of an economic Mineral Resource.

The Company is planning an exploration program to prove up the target over the next 12 months. Archer Resources has commenced a seed raising to raise $1.5m by the issue of 30 million shares @ 5 cents per share. A significant portion of the funds raised will be used in a new drilling program at Ban Ban with the aim of delivering a JORC compliant resource within 12 months. Funds will also be spent to advance exploration at key project areas such as Mt. Abbot, Calgoa, Three Sisters, Gayndah and Pinnacle. Initial review will also be commenced on new tenements at Great Blackall and Hawkwood. Sophisticated Investors interested in participating in the Archer Resources seed raising can contact the Company Secretary for further information.

**Ban Ban Zinc Deposit, Biggenden QLD**

Figure 6: Long section showing kriging interpolation for 1%, 2%, 4% and 7% Zinc, modelled in 3D Software.
As shown in Figure 7, Pinnacle Gold has now secured substantial and extensive gold exploration tenements south of Charters Towers, Qld. Most of the area is soil covered, with previous exploration efforts by earlier explorers largely confined to areas of outcrop and focused on mapping and sampling known workings. Only two areas have been drilled.

No one has ever done a systematic geochemical survey yet the area clearly lies on potentially mineralising structures (Charters Towers – Black Jack – Mt Leyshon). It would appear that earlier explorers have been distracted by small high grade gold bearing quartz veins with no size potential. Significant steam anomalism (see Figure 8) may not all be due to “noise” from small veins.

After reviewing the historical exploration programs Pinnacle considers it is time to re-think how to explore this mostly soil covered area. Looking for large targets, Pinnacle will commence a field program of low gold detection limit soil lines on a grid pattern with infill gridding of any elevated results. Also, further investigation will be undertaken of some identified areas of high gold stream sediment geochemistry that have had limited follow up.

Figure 7: Pinnacle Gold Exploration Holdings south of Charters Towers, QLD

Figure 8: Overview of gold stream sediment geochemistry south of Charters Towers (compiled from historical data)
Coolgarra Minerals holds 2 granted EPMs and 2 EPM applications south of Greenvale, Qld and one EPM application west of Theodore in Central Queensland as shown in Figure 9.

As announced to the ASX on 9 February, Coolgarra has identified several strong gold and cobalt targets during recent field work. The initial exploration program was focused around several historical small scale mining areas, in particular Wally’s Hope and Janelle’s Hope Prospects in the southern section of EPM 19270, and what is recorded as a long (several kilometres) stratiform gold occurrence in the northern section now referred to as Wade’s Prospect.

Figure 9 is a satellite image of the southern section of EPM 19270 showing the soil grid lines, where each red diamond indicates a soil sample taken and assayed. A macro overview of the soil gold concentrations is evident by plotting the soil gold contours at >25 ppb (parts per billion), > 50 ppb, and > 100 ppb.

A highlight was a one metre wide surface exposure of non-veined sediments on the western side of the Wally’s Hope Prospect assaying 40.3 g/t gold (see Figure 11). The Wally’s Hope Prospect clearly presents several walk up gold drill targets which are accessible from existing tracks on the EPM. As evident from the underlying geology, the gold would seem to occur mainly as disseminations in calcareous sediments, and over several kilometres. The potential therefore exists for a large scale gold discovery.

Figure 12 shows an overview of the northern section of EPM 19270 on magnetic imagery. Again, the red diamonds indicates a soil sample taken and assayed. Stream sediments were also taken for cobalt, and several rock chip samples are shown by the blue dots. Coolgarra Minerals has an untested application for an exploration permit over the northern extension of the Wade’s Prospect where historical data suggests the gold mineralization continues stratiform for several kilometres beyond the recent exploration.
Albatross Bauxite is a wholly owned subsidiary of DGR Global Ltd, formed in 2011 with the purpose of exploring and acquiring bauxite resources for export. Albatross' initial efforts were focussed in Cape York Peninsula (near Albatross Bay).

Since the recent discoveries of high quality bauxite in southern Queensland, and as a result of familiarity with SE Queensland geology, Albatross has applied for exploration rights over known bauxite occurrences and prospective laterite terrains.

Albatross Bauxite now holds 4 granted EPMs in south east Central Qld, all prospective for bauxite (see Figure 13). EPM 25976 and EPM 25977 are located close to the Port of Bundaberg for potential export of bauxite to overseas markets. A field exploration program for these two EPMs is currently underway.

As revealed at the Wally's Hope Prospect much further south, the soil sampling indicates that the gold occurs as disseminations within calcareous sediments.

The highest gold in soil recorded was 1.1 ppm, or 1.1 g/t. The company considers this to indicate "Carlin" style potential. Quartz veins did not return gold values over 0.3 g/t. Wade's Prospect has equally demonstrated that it is highly prospective for cobalt. The soil sampling revealed extensive cobalt mineralization, with a maximum soil result of 0.13% Co.

To the north of the cobalt mineralized area revealed by the soil sampling, rock chip sampling of asbolite float assayed 1.1% Co, 0.13% Cu and 0.54% Ni.

As with the Wally's Hope Prospect further south on EPM 19270, Wade's Prospect clearly presents several walk up drill targets for gold and cobalt. DGR Global will now consider the forward exploration program and options for funding an initial drill campaign later in the year.

Exploration and Mining Tenements

DGR Global interests in mining and exploration tenements at the end of the Quarter are as shown in the attached Appendix.

Competent Persons Statement

The information in this report that relates to Exploration Results and Exploration Targets is based on information compiled by Nicholas Mather B.Sc (Hons) Geol., who is a Member of the Australian Institute of Mining and Metallurgy. Mr Mather is employed by Samuel Holdings Pty Ltd which provides certain consultancy services including the provision of Mr Mather as the Managing Director of DGR Global Ltd and a Director of its subsidiaries and associates. Mr Mather has sufficient experience which is relevant to the style of mineralisation and type of deposit being reported and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (the JORC Code). Mr Mather has consented in writing to the inclusion in this report of the matters based on information in the form and context in which it appears.
