KIATA WIND FARM CONSTRUCTION COMPLETED, CONNECTED TO GRID AND GENERATING POWER

Windlab Limited (ASX: WND) today announced that the 31MW Kiata Wind Farm in western Victoria has completed construction, been connected to the electricity network and is producing both electricity and large scale generating certificates (LGCs). The project will finalise commissioning and performance testing in coming weeks, in advance of its scheduled commercial operation date at the beginning of December.

Kiata is located near Nhill, using Vestas V126, 3.45MW wind turbines at a hub height of 117M. It is the first project supported by the Victorian Government's LGC procurement scheme to be connected to the grid.

Windlab holds a 5+5-year asset management agreement with Kiata Wind Farm Pty Ltd. Under this agreement Windlab is responsible for construction oversight and the provision of owners' engineering services as well as ongoing management of the operating facility. The project has been constructed on schedule and well within budget.

Windlab owns 25% of Kiata and will receive its share of early generation revenues as well as project distributions once the project is in full commercial operations.

"Following the on-time and under budget construction of Coonoer Bridge Wind farm in 2016, we very pleased to maintain the standard and repeat the performance on Kiata in 2017." stated Roger Price, Executive Chairman and CEO of Windlab Limited. "We look forward to the project achieving full commercial operations before the end of the year."
