WANGLE FAMILY INSITES RELEASES
SCREEN TIME MANAGEMENT FEATURE

Wangle Technologies Limited (**Wangle** or the **Company**) (**ASX:WGL**) is pleased to announce the release of important new features for its parental control software suite, Wangle Family Insites (**WFI**), including the ability for parents to better manage their children's screen time.

WFI Release Summary

- WFI's new "Scheduling" feature to allow parents to set time-based limitations to their children's internet access
- Major update to the setup and configuration process to help easier installation of WFI on devices
- Changes to the subscription process to increase download to subscription conversions of WFI
- Major performance upgrades to the Wangle VPN layer to enable quicker connections and improved stability of network
- Support for iPhone X devices

Wangle Family Insites "Scheduling" Feature

The potential behavioural and developmental impact of late night internet use on young people's sleep habits as well as the challenges of general excessive screen time has led to the development of WFI's new "Scheduling" feature. The Scheduling functionality gives parents the ability to easily set defined time periods that the internet will be available on children's devices, with the WFI network prohibiting access outside of those allowed times.

The new feature is a significant addition to WFI and has been added based on feedback from parents on what their biggest challenges are with day to day device management.

Improvements to Setup and Configuration Process

Early metrics on the use of WFI identified that parents found the setup and configuration of WFI challenging. Significant changes have been made to the setup process to streamline and simplify the pathway to free trial and ultimately subscription, including shifting the commitment to a subscription from the start to the end of the free trial period. The implemented changes are expected to significantly improve the download to free trial to subscription ratio.

Wangle VPN Performance Upgrades

The underlying Wangle VPN network has undergone a substantial range of upgrades leading to significant performance improvements for iOS and Android users, with testing showing speed improvements of up to 27%. Updates to the VPN tunnel include improved network switching capability which allows faster network response to outages.

Additional changes to the VPN network configuration have been undertaken to allow better management of network capacity on demand, allowing faster reductions or increases in capacity as required and facilitating a substantial reduction in operating costs of the network.

Wangle Family Insites support for iPhone X

The iOS release adds additional customisation and support for the advanced hardware capabilities and improved display layout of iPhone X devices.

Wangle CEO Mr Sean Smith said:

"This release is a significant step forward for Wangle Family Insites. Managing screen time has emerged as one of the key challenges for parents in their day to day management of their children's time online. Introducing the Scheduling feature gives parents the help they have requested to address this challenge, and the improved performance of our underlying network enhances the overall experience for both children and parents."

WFI is available with a free 30 day trial via the Apple and Android App stores on a monthly or annual family subscription, and will initially target Australia's 6 million families before a planned international expansion.

- ENDS -

ABOUT WANGLE FAMILY INSITES

Wangle Family Insites (WFI) offers parents a unique approach to ensuring the safe use of the internet by children and teenagers. By utilising Wangle's world class VPN network, backed by the research insights of childhood development research organization Telethon Kids Institute, WFI monitors mobile network patterns in real time and advises parents of potential threats as well as providing greater details and resources to parents on the threats identified.

ABOUT WANGLE TECHNOLOGIES

Wangle Technologies has developed patented algorithms that not only optimise, compress and secure the data flow to mobile devices, but facilitate real time analysis of network patterns and usage behaviours. Wangle's technology provides compelling value to consumers, service providers and enterprises looking for innovative low cost solutions for managing network capacity and use.
