

Mobilicom executes successful proof of concept with Czech Republic police

- **Successful proof of concept (POC) field trial with police departments in Czech Republic**
- **Mobilicom's MCU-30 and MCU-200 units integrated shortly after releasing new MESH solution for underground operations**
- **Mobilicom is negotiating a planned national deployment**

12 June 2018 - Mobilicom is pleased to announce a successful proof of concept (POC) field trial with the Czech police departments.

In the field trial, Mobilicom's MCU-30 and MCU-200 units were embedded into police vests and ground stations, allowing the system to demonstrate its ability to create a fully synchronised communication system that enables underground operations without the need for a GPS.

The trial used Mobilicom's recently launched Mobile MESH Network Solution for underground operations, addressing one of the key challenges of the police forces worldwide: operating a fully synchronised system inside buildings and underground without a GPS.

The successful POC field trial in the Czech Republic demonstrated how security and rescue forces can effectively handle emergency events working inside buildings and underground using a light and compact unit in their vest.

This is the second POC field trial Mobilicom has executed in the Czech Republic this year with Mobilicom Communication Units (MCUs).

Mobilicom is now in negotiation with the system integrator for the Czech Republic police with a view to being engaged for a national deployment of MCUs.

Mobilicom's CEO Oren Elkayam said: *"With a successful second POC field trial, Mobilicom is now in a good position to win a national deployment in the Czech Republic and offer the local police a private and secured 4G Mobile MESH Network for all operations and applications".*

"We are proud to meet our customers' advanced requests and needs, which reinforces Mobilicom's position as a leading provider of Mobile Mesh communications technology."

About Mobilicom

Mobilicom is a high-tech company that designs, develops and markets solutions for mission critical and remote mobile private communication networks without the need for, or use of, any existing infrastructure. Mobilicom's products and technology are based on an innovative approach that merges 4G communication with Mobile MESH technologies into a unified solution, with a number of product families that have been commercially deployed. Mobilicom develops in-house and fully owns all assets for its unique technology and solutions, including: 4G modem, MESH networking, radios, HW & SW applications, among others. The technology is backed by its patent holding and know-how.
