Xref and JobAdder Launch Platform Integration

Xref Limited (ASX:XF1), the human resources technology company, has launched its latest platform integration with recruitment software provider, [JobAdder](#).

Headquartered in Sydney, and with offices in the US and the UK, JobAdder has 10,000 users across 45 countries. It is the world's only applicant tracking system¹ to have both job posting and applicant tracking built into its core product, offering users a faster time-to-hire and reducing the required hiring budget and resources.

The markets JobAdder currently operates in complement the international growth of Xref to date and each company will benefit mutually from the extended market opportunity posed by the partnership.

The integration will allow JobAdder users to move directly to the Xref reference checking process from the JobAdder platform. This removes the need to manually input data and swap between providers, thus streamlining the recruitment process.

This partnership continues Xref's channel growth strategy, focused on integrating with leading applicant tracking systems and HR technology solutions. The Company now has 13 live integrations in place, contributing significantly to cost-effective client acquisition.

"As existing users of both Jobadder and Xref, the LeasePlan recruitment team is very familiar with the ease and value both solutions add to the recruitment process. The integration of the two platforms will add even greater value by creating further time and visibility efficiencies." **Juliette Feunteun, Talent and Reward Manager, LeasePlan Australia & New Zealand**

More information about the integration can be found on the JobAdder marketplace: <https://jobadder.com/marketplace/xref>

Executive Director / CEO Lee-Martin Seymour said: "JobAdder was a natural choice of integration partner for us, given the company's Australian background and its growth story to date. The ease and speed it offers users complements the service we deliver and supports our drive to continually increase the value we offer customers globally."

Xref's software as a service (SaaS) platform collects 60% more data, five times faster than traditional methods and, by automating a vital task, protects companies from fraud, discrimination and privacy breaches.
