ANNUAL GENERAL MEETING

23 NOVEMBER 2018

DISCLAIMER

This investor presentation (Presentation) has been prepared by Orocobre Limited (the Company or Orocobre). It contains general information about the Company as at the date of this Presentation.

The information in this Presentation should not be considered to be comprehensive or to comprise all of the material which a shareholder or potential investor in the Company may require in order to determine whether to deal in shares. The information in this Presentation is of a general nature only and does not purport to be complete.

This Presentation does not take into account the financial situation, investment objectives, tax situation or particular needs of any person and nothing contained in this Presentation constitutes investment, legal, tax or other advice, nor does it contain all the information which would be required in a disclosure document or prospectus prepared in accordance with the requirements of the Corporations Act. Readers or recipients of this Presentation should, before making any decisions in relation to their investment or potential investment in the Company, consider the appropriateness of the information having regard to their own objectives and financial situation and seek their own professional investment, legal and taxation advice appropriate to their particular circumstances.

This Presentation is for information purposes only and does not constitute or form part of any offer, invitation, solicitation or recommendation to acquire, purchase, subscribe for, sell or otherwise dispose of, or issue, any entitlements, shares or any other financial product. Further, this Presentation does not constitute financial product or investment advice (nor tax, accounting or legal advice), nor shall it or any part of it or the fact of its distribution form the basis of, or be relied on in connection with, any contract or investment decision.

The distribution of this Presentation in other jurisdictions outside Australia may also be restricted by law and any restrictions should be observed. Any failure to comply with such restrictions may constitute a violation of applicable securities laws.

Certain statements in this Presentation are forward-looking statements. You can identify these statements by the fact that they use words such as “anticipate”, “estimate”, “expect”, “project”, “intend”, “plan”, “believe”, “target”, “may”, “assume”, “should”, “could”, “predict”, “propose”, “forecast”, “outlook” and words of similar import. Indications of, and guidance on, future earnings and financial position and performance are also forward-looking statements. Forward-looking information may include, but is not limited to, the successful ramp-up of the Olaroz Project, and the timing thereof; the design production rate for lithium carbonate at the Olaroz Project; impacts of weather and climatic conditions, the expected brine grade at the Olaroz Project; the Olaroz Project’s future financial and operating performance, including production, rates of return, operating costs, capital costs and cash flows; the comparison of such expected costs to expected global operating costs; the ongoing working relationship between Orocobre and the Provinces of Jujuy and Salta in Argentina; the on-going working relationship between Orocobre and the Olaroz Project’s financiers, being Mizuho Bank and JOGMEC and the satisfaction of lending covenants; the future financial and operating performance of the Company, its affiliates and related bodies corporate, including Borax Argentina S.A. (Borax Argentina); the estimation and realisation of mineral resources at the Company’s projects; the viability, recoverability and processing of such resources; timing of future exploration of the Company’s projects; timing and receipt of approvals, consents and permits under applicable legislation; trends in Argentina relating to the role of government in the economy (and particularly its role and participation in mining projects); adequacy of financial resources, forecasts relating to the lithium, boron and potash markets; potential operating synergies between the Cauchari Project and the Olaroz Project; the potential processing of brines from the Cauchari Project and the incremental capital cost of such processing, expansion, growth and optimisation of Borax Argentina’s operations; the integration of Borax Argentina’s operations with those of Orocobre and any synergies relating thereto and other matters related to the development of the Company’s projects and the timing of the foregoing matters.

DISCLAIMER (CONT.)

Forward-looking statements are based on current expectations and beliefs and, by their nature, are subject to a number of known and unknown risks and uncertainties that could cause the actual results, performances and achievements to differ materially from any expected future results, performances or achievements expressed or implied by such forward-looking statements, including but not limited to, the risk of further changes in government regulations, policies or legislation; that further funding may be required, but unavailable, for the ongoing development of the Company's projects; fluctuations or decreases in commodity prices; uncertainty in the estimation, economic viability, recoverability and processing of mineral resources; risks associated with development of the Olaroz Project; unexpected capital or operating cost increases; uncertainty of meeting anticipated program milestones at the Olaroz Project or the Company's other projects; risks associated with investment in publicly listed companies, such as the Company; risks associated with general economic conditions; the risk that the historical estimates for Borax Argentina's properties that were prepared by Rio Tinto, Borax Argentina and/or their respective consultants (including the size and grade of the resources) are incorrect in any material respect; the inability to efficiently integrate the operations of Borax Argentina with those of Orocobre; as well as those factors disclosed in the Company's Annual Report for the financial year ended 30 June 2017 and Sustainability Report 2017 available on the ASX website and at www.sedar.com.

No representation, warranty or assurance (express or implied) is given or made by the Company that the forward-looking statements contained in this Presentation are accurate, complete, reliable or adequate or that they will be achieved or prove to be correct.

Subject to any continuing obligation under applicable law or relevant listing rules of the ASX, the Company disclaims any obligation or undertaking to disseminate any updates or revisions to any forward-looking statements in this Presentation to reflect any change in expectations in relation to any forward-looking statements or any change in events, conditions or circumstances on which any such statements are based. Nothing in this Presentation shall under any circumstances create an implication that there has been no change in the affairs of the Company since the date of this Presentation.

US investors should note that while the Company's reserve and resource estimates comply with the JORC Code, they may not comply with Industry Guide 7, which governs disclosures of mineral reserves in registration statements filed with the US Securities and Exchange Commission (SEC). In particular, Industry Guide 7 does not recognise classifications other than proven and probable reserves and, as a result, the SEC generally does not permit mining companies to disclose their mineral resources in SEC filings. You should not assume that quantities reported as "resources" will be converted to reserves under the JORC Code or any other reporting regime or that the Company will be able to legally and economically extract them.

To the maximum extent permitted by law, the Company, the lead manager and their respective related bodies corporate and affiliates, and their respective directors, officers, partners, employees, agents and advisers expressly disclaim all liability (including without limitation, liability for negligence) for any direct or indirect loss or damage which may be suffered by any person in relation to, and take no responsibility for, any information in this Presentation or any error or omission therefrom, and make no representation or warranty, express or implied, as to the currency, accuracy, reliability or completeness of the information contained in this Presentation.

By attending an investor presentation or briefing, or by accepting, accessing or reviewing this Presentation, you acknowledge and agree to the terms set out in this disclaimer.

CAPITAL MARKETS SNAPSHOT

(ASX:ORE, TSX:ORL)

CAPITAL STRUCTURE

(AS AT 12 NOVEMBER 2018)

Shares outstanding 261.4M

Performance Rights and Options Outstanding 1.25M

Cash Balance (30/9/18) US\$308.7M

Share price ASX/TSX A\$4.52/C\$4.12

Market capitalisation A\$1,182 Million
US\$850 Million

52 week share price range (close):

ASX A\$3.16–A\$7.44

SHARE PRICE

SHAREHOLDERS

Toyota Tsusho 15.0%

Executives and Directors ~3.0%

Institutions, Banks and Brokers ~57%

OROCOBRE IS AN ESTABLISHED, PROFITABLE & GROWING LITHIUM PRODUCER DELIVERING RECORD MARGINS TO SHAREHOLDERS

Our profitability profile is growing

Record normalised full year NPAT in FY18 of US\$25.7M, up from US\$13.8M in FY17

A key competitive advantage – and what differentiates us from our peers is our low-cost profile

FY18 gross operating margins of 67% (US\$8,384/tonne) with lithium production costs at US\$4,194/tonne

Orocobre continues to learn and improve

e.g. the weather related experiences of FY18 have been taken into account with the design of Stage 2 (increased pond areas, potential use of crystallisers/evaporators)

Our growth path is clear and fully funded

Multiple growth options with Olaroz Stage 2 and Naraha Lithium Hydroxide both approaching final investment decision (FID), and longer term potential development at Cauchari JV

SOLID YEAR ON YEAR IMPROVEMENT

Record prices and margins, strong cashflow

Sales de Jujuy Joint Venture (Olaroz)

- Production of 2,293 tonnes during September quarter, up 7% on same period last year despite a two week maintenance shut
- September quarter revenue of US\$32 million on sales of 2,144 tonnes
- Record Olaroz sales price in September quarter of **US\$14,699 / tonne FOB¹**
- September quarter cost of sales of US\$4,640 / tonne² and record gross cash margin of **US\$10,059 / tonne**
- Olaroz was again strongly cashflow positive internally funding early works on Stage 2 expansion
- FID for growth projects awaiting finalisation of EPC contract for the Naraha Lithium Hydroxide project

Orocobre

- Orocobre corporate cash balance at 30 September 2018 of US\$308.7 million, and Orocobre Group net cash of US\$221.7 million

Price (US\$/tonne)

Cost of sales (US\$/tonne)

Margin (US\$/tonne)

1. Orocobre reports price as "FOB" (Free On Board) which excludes additional insurance and freight charges included in "CIF" (Cost, Insurance and Freight or delivered to destination port) pricing. The key difference between an FOB and CIF agreement is the point at which responsibility and liability transfer from seller to buyer. With a FOB shipment, this typically occurs when the goods pass the ship's rail at the export port. With a CIF agreement, the seller pays costs and assumes liability until the goods reach the port of destination chosen by the buyer. The Company's pricing is also net of TTC commissions but excludes export taxes. FOB prices are used by the company to provide clarity on the sales revenue that flows back to SDJ, the joint venture company in Argentina

2. Excludes royalties, export taxes and head office costs

STRONG CASHFLOW REDUCING PROJECT DEBT

For personal use only

Olaroz Project Facility (100%)

- ~US\$70M principal of the Project Debt (~37% reduction) repaid by 10 September 2018 and US\$17.1M paid into DSRA
- Project Debt balance reduced to ~US\$122M during September 2018 (US\$105M net of DSRA)
- Project Debt repayments scheduled every six months to September 2024
- Project Debt incurs a low average interest rate of ~4.25%
- Orocobre group net cash was US\$221.7M at 30 September 2018

ACCUMULATED INFLATION vs DEVALUATION

- The Argentine peso (ARS) has devalued approximately 920% from December 2010 through September 2018 and by 43% over the September quarter
- Over recent years devaluation being less than inflation has increased cost pressure on both Olaroz and Borax. The recent devaluation has brought the Peso back in line with long term inflation decreasing cost pressures
- Devaluation also reduces the amount of ARS based balances such as VAT, carry forward tax losses, prepayments and account payables which have an impact in FX
- US\$ versus ARS cash costs are approximately 55/45 at Sales de Jujuy and 40/60 to Borax Argentina

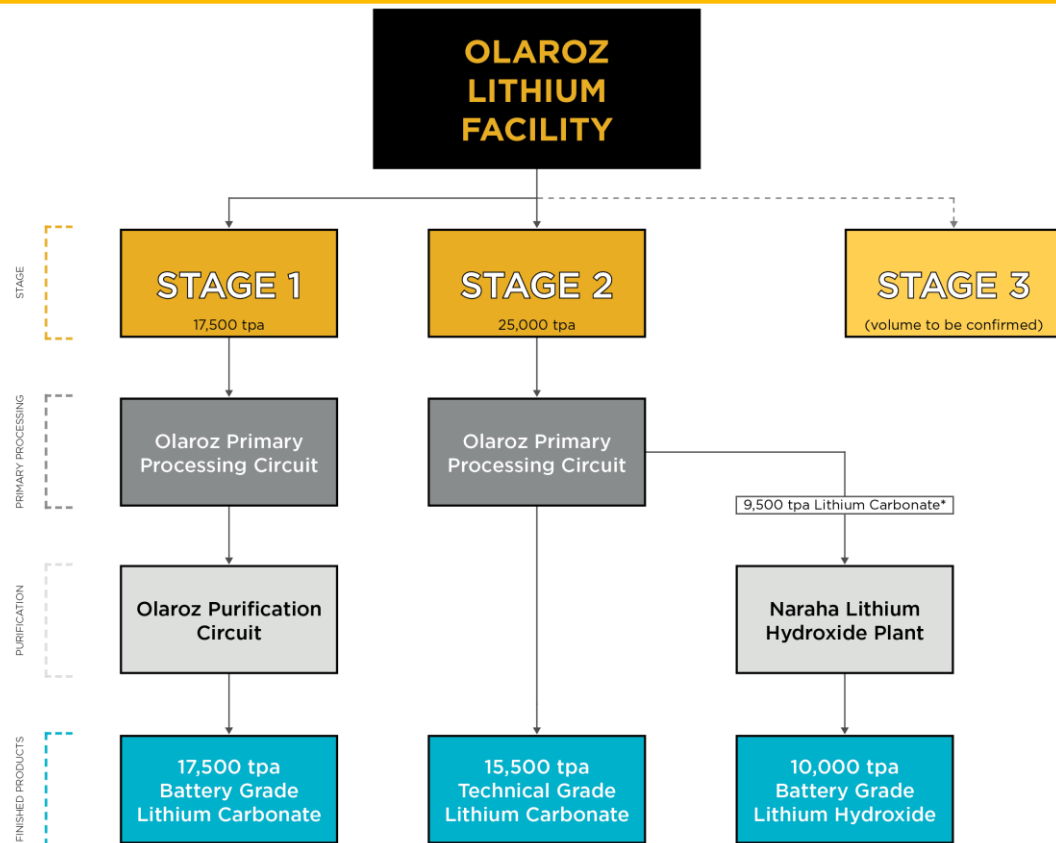

OROCOBRE GROWTH PROJECTS

For personal use only

STAGE 2 DIVERSIFIES PRODUCTION STRATEGY

For personal use only

* 9,500 tpa of Lithium Carbonate will convert to 10,000 tpa Lithium Hydroxide

- Stage 2 (25,000 t LCE*) early works include construction of new roads, new evaporation and harvest ponds, a secondary liming plant, drilling of new bores, and the expansion of existing site infrastructure/camp accommodation
- US\$40 million has been committed prior to FID (total capex remains US\$285 million excluding VAT), as of 30 September 2018 US\$10 million has been spent
- FID expected this quarter subject to TTC completing an EPC contract for the Naraha lithium hydroxide plant allowing for the integrated and concurrent development of both projects, commissioning in 2H CY2020

POND CAPACITY GROWING AHEAD OF PRODUCTION

For personal use only

- Total new pond areas of approximately 9km², increasing pond system to >13km²
- Three new harvest ponds (17A, 17B & 18A) and one new evaporation pond (15B) have been completed as of 16 November
- A further six ponds are currently under construction

Stage 2 capex (US\$285M)

Ponds undergoing salt harvesting

New ponds under construction

New ponds already filled

New ponds under construction

LITHIUM HYDROXIDE PLANT

LITHIUM HYDROXIDE MARKET

- Long-term battery grade hydroxide prices (2017-2030) are forecast to maintain a ~US\$2,500 per tonne premium to battery grade carbonate
- Nickel based cathodes (NMC and NCA formats) are forecast to account for ~80% of the total cathodes market by 2025 up from ~33% in 2017
- Naraha will gain first-mover advantage in Japan with no current or announced hydroxide capacity in the country to date
- A shortfall of approximately 80 ktpa LCE in hydroxide capacity is currently forecast for 2025
- The size of the nickel-based cathode market is forecast to grow from ~80Gwh in 2017 to 816Gwh by 2025

NARAHA

- The LiOH Plant will process Li_2CO_3 from Olaroz and deliver value-added LiOH to customers agreed between Orocobre and Toyota Tsusho
- Estimated capital cost of US\$60-70 million (100% basis, pre-subsidies) for a 10,000 tpa LiOH plant which will deliver premium product at premium pricing
 - Provides product diversification suitable for different battery technologies
 - Ownership to match current Olaroz ownership proportions (excluding JEMSE)
 - Potential for significant margin growth on primary Li_2CO_3 converted to LiOH
- Operating costs estimated to be approximately US\$1,500/tonne, down from initial estimate of US\$2,500/tonne
- Subsidies of approximately US\$27 million have been secured from the Japanese government
- Orocobre and Toyota Tsusho are targeting completion of an EPC contract with Veolia during the December quarter with subsequent FID and commissioning during 2H CY2020

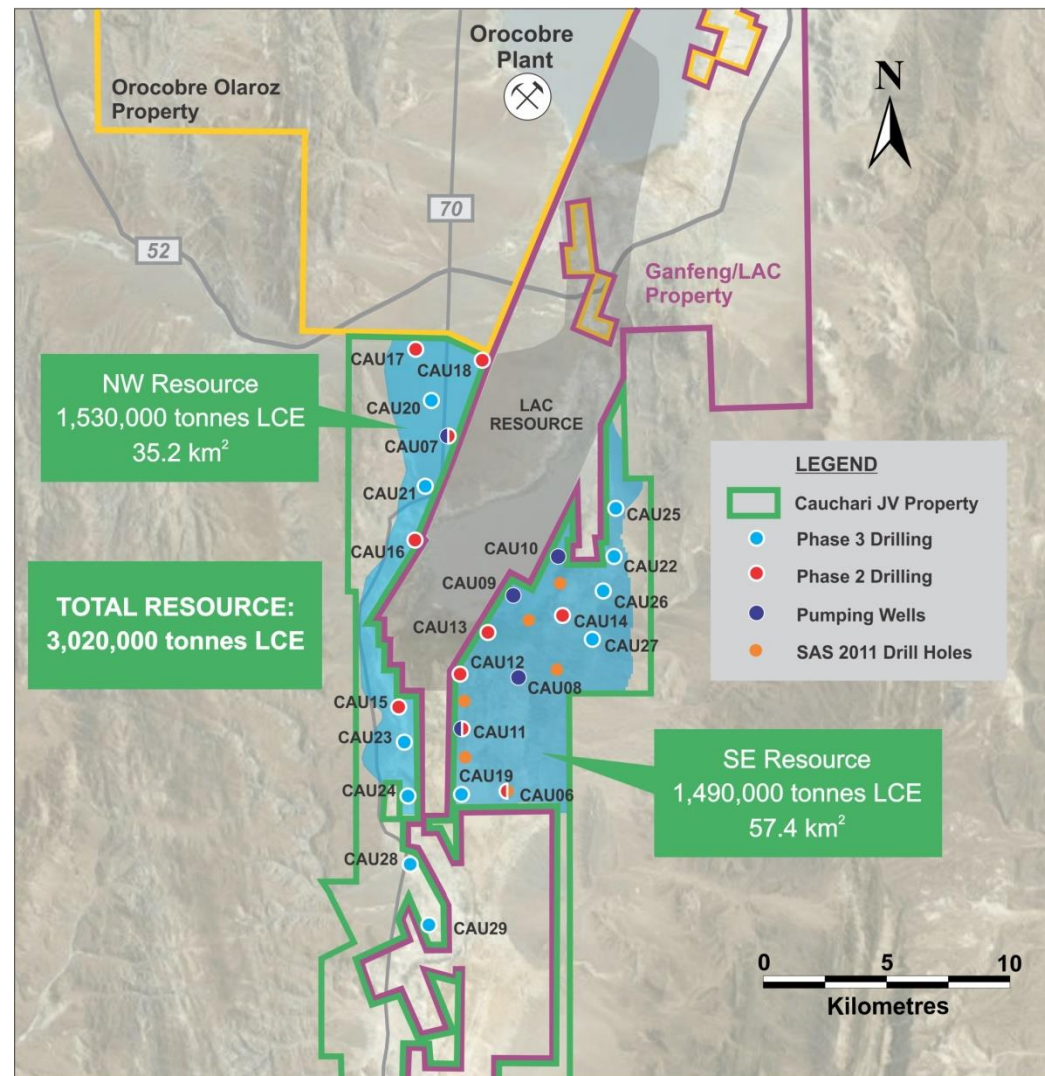

ADVANTAGE LITHIUM / CAUCHARI JV

Advantage Lithium (AAL)

- Orocobre hold ~33.5% of AAL issued shares
- And 25% ownership in the Cauchari project

Cauchari Project (25% ORE, 75% AAL)

- AAL has released a NI43-101 compliant Preliminary Economic Assessment for the Cauchari JV project in accordance with Canadian standards*
- **Inferred resource of 3.02 Mt LCE** at Cauchari at 450 mg/l Lithium
- Orocobre supported AAL's recent private placement taking C\$5 million of shares at C\$0.77 per share. Orocobre now holds 33.5% of Advantage Common Shares
- Phase 3 resource definition drilling program is currently underway at the Cauchari project site to upgrade the resource classification by Q2 2019 to support the project's Definitive Feasibility Study (DFS)
- AAL has completed a detailed project development schedule and budget and is fully funded beyond the completion of the DFS, targeted for completion in 1H 2019

* As Inferred resources were the basis of the subject study there is a low level of geological confidence and no certainty that production targets stated in the study will be realised

MARKETS

For personal use only

WIDESPREAD HISTORICAL UNDER-PERFORMANCE OF RAW MATERIAL SUPPLY & RAMP UP

For personal use only

Expected Capacity (forecast in 2012) of Brine & Hard Rock versus Actual 2017 (LCE tpa)

Historical Industry Average Utilisation Rates for Greenfield projects (production/nameplate capacity)

SUPPLY IMPACTS OF VARYING SCALE, COST & TERM

For personal use only

	Supply Impact	Cost Impact	Longevity of market impact
1. A) Increased Royalties & Taxes in Chile	↓ Discourages new Chilean entry	↑ Increases costs by ~50%	Indefinite 
1. B) Chilean regulators – Chilean supplier contract risks	↓ Risk to Chilean supplier’s freedom to operate due to extensive approvals process for environmental permits, sales & production quotas	↑ Preferential pricing and supply allocation to Chilean customers unsustainable	Indefinite 
2. Under-delivery in conversion plant capacity expansions	↓ New hard rock supply has not been met by sufficient conversion capacity reducing the impact of new projects		Converter project timeline guidance 1-2 years versus reality >4 years 
3. Under-delivery of brownfield brine expansions continues	↓ Carbonate expansion delays experienced by all key existing brine suppliers SQM, Albemarle, FMC, Orocobre & future projects	↑ Higher cost per unit due to delayed scaling	Varying delays from >2 years are expected in reaching initial guidance 
4. New hard rock supply at grades below feasibility study	↓ Delays to product optimisation projects & slower ramp up to meet grade requirements, lower recoveries	↑ Higher cost of production for converters using lower grade feedstock	Delays of ~2 years in reaching nameplate for new producers (2017 new hard rock supply) 
5. Implementation of new Argentinian export tax	↓ Discourages new entry for Argentinian projects while tax is in place (2018 to 2020)	↑ Increases costs by ~25% for existing Argentinian producers	Argentina’s Government advise the tax will be in place until 2020 (2 years) 

THE CASE FOR A SPECIALISED COST CURVE

Standard Cost Curve Methodology

Exclude Taxes & Royalties: Doesn't account for growing impact of government royalties and taxes on lithium industry

Consolidated Carbonate & Hydroxide: No distinction between Carbonate & Hydroxide costs

Hard Rock costs represented: Concentrate costs calculated from hard rock mine's production costs using a standardised conversion formula

Capacity plotted on horizontal axis: Capacity claims of brine and hard rock producers used

Source Data: borrowed from 3rd party sources without testing feasibility of data

Orocobre Cost Curve Methodology

Includes Taxes & Royalties: Accounts for Chilean royalties (by product), Argentina export taxes & royalties

Product Specific: Split between Carbonate & Hydroxide accounting for differing processing routes of feed i.e. hard rock or brine, grade of feedstock

Converted Costs represented: Hard Rock costs calculated using selling price of concentrate for independent players while integrated converters use feedstock cost of production. Considers reported concentrate grades & capabilities of converters

Supply plotted on horizontal axis: Orocobre's 2018 supply forecast integrated into the cost curve, reflecting actual supply & feasible utilisation rates rather than producer capacity claims

Source Data: a range of data points consulted including reported financials, prospectus', export/import data & independent research to form a balanced, accurate view with consistent methodology

CARBONATE COST CURVES PRE / POST TAXES & ROYALTIES

Carbonate Cost Curve, Pre-Taxes & Royalties (USD/t)

Carbonate Cost Curve, Post-Taxes & Royalties (USD/t)

Sources & Methodology Notes: Company financial statements & results H1 CY 2018, Company Prospectus, Independent research, Export/Import Data

Converters: * Includes ALB tolling business, excludes 10-15ktpa LCE supply of technical product from Greenbushes. ALB tolling includes a US\$1500/t tolling fee. Integrated Conversion Plant operators' costs calculated on the basis of cost of production of feedstock. Freight & Port Charges standardised across all hard rock producers and converters. Independent converters calculated using CIF selling price of concentrate in CY2018 & H2 guidance. Processing & Feedstock Conversion costs based upon grade/tonnes of concentrate required per tonne of LCE & LiOH. 1t of LCE = 1.1t of LiOH. 10% mineral losses during conversion. WA royalties included.

Brine: Scaling royalties for Chilean producers use a normalised price of US\$13,500/t LCE to reduce impact of transfer pricing. Orocobre cost of production based upon FY18 H2. FMC volume excluded as marginal tonnes of carbonate are sold; assume majority used for feedstock to hydroxide, butyl lithium and other specialty products. Argentine royalties & export tax included in Orocobre post-tax. Chinese brine costs have been marginally costed across other products e.g. potash. SQM COP calculated using Y2018 H1'18 COGS with assumption of carbonate % of COGS.

HYDROXIDE COST CURVES PRE / POST TAXES & ROYALTIES

For personal use only

Hydroxide Cost Curve, Pre-Taxes & Royalties

Hydroxide Cost Curve, Post-Taxes & Royalties

Sources & Methodology Notes: Company financial statements & results H1 CY 2018, Company Prospectus, Independent research, Export/Import Data

Converters: * Includes ALB tolling business, excludes 10-15ktpa LCE supply of technical product from Greenbushes. ALB tolling includes a US\$1500/t tolling fee. Integrated Conversion Plant operators' costs calculated on the bases of cost of production of feedstock. Independent converters calculated using selling price of concentrate in CY2018 H1 and advice for H2. Processing & Feedstock Conversion costs based upon grade/tonnes of concentrate required per tonne of LCE & LiOH. 1t of LCE = 1.1t of LiOH. 10% mineral losses during conversion. WA royalties included.

Brine: FMC royalties & export tax calculated based on transfer pricing of carbonate as hydroxide facilities are located outside Argentina. ALB, FMC & ORE COP calculated using carbonate feedstock COP plus processing cost. Orocobre COP uses stage 2 carbonate COP plus conversion cost and excluding Argentine export tax as operation commences when export tax has been removed. ALB royalties accounted for by carbonate feedstock as no hydroxide facility in Chile. SQM royalties based upon the average selling price of hydroxide during CY2018 H1. SQM COGS calculated using CY2018 H1 results with assumption regarding % contribution to COGS. Chinese brine producers have no hydroxide processing facilities.

PERSISTING BOTTLENECKS, SLOWER RAMP-UPS & HIGHER COSTS UNDERPINS CONTINUED TIGHT MARKET CONDITIONS

For personal use only

Orocobre Forecasted Lithium Market Supply & Demand (t LCE)

SUMMARY

Strong position as a low cost, high margin producer with Olaroz EBITDAIX US\$94.6M in FY18

FY19 production to be higher than FY18

Growth projects fully funded:

- Olaroz expanding to 42,500 tpa, work underway
- 10,000 tpa lithium hydroxide plant to be built in Japan
- FIDs expected this quarter with finalisation of EPC contract for the Naraha lithium hydroxide plant

Both projects to be commissioning in 2H CY2020

Long term lithium market fundamentals remain strong

Further staged expansions to grow Olaroz production into the future – Stage 3 and beyond

Borax showing improved results

MEETING RESULTS
