## LiveTiles and Starmind to Deliver World's First AI "Organisation Brain"

- Strategic partnership with Swiss AI company Starmind delivers additional AI and machine learning capabilities to LiveTiles' existing technology
- The integration of both parties' technologies will deliver an AI and machine learning based solution to improve speed and efficiency of knowledge sharing in organisations
- Significantly enhancing LiveTiles' existing product offering, the solution connects an enterprise's employees via "Organisation Brain" solution and "Ask the Expert" AI Bot
- The "Organisation Brain" solution enhances LiveTiles' existing product offering, built on Microsoft's Office 365 and SharePoint platforms
- The solution is expected to be met with strong interest from new and existing customers and to contribute to strong subscription revenue growth in FY19 and beyond

**LiveTiles Limited (ASX:LVT) (LiveTiles or the Company)**, a global software company that empowers its users to create their own intelligent workplace experiences, is pleased to announce its new strategic partnership with Swiss AI (Artificial Intelligence) neuroscience company, Starmind. Together LiveTiles and Starmind will deliver a world first AI solution that maps human expertise and information to create an "Organisation Brain".

This partnership will deliver the latest enhancement in the evolution of LiveTiles' Intelligent Workplace vision and roadmap.

The solution applies AI and self-learning algorithms based on neuroscientific principles to empower organisations to access information across their digital workplace platforms. Employees ask questions via the "Ask the Expert" dialogue box which then processes and analyses that request in seconds. The technology immediately links those requesting the information with the most relevant data source, portal or qualified employee in the organisation. The technology works from any device and is well suited to global and remote teams. In this way, internal content can be rapidly unlocked, shared and leveraged.

The volume of information spread across a workplace is complex with data living in disparate portals, platforms and employees' minds. This solution will capture, consolidate and surface this information dynamically, increasing employee efficiency, collaboration and knowledge sharing.

LiveTiles and Starmind will market their joint solution into enterprise Microsoft accounts globally. With Microsoft boasting over 400,000 customer organisations and over 85% of Fortune 500 companies leveraging SharePoint Online as part of their Office 365 subscription, the addressable market for this solution is large. The target market will be global companies with remote teams, large workforces and substantial volumes of data.

The solution further enhances LiveTiles' Intelligent Workplace solution and is expected to be met with strong interest from new and existing customers, contributing to strong growth in recurring revenues in FY19 and beyond.

**Oliver Muhr, CEO, Starmind, said:** "Our new strategic partnership with LiveTiles is the perfect alignment between two tech leaders who are dedicated to bringing impactful AI to the workplace. Starmind technology fits seamlessly in LiveTiles' Intelligent Workplace solution. The market opportunity and demand for our joint solution is huge, and together we will help organisations access their valuable information and knowledge through their own unique "Organisation Brain". Together with LiveTiles we give organisations control and a view of their unique IP. Information is power, and the future economy demands organisations leverage it intelligently."

**Karl Redenbach, CEO, LiveTiles, said:** "Starmind is a unique piece of AI technology that addresses the new workplace problem of information overload – specifically when it comes to finding the right information in a business quickly. Intelligent organisations need intelligent solutions to seamlessly find information and share knowledge across their employee network. Our new partnership and technology alliance with Starmind introduces a key feature in our Intelligent Workplace solution. We can now offer customers the power to find, access and share information in their business unlike anything else in the market."
