

8 April 2019

Genetic Technologies Limited (ASX: GTG; Nasdaq: GENE)

Memorandum Of Understanding (MoU) signed between GTG and The Translational Genomics Research Institute (TGen) of Phoenix, Arizona USA.

Genetic Technologies Limited (“Company”), a provider of world-leading genetic risk assessment test products is pleased to announce that it has now established an MoU with TGen. TGen is an Arizona-based, non-profit biomedical research institute dedicated to conducting ground-breaking research with life-changing results.

TGen works to unravel the genetic components of common and complex diseases, including cancer, neurological disorders, infectious disease, and rare childhood disorders. TGen is affiliated with City of Hope in Duarte, California, a world-renowned independent research and treatment center for cancer, diabetes and other life-threatening diseases

Key Features of this MoU between GTG and TGen:-

- GTG and TGen will cooperate in the development of a commercialisation strategy and infrastructure development for a suite of polygenic risk tests to be made available in the US market; and
- Establish any fund-raising mechanisms to achieve the above.

ASX and NASDAQ Market Announcement and Media Release

The terms of the Agreement are confidential, however key features include that GTG and TGen will cooperate in the development of a commercialisation strategy and infrastructure development for a suite of polygenic risk tests to be made available in the US market and establish any fund-raising mechanisms to achieve the above.

The infrastructure development will include the establishment of a co-managed US-based CLIA Laboratory and provision of the new test portfolio to a major US Health Provider.

In order to achieve these initial goals, GTG and TGen will collaborate on a number of matters. The first priority will be to establish a US-based CLIA laboratory. This will involve, *inter alia*, defining the legal and corporate structure of the collaboration. It will also involve the transfer of GTG's know-how in this area.

Genetic Technologies' Chairman Dr Paul Kasian said "we are excited to be working with such a prestigious organisation as TGen in bringing our current and developing future polygenic risk tests to the US market"

The US based laboratory will offer GTG's existing and future tests. This will include oncology polygenic risk tests for breast cancer, colorectal cancer, prostate cancer and melanoma. Other tests will also be considered over time. The non-oncology tests to be offered will include cardiovascular disease and diabetes.

"The portfolio of polygenic risk tests developed by GTG opens a new pathway for helping individuals make informed decisions when it comes to improved personal health and prevention," said David Duggan, Ph.D., associate professor of TGen. "We look forward to working with GTG to expand these opportunities in the US market."
