

ASX RELEASE

25 July 2019

Drilling Contract Award — Eastman Project

Peako Limited (ASX: PKO) is pleased to advise that it has awarded a contract for drilling services at its Eastman Project to Strike Drilling Pty Ltd. The rig is currently working elsewhere in north Western Australia and is expected to be mobilised to the Eastman Project in August 2019.

Peako has designed a 1,800m RC drilling program to test compelling geophysical targets identified via induced polarisation (IP) survey at the Eastman and Landrigan VHMS prospects and is supported of a \$150,000 Environment Incentive Scheme drilling grant from the Western Australian government¹.

Peako's East Kimberley copper exploration strategy focusses on VHMS (volcanic hosted massive sulphide) deposits in order to leverage from an impending global copper supply shortfall. Globally, VHMS deposits present a powerful value proposition; median grades of 1.75% copper and median tonnages of 2.5 million Mt² copper underpin the potential for rapid discovery-development timelines and high returns offered by this deposit style.

In September 2018 Peako commissioned an Induced Polarisation (IP) survey program over its Eastman and Landrigan prospects where sparse and sporadic historic exploration, primarily guided by surface gossans and geochemical anomalies, has revealed known VHMS mineralisation, including:

Eastman: 12m @ 3.2% Cu, 5.7% Zn, 1.86% Pb, 26.5 g/t Ag & 0.41g/t Au³

Landrigan: 9.6m @ 2.7% Cu, 1.5% Zn, 0.3% Pb, 12.6 g/t Ag and 1.5 g/t Au¹

The IP surveys successfully detected the known mineralisation at each of Eastman and Landrigan, thus validating the geophysical method and, significantly, identified blind geophysical targets at each prospect along strike of known mineralisation.

Peako Chairman Mr Geoff Albers commented "We are delighted to have been able to secure a rig from Strike Drilling and excited to commence our maiden drilling program".
