

HeraBEAT and HeraCARE now operational across multiple Hapvida sites

- HeraBEAT monitor and cloud based pregnancy monitoring platform customised HeraCARE PRO platform operational across multiple Hapvida hospitals and clinics
- Uptake from medical professionals being witnessed across multiple locations - patient data being uploaded and shared between HeraBEAT and HeraCARE PRO platform daily (see image one and two below)
- Pilot trial validates solution scalability and potential - HeraMED to provide updates as trial progresses
- HeraMED continues discussions with Hapvida medical professionals regarding feedback and trial initiatives

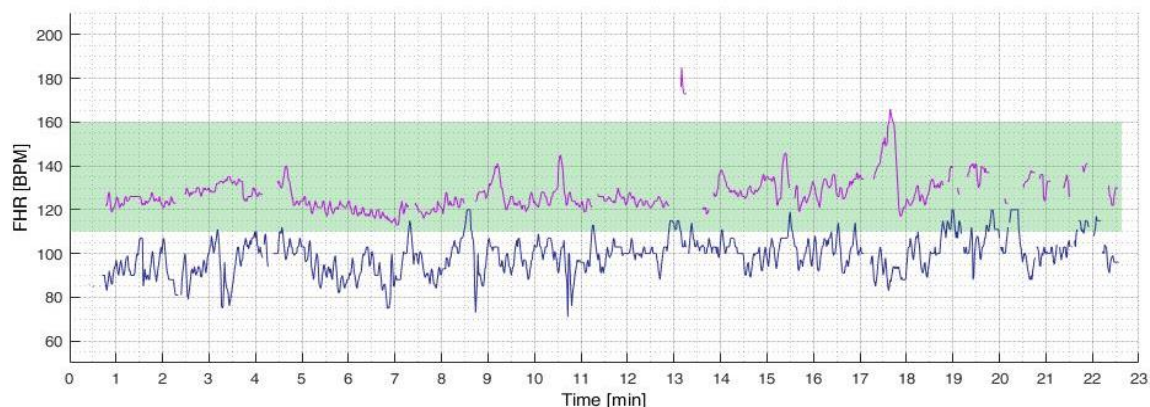

Medical technology company, **HeraMED Limited (ASX:HMD)** (“HeraMED” or the “Company”) is pleased to provide an update on the trial of its smart medical grade foetal heart rate monitor HeraBEAT, and its cloud based SaaS pregnancy monitoring platform HeraCARE PRO, with one of Brazil’s largest healthcare providers Hapvida Saude (Hapvida).

Following the successful integration of HeraCARE PRO into Hapvida’s IT systems (refer ASX announcement: 1 July 2019), HeraMED advises that its HeraBEAT devices and the Company’s HeraCARE PRO platform are now operational at multiple locations and being utilised by medical professionals and patients as part of a broader pilot trial.

Hapvida is one of Brazil’s largest healthcare providers and medical insurance companies. The group services over 6.5 million customers annually, through a network of over 100 hospitals and 1,000 clinics across 11 states.

HeraMED is now witnessing seamless data upload and sharing between the operational HeraBEAT monitors and the customised HeraCARE PRO platform from Hapvida. This development outlines the potential scalability of both solutions and further validates the Company’s potential with large scale medical organisations.

Both Hapvida and HeraMED remain in ongoing discussions regarding ongoing platform updates and optimisation. Both parties will aim to utilise the solutions during the intrapartum phase of pregnancy, which is the period spanning childbirth, from the onset of labour. Should this be successful, it will provide even greater value to the platform and potentially underpin increased uptake.

HeraMED will remain in ongoing discussions with Hapvida’s medical professionals to gather feedback on the HeraBEAT device and HeraCARE solution. The Company will update shareholders as developments associated with the trial progress.

CEO and Cofounder Mr David Groberman said: “Having multiple HeraBEAT monitors and HeraCARE subscriptions deployed and operational across Hapvida’s network marks a significant achievement for HeraMED.

“The broader pilot trial with Hapvida will utilise HeraCARE PRO and HeraBEAT to provide a cost-effective and more accurate pregnancy monitoring offering to patients and medical professionals in Brazil.

“Management will continue its dialogue with Hapvida and its teams of medical professionals on the status of the trial and endeavour to update shareholders as developments progress.”
