

Shares to be Released from Escrow – Founders Agree to Extension

Titomic Founders agree to a further escrow commitment for their shares

Melbourne, Australia 10th September 2019: Titomic Limited (ASX: TTT) (“Titomic” or “Company”), the Australian digital manufacturing solutions company, advises that 58,409,882 ordinary fully paid shares currently subject to a two-year compulsory escrow period will be released from escrow restriction on 21st September 2019. These shares are held by the founders of Titomic and the Company’s IPO broker, PAC Partners and their associates.

The Company is pleased to announce that the founders will not sell any equity holdings they own or control (directly or indirectly) being released from escrow unless to help facilitate a future major investment in the Company by a key strategic investor, or as part of a managed market distribution process.

Titomic has mandated PAC Partners to assist with the administration and management of the escrowed shares.

Titomic Managing Director, Jeff Lang, commented:

“Following Titomic’s two-year anniversary of its official listing on the ASX in September 2017, the Board, executive team and operational staff have worked tirelessly to establish the company as the global leader in industrial scale metal additive manufacturing.

The successful commercialisation of the CSIRO patented technology by Titomic has seen exponential growth opportunities for the application of this technology across multiple industry sectors, the establishment of the TKF Melbourne Bureau, and three different TKF systems that include the world’s largest metal 3D printer.

I’m proud and privileged to lead an expert team that is completely committed to the growth and development of the company with an expectation to see substantial revenue realised in the near-term and beyond.”

About Titomic Limited:

Titomic Limited (ASX:TTT) is an Australian public company specialising in digital manufacturing solutions for industrial scale metal additive manufacturing using its patented Titomic Kinetic Fusion® (TKF) technology. The TKF technology provides unique capabilities for producing commercially viable additively manufactured metal products competing directly with traditional manufacturing methods. Titomic provides OEM production and R&D services from their TKF Smart Production Bureaus to the global Aerospace, Defence, Shipbuilding, Oil & Gas, Mining and Automotive industries. Titomic also provides an extensive range of metal powders for 3D Printing especially Titanium and super alloys whilst providing sales and support services for their TKF production systems.
