RC DRILLING RIG BACK AT KAT GAP

Highlights:

- Up to 3500m of RC drilling underway at Kat Gap after highly successful campaigns in November 2019 and January 2020;
- Hole depths ranging from 40m to 170m;
- Assay results expected mid-March;
- RC Drilling program designed to follow-up deeper down-plunge high-grade mineralisation on the granite-greenstone contact over a 200m strike adjacent to the cross-cutting Proterozoic dyke previously tested by the Company;
- RC Drilling also testing 200m along strike south of the cross-cutting Proterozoic dyke plus a further 150m north of current drill coverage bringing the overall potential strike length of the Kat Gap system to over 800m;
- Understanding the down-plunge orientation of high-grade gold mineralisation will aid significantly in the planning of further RC drill holes on the south side of the Proterozoic dyke;
- Previous RC drilling by Classic at Kat Gap has returned outstanding high-grade gold intercepts from shallow depths including:

Classic CEO Dean Goodwin said:

We are excited to be back at Kat Gap to undertake more follow up drilling so soon after the great results of our last two drilling programs, including **multiple high-grade gold hits close to the surface, extensions at depth down plunge and along strike south of the dyke**. This round will be focused solely on Kat Gap which has delivered outstanding results from the previous 8 drill campaigns. Drilling will again focus on the main granite – greenstone contact of which **only 500m of a total 3.5km of potential strike has been tested** by the Company.

We are planning to drill down plunge of recent high-grade gold intercepts along a 200m section north of the cross-cutting Proterozoic dyke in an attempt to increase the width and strike length of this gentle northerly pitching shoot. RC drilling will also be carried out **south of the dyke for around 200m and north along strike for 150m**. The south side of the dyke has received very little attention to date. The program is designed to probe between 40m and 170m below surface.

INTRODUCTION

WA-focused gold exploration and development company Classic Minerals Limited (ASX: CLZ) ("Classic", or "the Company") is pleased to announce that it has recommenced RC drilling at its 100% owned Kat Gap Gold Project covering exploration licences E74/422 and E74/467.

I. PREVIOUS RC DRILLING AT KAT GAP BY CLASSIC

Classic has completed 8 separate drilling campaigns at Kat Gap prior to the most recent RC drilling program. **A total of 143 holes for 11,044m** was completed between May 2018 and January 2020 **all returning significant high-grade gold intercepts**. The majority of the drilling is relatively shallow, down to approximately 60m vertical depth below surface and covered **a strike length of the granite – greenstone contact of approximately 500m**. The main area of drilling has been focused primarily on and adjacent to both contacts of a cross-cutting Proterozoic dyke where it intersects the main granite-greenstone contact. At this location the gold mineralisation has been significantly enriched. Better results from the first six drilling programs include:

ABOUT THE FORRESTANIA GOLD PROJECT

The FGP Tenements (excluding Kat Gap) are registered in the name of Reed Exploration Pty Ltd, a wholly owned subsidiary of ASX listed Hannans Ltd (ASX:HNR). Classic has acquired 80% of the gold rights on the FGP Tenements from a third party, whilst Hannans has maintained its 20% interest in the gold rights. For the avoidance of doubt Classic Ltd owns a 100% interest in the gold rights on the Kat Gap Tenements and also non-gold rights including but not limited to nickel, lithium and other metals.

The FGP contains an existing Mineral Resource of 7.27 Mt at 1.33 g/t for 311,050 ounces of gold, classified and reported in accordance with the JORC Code (2012), with a recent Scoping Study (see ASX Announcement released 2nd May 2017) suggesting both the technical and financial viability of the project. The current post-mining Mineral Resource for Lady Ada and Lady Magdalene is tabulated below.

Additional technical detail on the Mineral Resource estimation is provided, further in the text below and in the JORC Table I as attached to ASX announcements dated 18th December 2019 and 21st January 2020.

Prospect	Indicated			Inferred			Total		
	Tonnes	Grade (Au g/t)	Ounces	Tonnes	Grade (Au g/t)	Ounces Au	Tonnes	Grade (au)	Ounces
Lady Ada	257,300	2.01	16,600	1,090,800	1.23	43,100	1,348,100	1.37	59,700
Lady Magdalene				5,922,700	1.32	251,350	5,922,700	1.32	251,350
Total	257,300	2.01	16,600	7,013,500	1.31	294,450	7,270,800	1.33	311,050

Notes:

1. The Mineral Resource is classified in accordance with JORC, 2012 edition
2. The effective date of the mineral resource estimate is 21 January 2020.
3. The mineral resource is contained within FGP tenements
4. Estimates are rounded to reflect the level of confidence in these resources at the present time.
5. The mineral resource is reported at 0.5 g/t Au cut-off grade
6. Depletion of the resource from historic open pit mining has been considered
